Freddie Steinmark started at safety for the undefeated University of Texas Longhorns in 1969. In the thrilling "Game of the Century," a come-from-behind victory against Arkansas that ensured Texas the national championship, Steinmark played with pain in his left leg. Two days later, X-rays revealed a bone tumor so large that it seemed a miracle Steinmark could walk, let alone play football. Within a week of the Arkansas game, his leg was amputated. A gritty, undersized player, Steinmark had quickly become a fan favorite at Texas. What he endured during the Longhorns' memorable 1969 season, and what he encountered afterward, captivated not only Texans but the country at large. Americans watched closely as Steinmark confronted life's ultimate challenge, and his openness during his battle against savage odds helped reframe the national conversation surrounding cancer and the ongoing race for a cure. Written with unfettered access to the Steinmark family and archives, *Freddie Steinmark: Faith, Family, Football* is the exploration of a brief but full life, one that began humbly but ended on a grand stage. It is a fitting tribute to a legendary Longhorn whose photograph, emblazoned with the word "Heart," flashes on the Freddie Steinmark Scoreboard's Jumbotron prior to each home football game in UT's Darrell K Royal-Texas Memorial Stadium at Joe Jamail Field.

A Pulitzer Prize Finalist, this powerful elegy for our disappearing coast "captures nature with precise words that almost amount to poetry" (The New York Times). Hailed as "the book on climate change and sea levels that was missing" (Chicago Tribune), *Rising* is both a highly original work of lyric reportage and a haunting meditation on how to let go of the places we love. With every record-breaking hurricane, it grows clearer that climate change is neither imagined nor distant—and that rising seas are transforming the coastline of the United States in irrevocable ways. In *Rising*, Elizabeth Rush guides readers through these dramatic changes, from the Gulf Coast to Miami, and from New York City to the Bay Area. For many of the plants, animals, and humans in these places, the options are stark: retreat or perish. Rush sheds light on the unfolding crises through

firsthand testimonials—a Staten Islander who lost her father during Sandy, the remaining holdouts of a Native American community on a drowning Isle de Jean Charles, a neighborhood in Pensacola settled by escaped slaves hundreds of years ago—woven together with profiles of wildlife biologists, activists, and other members of these vulnerable communities. (Lots of stuff, it turns out). Jim Byrd died. Technically. For a few minutes. The diagnosis: heart attack at age thirty. Revived with no memory of any tunnels, lights, or angels, Jim wonders what—if anything—awaits us on the other side. Then a ghost shows up. Maybe. Jim and his new wife, Annie, find themselves tangling with holograms, psychics, messages from the beyond, and a machine that connects the living and the dead. As Jim and Annie journey through history and fumble

through faith, they confront the specter of loss that looms for anyone who dares to fall in love. Funny, fiercely original, and gracefully moving, *The Afterlives* will haunt you. In a good way.

Patient care and safety are addressed in each chapter. "[The ASCRS Textbook of Colon and Rectal Surgery] is a long awaited textbook for those in the field and it does not disappoint. It is brief and to the point, but does not lack the necessary detail expected from a society-produced publication. [It has an] easy-to-read quality that enhances comprehension for the trainee. It is by no means just a student textbook. The inclusion of "hot" current topics, like the anal fistula plug, makes it fresh and useful for experienced surgeons. This is an excellent addition to the colorectal library." (Doody's Review)

**Rush** Springer Nature

Once upon a time, specifically ranging from 1866 until the end of the 1950s, almost all of the attending staff at Cook County Hospital (CCH)—and thus the instructors who prepared physicians for their roles in the world—were unpaid volunteers. In all large public teaching hospitals, like CCH, appointment to the staff was both an honor and public recognition of the appointee's status, his or her reputation among his or her peers. Prior to the advent of all-fulltime salaried positions in the 1970s and 1980s, nearly all of the attending staff were non-paid volunteers. Consequently, for all of CCH history up to that point, the list of surgical faculty is a virtual "Who's Who" of Chicago surgeons. This book examines the development of the medical disciplines that historically fell under the aegis of the department of surgery at CCH and other similar institutions. The individuals who taught successive new generations of surgeons were not necessarily famed in their time. Already respected, however, they gained legendary status as their former students realized just how effectively these men had taught them. From relevant anecdotes about individual interactions with these instructors to a collection of "quotable quotes" and historical vignettes and personal experiences from physicians and nurses, this book looks at a unique time and collection of individuals who conspired to achieve something remarkable. It is more than a history of a building on Chicago's west side—it is an inside look at the people

who made Cook County Hospital a center of top-flight medical education and world-class care through the years.
