This Code of Practice is designed to help companies assess and maintain the competence of their engineering staff particularly in safety critical areas and industries. It sets out the competencies expected and evidence required to prove competence in specific tasks and helps organisations create schemes for monitoring and measuring the competencies of its employees. Human error is still recognised as the most frequent cause of problems and the field of safety critical systems and functional safety continues to develop along with the complexity of systems. The purpose of the Code of Practice is: To help organisations with creating or developing a scheme for assessing the competence of people and teams undertaking safety critical functions To demonstrate to clients that an organisation has the necessary competence to undertake particular activities and that a recognised competence measurement scheme has been used To provide clear levels of expertise and competence required prior to recruiting engineers in safety critical roles. And subsequently for appraising / training those personnel To help in implementing an overall competence management system (CMS) for an engineering division or organisation To comply with regulatory requirements/relevant standards, showing duty of care and compliance to regulations

and EU directives (specifically IEC 61508 and HSE requirements) To provide evidence of best practice and high levels of competence to any industry regulator and to avoid potential litigation

"The CSP Exam - Essential Practice by Farcas, Hammond, and Cena is, as the name implies, an essential set of questions in Occupational Safety. This book is well laid out in 19 sections. It draws the reader in, which certainly assists with their increased retention of the amount of material that has to be covered. The questions are well introduced with a short narrative before the introduction of the pertinent equations and solution to the over 600 example essential questions. The book serves not only as a formidable preparation for the CIH exam but a good review of basic principles, a reference for many of the day-to-day technical issues confronting the practicing worker's safety and a guide for raising awareness of potential problems for which alert action is required. The authors bring a breadth of experience and insight into the issues handled in the text. They bring context to the basic principles to be highlighted by the examples of the questions and their solutions. CSP Exam - Essential Practice should be a must-have text for everyone in the field."Michael McCawley, Ph.D., West Virginia University.

A Step by Step Guide to COSHH

Assessment Independently Published This booklet provides advice and guidance to employers for assessment of their activities under the Control of Substances Hazardous to Health Regulations 1988 (COSHH). It replaces COSHH Assessments: A Step by Step Guide to Assessment and

the Skills Needed for it published by HSE when COSHH was first introduced. This guidance takes note of the experience in assessment that has been gained since 1988 and the new requirement for regular review. The principles of assessment have not changed since COSHH first appeared, but this booklet illustrates them with extensive examples.
