In this way, students learn to place themselves in the role of decision-maker and envision how they might respond to problems and situations that will arise in their future careers. This Fifth Edition boasts expanded coverage of valuation concepts, more quantitative material, and a streamlined, finance-focused presentation. A careful examination of conflicts of interest, a concentration on the impact of new technologies, new data, and refreshing examples all serve to enhance and illuminate important concepts.

In today's competitive banking industry, institutional banking is attracting greater interest. Under the globalization umbrella, inter-bank business is undergoing dynamic change and is transcending the boundaries of traditional correspondent banking. In today's climate, no bank, regardless of size, can grow without the cooperation of other banks and no bank can hope to survive and prosper without utilizing emerging markets. Institutional banking in emerging countries has some unique functions: for example, problem solving is heavier and more crucial in emerging markets than in developed countries, given the irregularity of the market and non-transparency of the financial/legal systems. Moreover, it is particularly necessary to forge good relationships, day-to-day contact and personal communication, to provide better chances for product marketing and risk management. Products are therefore tailor-made and adapted as the situation dictates, a

successful lesson for one case in one country cannot necessarily be repeated in another. Huang provides a systematic framework for the subject combining both principles and practice. The direct experience of the author, allows him to write authoritatively about the subject with academic vigour as well as a large amount of practical knowledge which only a practitioner can provide. The book contains numerous real life examples and case studies to allow the reader an insight into how Institutional Banking actually works in the real world. The book also contains a supplementary CD which includes chapter summary's and further information. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

In this analysis Morris Goldstein examines currency regime choices for emerging economies that are heavily involved with private capital markets. The author argues that the best regime choice for such economies would be managed floating plus, where "plus" is shorthand for a framework that includes inflation targeting and aggressive measures to discourage currency mismatching. Goldstein argues that if managed floating were enhanced in this way, it would retain the desirable features of a flexible rate regime while addressing the nominal anchor and balance-sheet problems that have historically underpinned a "fear of floating" and handicapped the performance of managed floating in emerging economies. The author also shows why managed floating plus is superior to four alternative currency-regime options--an adjustable peg system, a "BBC (basket, band, crawl) regime," a currency board, and dollarization.

The fifth report in this series focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. In the recent stock market collapse, confidence in the financial industry was shaken by numerous scandals. Beginning with Enron in 2001, scandals brought about the demise of prominent financial figures, damaged the reputation of premiere firms and destroyed the global accounting giant Arthur Andersen. Central to this crisis was the exploitation of conflicts of interest. Research analysts at investment banks were found to be distorting information at the behest of underwriting departments eager to promote new issues. Auditors appeared to sanction misleading accounting in order to gain business for the consulting side of their firms. Policy response in the United States was quick. Large fines were levied and regulators compelled the separation of financial security function, constraining financial

conglomerates. But are these new regulations and safeguards adequate protection? What costs do they impose on the industry? This fifth title in the ICMP/CEPR series of Geneva Reports on the World Economy examines the problem of conflicts of interest in the financial system. Conflicts of interest lead to a decrease in information that makes it harder for the system to provide savers with the accurate, essential information that induces them to provide credit to borrowers. This study focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. Determining the appropriate remedy for a conflict is a challenge because the elimination of conflicts may also eliminate benefits from economies of scope. This study examines five generic remedies: market discipline, regulation for increased transparency, supervisory oversight, separation of financial activities by function, and socialization of the collection and distribution of information. The authors apply this framework to assess critically the Sarbanes-Oxley Act and the Global Settlement between American regulators and investment banks.

This book provides a comprehensive summary of the latest academic research on the important topic of too-big-to-fail (TBTF) in banking. It explains TBTF from various perspectives including the range of regulatory measures proposed to counter TBTF, most notably the globally accepted regulation of global-systemically important banks (G-SIBs) and its main tool of capital surcharges. The empirical analysis quantifies the shareholder value of the G-SIB attribution by using quarterly observations from more than 750 global banks between Q2 2008 and Q3 2015. The main finding is that G-SIBs are confronted with a substantial relative valuation discount compared to non-G-SIBs. From the end of 2011 until the end of 2015, a stable discount of 0.6x-0.8x price-to-tangible common equity (P/TCE) is statistically highly significant. The results suggest that the G-SIB designation effect, which positively impacts G-SIBs' share prices because of funding benefits from IGGs, is dominated by the regulatory G-SIB burden effect, which negatively impacts G-SIBs' share prices because of lower profitability due to capital surcharges and other regulatory requirements placed on G-SIBs. The findings re-open the debate about whether breaking up G-SIBs would unlock shareholder value and whether G-SIBs are regulated efficiently.
