Working Better with Age

Royal Society of Chemistry

Soon after the first description of monoclonal antibodies in 1976, there was enormous interest in the clinical application of antibodies, especially in the context of cancer. Antibodies appeared to offer the "magic bullet" that would allow the specific destruction of

neoplastic cells. However, many years' effort resulted in very few cases of successful immunotherapy with antibodies. As a result there was a major backlash against antibody therapy, and the field lost a considerable amount of popularity. Fashion, in science as well as in other things, tends to be cyclical. Antibody-based therapy is once again attracting scientists and clinicians. There are several reasons for the renewed optimism; certainly the experience of the last two decades

has provided a wealth of information about problems associated with antibody therapy, and possible solutions to these problems. Recombinant antibody engineering has rejuvenated the field, allowing both the modification of antibodies to improve their in vivo properties and the isolation of novel antibody molecules by such techniques as phage display. The results of recent clinical trials have demonstrated unequivocally the benefit of antibody therapy in a

number of settings, and, finally, more careful consideration has been taken of the types of disease best treated using this approach.

The quality and safety of the food we eat attracts a great deal of publicity and is high on the list of public concerns. This highly emotive issue is discussed in this timely book, which brings together a group of experts to present up-to-date and balanced

overviews on a wide range of topics including GM crops; hazardous microorganisms such as E. coli; the BSE/CJD problem; and cancer-causing chemicals, both natural and synthetic. Thought-provoking and of interest to a wide readership, this authoritative review will be welcomed by food scientists, legislators, government officials and advisors. Students of food science or environmental science will also find it essential reading.

The author presents an analysis of each one of the parables, taking into account the context in which Jesus presented the parable, then how it was understood and used by the people of that day, and finally, how we can follow its teachings within our own context. Dr. Fricke is a retired missionary who taught in Latin American seminaries for many years, and wrote this book in Spanish.

The ancient Greek poet Pindar once wrote, 'Unsung, the noblest deed will die.' Brave Men of War- from the heights of Kargil to the plains of Punjab-sets out to record acts of valour and tell the

stories of the brave men, some of whom unflinchingly paid the price of victory with the ultimate sacrifice of their lives during the 1965 Indo-Pak war. Pakistan's defeat in the war, marked the coming of age of the Indian army. There are stories of countless young men who lost their lives, fighting until they 'd drawn their last breath but all too often their stories were either forgotten or reduced to footnotes in the larger volumes of history. This book recounts the heroic

and fearless acts of bravery demonstrated by our men in Olive. The list includes Lt Gen Harbaksh Singh, the military leader who planned, directed and commanded the operations and actions, Lt Col Desmond Hayde, the hero of Dograi, Lt Col AB Tarapore and Lt Col MMS Bakshi and many others. Without glamorising war, this is an attempt to preserve the stories of heroism and sacrifice of some fearless men, so that they may become role models for the youth of India and never be

forgotten.

This book offers an overview of some recent advances in the Computational Bioacoustics methods and technology. In the focus of

discussion is the pursuit of scalability, which would facilitate real-world applications of different scope and purpose, such as wildlife monitoring, biodiversity assessment, pest population control, and monitoring the spread of disease transmitting mosquitoes. The various tasks of Computational Bioacoustics are described and a wide range of audio parameterization and recognition tasks related to the automated recognition of species and sound events is

discussed. Many of the Computational Bioacoustics methods were originally developed for the needs of speech, audio, or image processing, and afterwards were adapted to the requirements of automated acoustic recognition of species, or were elaborated further to address the challenges of real-world operation in 24/7 mode. The interested reader is encouraged to follow the numerous references and links to web resources for further information and insights.

This book is addressed to Software Engineers, IT experts, Computer Science researchers, Bioacousticians, and other practitioners concerned with the creation of new tools and services, aimed at enhancing the technological support to Computational Bioacoustics applications. STTM, Speech Technology and Text Mining in Medicine and Health Care This series demonstrates how the latest advances in speech technology and text mining positively affect patient healthcare

and, in a much broader sense, public health at large. New developments in text mining methods have allowed health care providers to monitor a large population of patients at any time and from any location. Employing advanced summarization techniques, patient data can be readily extracted from extensive clinical documents in electronic health records and immediately made available to the physician. These same summarization techniques

can also aid the healthcare provider in extracting from the large corpora of medical literature the relevant information for treating the patient. The series topics include the design and acceptance of speech-enabled robots that assist in the operating room, studies of signal processing and acoustic modeling for speech and communication disorders, advanced statistical speech enhancement

methods for creating synthetic voice, and technologies for addressing speech and language impairments. Titles in the Series consist of both authored books and edited contributions. All authored books and contributed works are peer-reviewed. The Series is for speech scientists and speech engineers, machine learning experts, biomedical engineers, medical speech pathologists, linguists, and healthcare

professionals
