The authoritarian and totalitarian systems of individual countries have long been studied independently of each other. The separation of Eastern and Western Europe was used as a parameter by

historians. This also applies to the analysis of Communism and Mussolini's Fascism. Only in recent years has the comparative perspective in the regional, chronological and system-oriented sense been applied, thus allowing many phenomena to be correctly understood and assessed. Central and Eastern Europe is tied to Western and Southern Europe by the experience of dictatorship and the ongoing need to evaluate and come to terms with these dictatorships. In the present anthology Mussolini's Fascism, National Socialism and Communism are examined comparatively. Similarities, connections and mutual influences in

these dictatorships are sought. Finally, the transition from dictatorship to democracy is examined. With this collection of essays the editors intend to give impulse for inter-European comparative research on dictatorships and democracy.

*Kidnapped and sold into slavery in the American South, freeman Solomon Northup spent twelve years in bondage before being freed. Twelve Years a Slave is Northup's moving memoir, revealing unimaginable details of the horrors he faced as a slave on Southern*

plantations, and his unshakable belief that he would return home to his family. Written in the year after Northup was freed and published in the wake of Harriet Beecher Stowe's *Uncle Tom's Cabin*, Northup's story was quickly taken up by abolitionist groups and news organizations as part of the fight against slavery, and continues to resonate more than a century after the end of the American Civil War.

A memoir covering the author's life long experiences in the

American work scene. Phil Irwin has held a lot of different jobs as the title of the book implies, they ranged from low paying retail sales gigs and restaurant grunt work to a managerial position with a national retail inventory service. He sold everything from encyclopedias to toilets, spent periods of time as a repo man, temp, and a clerical worker stationed at a cubical. Irwin was never technically terminated from a job. The reasons for him leaving so many positions over the years, were often due to tyrannical bosses, back-stabbing co-workers and the fact that many of his employers did not live up to promises made to recruit new employees.

### **How Airports Work**

Penguin

Concerns for fuel economy and reduced emissions have turned the attention of automotive internal combustion engine manufacturers to the exhaust system and towards technological system development to

account for the significant levels of potential energy that can be recovered. The present volume on Automotive Exhaust Emissions and Energy Recovery for both gasoline and diesel engines is therefore both timely and appropriate. Whereas diesel engines have been predominantly turbocharged, only a relatively small percentage of gasoline engines are similarly equipped, which has led to significant efforts by engine manufacturers in recent years to downsize and down-speed these engines. On the other hand, the relative focus in diesel engine development in terms of emissions and exhaust energy recovery has shifted toward devices other

than the turbocharger for enhanced energy recovery and emissions control technologies in order to allow the diesel engines of the future to keep up with the dual-demand for very low emissions and increasing levels of fuel economy. The book focuses on the exhaust system and the technologies and methods used to reduce emissions and increase fuel economy by capitalising on the exhaust gas energy availability (either in the form of gas kinetic energy or as waste heat extracted from the exhaust gas). It is projected that in the short to medium term, advances in exhaust emissions and energy recovery technologies will lead the way in internal combustion engine development

and pave the way towards increasing levels of engine hybridisation until fully electric vehicle technology can claim a level of maturity and corresponding market shares to turn the bulk of this focus away from the internal combustion engine. This book is aimed at engine research professionals in the industry and academia, but also towards students of powertrain engineering. The collection of articles in this book reviews the fundamentals of relevance, recent exhaust system technologies, details recent or on-going projects and uncovers future research directions and potentials.

The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction

community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been

written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

The Wormhole Crisis - A Novel of Time

TravelAdmiral Ashley Patterson and her husband, famous publisher Jack Thurber, have done it again, not that they were planning on it. They crossed a wormhole, a portal in time, a gateway to a different world. They had done it before, but this one was different-This wormhole was man-made. President Matt Blake realized that the country was in the

grips of a crisis, one which he dubbed, The Wormhole Crisis. Recognizing Admiral Patterson's talent for fearless leadership, he promoted her to fleet Admiral, the highest rank in the Navy. At the same time he appointed her Chairwoman of the Joint Chiefs of Staff, the highest position in the American military. The President knew he had a horrifying crisis to solve, and who better to lead the effort than Admiral Patterson. He put her in charge of Operation Wormhole Kill, along with her close husband, Jack. Together they embarked on a terrifying attempt to save the world from man-made time travel. A rogue nation had manufactured a

wormhole-creating satellite, one which can inflict a wormhole anywhere on earth. The problem got worse when that nation created an instrument on the satellite that can detonate a bomb on earth-from space. The only way to deal with a wormhole is to recross it to find your way back to the time you came from. But the rogue nation created a new type of wormhole-one that didn't enable you to recross it. One horrifying night, the evening of the annual State of the Union Address, saw the ultimate result of the terrifying satellite, one that could spell the end of the world. Instantly the fate of the world changed, especially for Admiral Patterson. It was a new world, a world Ashley could

never have imagined.  
The fate of mankind

was in Admiral  
Patterson's hands.
