This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes. The syntheses of the main characteristics of

Lake Pavin are, for the first time, set in a firmer footing comparative approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as well as on the geochemistry and

biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and paleolimnology are also given attention. This volume will be of special interest to researchers and advanced students, primarily in the fields of limnology, biogeochemistry, and aquatic ecology.

Hugh Johnson has won a legion of fans with his keen ability to make the sometimes complex topic of wine wonderfully lucid—and every year, his popular pocket guide is a bestseller. That makes it number one in the market. Here, in it's 30th anniversary year, he has completely revised and updated this classic, offering more current news than ever on over 6,000 wines, growers, and regions, along with up-to-the-minute vintage information, recommended wines (including budget options), and star ratings. With this book in hand, wine lovers won't need anything else to help

them select anything from a bottle for an everyday dinner to a prestige vintage for investment. A new section showcases Johnson's special, personal choices, and there are plenty of quick-reference maps, charts, and fact boxes for a little extra guidance.

European Elites and Ideas of Empire, 1917-1957 Nouvelles Editions Latines

Today we can hardly imagine life in Europe without roads and the automobiles that move people and goods around. In fact, the vast majority of movement in Europe takes place on the road. Travelers use the car to explore parts of the continent on their holidays, and goods travel large distances to reach consumers. Indeed, the twentieth century has deservedly been characterized as the century of the car. The situation looked very different around 1900. People crossing national borders by car encountered multiple hurdles on their way. Technically,

they imported their vehicle into a neighboring country and had to pay astronomic import duties. Often they needed to pass a driving test in each country they visited. Early on, automobile and touring clubs sought to make life easier for traveling motorists. International negotiations tackled the problems arising from differing regulations. The resulting volume describes everything from the standardized traffic signs that saved human lives on the road to the European bus taking tourists from Stockholm to Rome in the 1950s. *Driving Europe* offers a highly original portrait of a Europe built on roads in the course of the twentieth century.

Eminent physicist and economist, Robert Ayres, examines the history of technology as a change agent in society, focusing on societal roots rather than technology as an autonomous, self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus *Homo*, language evolved in response to a need for our ancestors to communicate, both in

the moment, and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines, driven by a need to burn coal instead of firewood, in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds, if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution, and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many in the short term, but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer. *A Century of Artists Books* Michelin Italiana Michel de Certeau considers the uses to

which social representation and modes of social behavior are put by individuals and groups, describing the tactics available to the common man for reclaiming his own autonomy from the all-pervasive forces of commerce, politics, and culture. In exploring the public meaning of ingeniously defended private meanings, de Certeau draws on an immense theoretical literature in analytic philosophy, linguistics, sociology, semiology, and anthropology--to speak of an apposite use of imaginative literature. *Air et cosmos* Mitchell Beazley *Global Slump* analyzes the global financial meltdown as the first systemic crisis of the neoliberal stage of capitalism. It argues that—far from having ended—the crisis has ushered in a whole period of worldwide economic and political turbulence. In developing an account of the crisis as rooted in fundamental features of capitalism, *Global Slump* challenges the view that its source lies in financial deregulation. The book locates the recent meltdown in the intense economic restructuring that marked the recessions of the mid-1970s and early 1980s. Through this lens, it highlights the

emergence of new patterns of world inequality and new centers of accumulation, particularly in East Asia, and the profound economic instabilities these produced. *Global Slump* offers an original account of the “financialization” of the world economy during this period, and explores the intricate connections between international financial markets and new forms of debt and dispossession, particularly in the Global South. Analyzing the massive intervention of the world's central banks to stave off another Great Depression, *Global Slump* shows that, while averting a complete meltdown, this intervention also laid the basis for recurring crises for poor and working class people: job loss, increased poverty and inequality, and deep cuts to social programs. The book takes a global view of these processes, exposing the damage inflicted on countries in the Global South, as well as the intensification of racism and attacks on migrant workers. At the same time, *Global Slump* also traces new patterns of social and political resistance—from housing activism and education struggles, to mass strikes and protests in Martinique, Guadeloupe,

France and Puerto Rico—as indicators of the potential for building anti-capitalist opposition to the damage that neoliberal capitalism is inflicting on the lives of millions.

This book is open access under a CC BY 4.0 license. This volume addresses the potential for combining large-scale marine aquaculture of macroalgae, molluscs, crustaceans, and finfish, with offshore structures, primarily those associated with energy production, such as wind turbines and oil-drilling platforms. The volume offers a comprehensive overview and includes chapters on policy, science, engineering, and economic aspects to make this concept a reality. The compilation of chapters authored by internationally recognized researchers across the globe addresses the theoretical and practical aspects of multi-use, and presents case studies of research, development, and demonstration-scale installations in the US and EU.

Tourists climb the Eiffel Tower to see Paris. Parisians know that to really see the city you must descend into the metro. In this revelatory book, Marc Auge takes readers below Paris in a work that is both an ethnography of the city and a personal narrative. Guiding us through history, memory, and physical space, Auge juxtaposes the romance of the metro with the reality of multiethnic urban France. His work is part autobiography, with impressions from a lifetime riding the trains; part meditation on self and memory reflected in the people and places underneath Paris; part analysis of a place where the third world and the first world meet, where remnants of cultures move and press together; and part a reflection on anthropology in an era of globalization and urban development. Although he is a pillar of French thought, *In the Metro* is Auge's first major critical and creative work translated into English. It shows him to be firmly rooted in a tradition of literary ethnography that reaches back to Claude Lévi-Strauss and Michel de Certeau, but also engaged in current theoretical debates in literary and cultural studies. In Auge's idiosyncratic and innovative

approach, the act of observing the quotidian is elevated to an art. The writer and his history become part of the field he observes, and anthropology interacts with a site -- urban life -- usually reserved for sociology and cultural studies. Throughout, Auge reveals a passion for his milieu, seeing the metro as a place rich with history and literature -- an eclectic egalitarian society.

Connaissance des arts Springer Nature
The first comprehensive study in English of the earliest and largest 'Third-World' migration into pre-war Europe. Full attention is given to the relationship between the society of emigration, undermined by colonialism, and processes of ethnic organisation in the metropolitan context. Contemporary anti-Algerian racism is shown to have deep roots in moves by colonial elites to control and police the migrants and to segregate them from contact with Communism, nationalist movements and the French working class.

In this engrossing book, Hollis Clayson provides the first description and analysis of French artistic interest in women

prostitutes, examining how the subject was treated in the art of the 1870s and 1880s by such avant-garde painters as Cézanne, Degas, Manet, and Renoir, as well as by the academic and low-brow painters who were their contemporaries. Clayson not only illuminates the imagery of prostitution-with its contradictory connotations of disgust and fascination-

but also tackles the issues and problems relevant to women and men in a patriarchal society. She discusses the conspicuous sexual commerce during this era and the resulting public panic about the deterioration of social life and civilized mores. She describes the system that evolved out of regulating prostitutes and the subsequent rise of clandestine prostitutes who escaped police regulation

and who were condemned both for blurring social boundaries and for spreading sexual licentiousness among their moral and social superiors. Clayson argues that the subject of covert prostitution was especially attractive to vanguard painters because it exemplified the commercialization and the ambiguity of modern life.
