**Natural History** John Wiley & Sons

This book analyzes the complex interactions of body, mind and microelectronic technologies.

Internationally renowned scholars look into the nature of the mind - a combination of thought, perception, emotion, will and imagination - as well as the ever-increasing impact and complexity of microelectronic technologies.

Over the last several decades, scholars and practitioners have progressively acknowledged that we cannot consider cities as the place where nature stops anymore, resulting in urban environments being increasingly appreciated and theorized as hybrids

between nature and culture, entities made of socio-ecological processes in constant transformation. Spanning the fields of political ecology, environmental studies, and sociology, this new direction in urban theory emerged in concert with global concern for sustainability and environmental justice. This volume explores the notion that connecting with nature holds the key to a more progressive and liberatory politics.

### Chapters

This chapter introduces the concept of ecosystem services in agriculture by classifying and comparing different types of farming. It distinguishes fossil-fuel-based and ecosystem-based systems. Agroecology and integrated farming are two ecosystem-based systems. Their principles and characteristics are defined. Their implementation often requires a recapitalization of ecosystems in soil organic matter and ecological infrastructures. As scientific activities, they are often involved in action and based on a holistic and participatory approach with pilot farms. Examples of this type of research activities are

presented. Changes are needed in Belgian and European agricultural systems notably because they are based on massive use of fossil fuels and imports of animal feed from other continents. In addition to expected price increases of these inputs, a self-sufficiency rate is desirable. Intensive systems also have a negative impact on the environment. Policy options are proposed for implementing a fast transition to more agroecological systems.

### Paleogene Shallow Benthos of the Tethys, 1 Založba ZRC

La production de truffières sauvages, comme celle des truffières implantées, a considérablement diminué depuis le début du siècle. Selon les auteurs, ce phénomène est lié à la dégradation

biologique du milieu et en particulier à la disparition progressive de la faune du sol, indispensable pour décompacter et aérer le sol. A partir de l'analyse détaillée de truffières pilotes et d'études de laboratoire utilisant les méthodes les plus modernes, l'importance du facteur sol est réellement mise en évidence. L'ouvrage s'adresse aux enseignants et chercheurs en science du sol et en biologie, mais aussi aux trufficulteurs et à toute personne curieuse de mieux connaître ce mystérieux champignon.

International Catalogue of Scientific Literature Rowman & Littlefield

An examination of ancient and contemporary submarine landslides and their impact Landslides are common in every subaqueous geodynamic context, from passive and active continental

margins to oceanic and continental intraplate settings. They pose significant threats to both offshore and coastal areas due to their frequency, dimensions, and terminal velocity, capacity to travel great distances, and ability to generate potentially destructive tsunamis. Submarine Landslides: Subaqueous Mass Transport Deposits from Outcrops to Seismic Profiles examines the mechanisms, characteristics, and impacts of submarine landslides. Volume highlights include: Use of different methodological approaches, from geophysics to field-based geology Data on submarine landslide deposits at various scales Worldwide collection of case studies from on- and off-shore Potential risks to human society and infrastructure

Impacts on the hydrosphere,  
atmosphere, and lithosphere

Dictionnaire étymologique des noms de  
lieu de la Savoie Editions Quae

Voici le neuvième album français de  
cette collection dédiée aux grands  
massifs de l'arc alpin. Le massif des  
Bauges a cette particularité de voir  
l'activité humaine se développer en  
harmonie sur un haut plateau, au-dessus  
des grandes bourgades alpines que sont  
Annecy, Chambéry, Alberville et Aix-les-  
bains. Le recul et le temps nécessaires  
pour vivre sa vie sont les principales  
caractéristiques qu'ont rencontrées les  
auteurs de cet ouvrage, préfacé par  
Jean-Paul Zuanon, longtemps rédacteur  
en chef de la revue du Club Alpin  
Français : la Montagne et Alpinisme. Le  
parc naturel régional du Massif des

Bauges apporte également son soutien à  
cette publication.

Recently, UNESCO has gradually started  
to recognize world geoparks ? territorial  
spaces with a geological heritage of  
international importance. This  
classification presents real challenges.  
Development strategies must align with  
the recommendations advocated by  
various non-governmental organizations.  
It is also necessary to involve the local  
actors, both in the preparation of  
application forms and in the  
implementation of a management plan  
that is suitable for sustainable global  
development. Managing the tensions  
and asymmetries that exist between the  
different groups of actors (politicians,

managers, scientists, representatives of local populations) constitutes another major issue. It is in this context and through various case studies that this book questions the aims of the UNESCO global geoparks ? in terms of heritage inventory and conservation, the participation of local populations, the local development of a territory and its enhancement through heritage interpretation.

