 Lean Behavioral
 Health: The Kings
 County Hospital Story
 is the first lean book
 that focuses entirely on
 behavioral health.
 Using the principles of
 the Toyota Production
 System, or lean, the
 contributors in this
 groundbreaking
 volume share their
 experience in
 transforming a major
 safety net public
 hospital after a tragic
 and internationally
 publicized event. As
 the largest municipal
 hospital system in the
 United States, the New
 York City Health &
 Hospitals Corporation
 adopted lean as the
 transformational
 approach for all of its
 hospitals and clinics.
 Kings County Hospital

Center, one of the
 largest providers of
 behavioral health care
 in the country,
 continues on its
 transformational
 journey utilizing lean's
 techniques. While not
 every event was fully
 successful, most were
 and every event,
 including failures,
 increased the
 knowledge base about
 how to continually
 improve quality and
 safety. Having made
 major changes, Kings
 County Hospital Center
 is now recognized as a
 center for
 transformation and
 quality receiving high
 marks from oversight
 agencies. This volume
 begins by describing
 the basic principles of
 the lean approach-
 adding value,
 eliminating waste, and
 tapping the
 organization's line staff

to create and sustain dramatic change. An overview of the use of lean from a quality improvement perspective follows. Lean tools are applied to many services that comprise the behavioral health value stream and these stories are highlighted. The experts in identifying waste and adding value are the line staff whose voices are captured in the clinical chapters. Insights learned by event participants are emphasized as teaching points to provide context for what has worked or has not worked at Kings County Hospital Center. While the burning platform at Kings County Hospital Center was white hot and while the Department of Justice

scrutinized its quality of patient care, the application of lean methods and tools has transformed the hospital into a potential model for behavioral health programs facing the challenges of the present healthcare environment. It is a must-have story for clinicians, administrators and other leaders in the mental health field devoted to improving quality and safety at their hospitals and clinics.

This unique volume presents an ecocultural and embodied perspective on understanding numbers and their history in indigenous communities. The book focuses on research carried out in Papua New Guinea and Oceania, and will help educators understand humanity's use of numbers, and their development and change. The authors focus on indigenous mathematics education in the early years and

shine light on the unique processes and number systems of non-European styled cultural classrooms. This new perspective for mathematics education challenges educators who have not heard about the history of number outside of Western traditions, and can help them develop a rich cultural competence in their own practice and a new vision of foundational number concepts such as large numbers, groups, and systems. Featured in this invaluable resource are some data and analyses that chief researcher Glendon Angove Lean collected while living in Papua New Guinea before his death in 1995. Among the topics covered: The diversity of counting

system cycles, where they were established, and how they may have developed. A detailed exploration of number systems other than base 10 systems including: 2-cycle, 5-cycle, 4- and 6-cycle systems, and body-part tally systems. Research collected from major studies such as Geoff Smith's and Sue Holzknecht's studies of Morobe Province's multiple counting systems, Charly Muke's study of counting in the Wahgi Valley in the Jiwaka Province, and Patricia Paraide's documentation of the number and measurement knowledge of her Tolai community. The implications of viewing early numeracy in the light of this book's research, and ways of

catering to diversity in mathematics education. In this volume Kay Owens draws on recent research from diverse fields such as linguistics and archaeology to present their exegesis on the history of number reaching back ten thousand years ago. Researchers and educators interested in the history of mathematical sciences will find *History of Number: Evidence from Papua New Guinea and Oceania* to be an invaluable resource.

This book is not about debits, credits, or accounting theory. It's about how a chief financial officer (CFO) becomes a Lean CFO to lead the transformation of a company's management accounting system into a lean management accounting system. It's been well established in lean companies that traditional management accounting systems do not provide relevant and reliable information to decision makers. The CFO, as steward of a company's management accounting system, must provide the leadership to improve the quality of the information produced by a company's

management accounting system so it is aligned with a company's lean strategy, lean operations, and continuous improvement. The integration of a lean management accounting system with a company's lean strategy will lead to improved decision making by all users and drive long-term financial success. Lean management accounting helps all users, from executives to line managers, better understand the relationships between lean operating performance and financial performance. Written in the style of a practice guide, The Lean CFO is written not just for CFOs, but for all stakeholders of a company's

management accounting system, such as executives and owners, lean leaders, functional managers, and accounting professionals.