It's everywhere, and it's telling entire generations of people how to travel the world.' □ Fairfax Media (Australia)

### Landscapes and Landforms of France

Lonely Planet

The Landforms and Landscapes of France provides an informative and attractive overview of the most scenic

landscapes of France. The geodiversity of France is emphasized, for example the glacial landscapes of the Mont-Blanc Massif, the volcanoes of the French Massif Central, the chalk cliffs and sand dunes of the Atlantic coast, the granitic landscapes of Corsica or the lagoons and coral reefs of French Polynesia. The objectives are to provide the reader with an enjoyable and informative description of the selected sites within their regional geographical and geological settings; to offer an up-to-date survey of the evolution of France's landscape; and to give additional information on the cultural value of the selected sites wherever appropriate (prehistoric paintings, legends related to sites, famous vineyards, etc.). The book is a richly illustrated reference work that

makes accessible for the first time a wealth of information currently scattered among many national and regional journals. It will be of benefit to earth scientists, environmental scientists, tourism geographers and conservationists

**UNESCO Global Geoparks** Routledge  
Seznam literature o paleogenskih velikih foraminiferah, ki ga je v glavnem sestavil Johannes S. Pignatti, je zelo izčrpen seznam referenc o stratigrafiji, paleoekologiji, morfologiji in taksonomiji paleogenskih velikih foraminifer. Tovrstna literatura seže prav na začetek geološke znanosti in je mnogokrat raztresena v težko dostopnih in manj znanih publikacijah. Sedaj je ta velika količina podatkov, ki bi sicer ostali znani samo redkim specialistom, postala

dostopna širši javnosti. Predstavlja nepogrešljivo orodje za vsakogar, ki se ukvarja s katerikoli področjem geologije in paleontologije paleogena. Kamnine s paleogenskimi velikimi foraminiferami tvorijo marsikje pomembne kolektorje za nafto ali pa so v njih nahajališča drugih gospodarsko pomembnih surovin. Pričujoči seznam bo tako dobrodošel ne le akademskim raziskovalcem, temveč tudi tistim, ki se v praksi ukvarjajo z izkoriščanjem naravnih bogastev.

La Savoie Lonely Planet

Strain Patterns in Rocks is a selection of papers presented at the international workshop, held in Rennes on May 13-14, 1982. The book presents papers on the techniques of strain measurement; an orthographic analysis of deformation;

and the applications of the Mohr circle to inhomogeneous deformation. The text also includes papers on the methods of strain removal; a general transformation to simulate heterogeneous strain states; the significance of isotropic points; and the detection of volume changes. Papers on the analyses of strain discontinuity at interfaces; strain refraction through contrasting layers; and strain patterns in ductile shear zones and at the tips to shear and thrust zones are also considered. The book further includes papers on the natural strain patterns: in mylonite zones, in granites, in Alpine nappes, in linearly anisotropic rocks, in an ice cap and in a boudin model.

The concept of 'natural heritage' has become increasingly significant with the threat of dwindling resources, environmental degradation and climatic change. As humanity's impact on the condition of life on earth has become more prominent, a discernible shift in the relationship between western society and the environment has taken place. This is reflective of wider historical processes which reveal a constantly changing association between humanity's definition and perception of what 'nature' constitutes or what can be defined as 'natural'. From the ornate

collections of specimens which formed the basis of a distinct concept of 'nature' emerging during the Enlightenment, this definition and the wider relationship between humanity and natural history have reflected issues of identity, place and politics in the modern era. This book examines this process and focuses on the ideas, values and agendas that have defined the representation and reception of the history of the natural world, including geology and palaeontology, within contemporary society, addressing how the heritage of natural history, whether through museums, parks, tourist sites or popular culture is used to shape social, political, cultural and moral identities. It will be of interest to scholars and practitioners within heritage studies, public history, ecology, environmental

studies and geography.

What factors contribute to tourism and recreation development? How can we characterise stakeholder rationales and organisation modes to enhance tourism resources and foster tourism and recreation services? To what extent do

tourism and recreation contribute to regional development? What changes are taking place in terms of new destinations, stakeholders, policy objectives? Bringing together scholars from the fields of planning, economics, sociology, management studies and geography, this book examines cross-cutting issues in tourism and recreation with the aim of developing an extended view of leisure time. Focusing mainly on France with comparison to the experience of Northern and Southern European countries and North America, it combines a diverse range of case studies to address issues such as contrasting rural dynamics, changing public policies, sustainable development imperatives, evolving user behaviour and increasingly diverse recreation

activities and stakeholder organisation. Specific topics are highlighted, such as the role of social capital or culture as factors of recreation development; resort organisation from international and experience-based perspectives; and the usefulness of the capability approach to evaluate tourism impacts on local development. Emphasising policy recommendations to help public or collective action on the issues and presenting emerging trends in the field, this book should be of interest to students, scholars and stakeholders in tourism/recreation planning and management.

**Strain Patterns in Rocks** La Fontaine de Siloë

The Rough Guide Snapshot to the Alps and the Franche-Comté is the ultimate

travel guide to this rugged, mountainous region in the southeast of France. It guides you through the area with reliable information and comprehensive coverage of all the sights, attractions and sporting activities, from hitting the slopes in some of the world's most famous ski resorts and chilling out in laidback Annecy with its gorgeous lakeside setting to hiking the highest Alpine peaks during the summer months and rocking out at the relaxed Eurockéennes festival. Detailed maps and up-to-date listings pinpoint the best cafés, restaurants, hotels, shops, bars and nightlife, ensuring you have the most memorable possible, whether passing through, staying for the weekend or longer. Also included is the Basics section from The Rough Guide to

France, with all the practical information you need for travelling in and around the country, including transport, food, drink, costs, health and festivals. Also published as part of The Rough Guide to France. Full coverage: Grenoble, Chartreuse massif, Briançon, Parc National des Écrins, Gap, Chambéry, Les Trois Vallées, Annecy, Mont Blanc, Chamonix, Lake Geneva, Besançon, Lons-le-Saunier, Région des Lacs, Belfort (Equivalent printed page extent 94 pages).
