This book tells the history of Superior, Arizona, from the years 1930 to 1950. Superior is located in the central part of the state just inside the southern boundary of the Tonto National Forest. The town was the home of the Magma mine, which was owned by the Magma Copper Company. The Magma mine was an underground, or “hard rock,” copper mine. It operated continuously from 1910 to 1982, was one of the most productive mines in US history, and also included a smelter, mill, and railroad. The book hermeneutically (interpretively) merges into a single narrative the oral histories of 15 persons who were born between 1923 and 1934 and lived in Superior during all or most of 1930 through 1950. The purpose of combining the contributions into a single story was to yield a thicker, more corroborated history of the town than otherwise would have been possible by presenting them separately. Supplementing the narrative are a (1) historiographical description of the town and mine, (2) sociological analysis of their relationship, the community’s solidarity, and the segregation experienced among Mexican, Caucasian, Native American, and African American residents, (3) description of the personal meaning of underground mining, and (4) review of methods.

From the bestselling and award-winning author of <i>The Sparrow</i> comes “historical fiction that feels uncomfortably relevant today” (Kirkus Reviews) about “America’s Joan of Arc”—the courageous woman who started a rebellion by leading a strike against the largest copper mining company in the world. In July 1913, twenty-five-year-old Annie Clements has seen enough of the world to know that it’s unfair. She’s spent her whole life in the mining town of Calumet, Michigan, where men risk their lives for meager salaries—and have barely enough to put food on the table for their families. The women labor in the houses of the elite, and send their husbands and sons deep underground each day, dreading the fateful call of the company man telling them their loved ones aren’t coming home. So, when Annie decides to stand up for the entire town of Calumet, nearly everyone believes she may have taken on more than she is prepared to handle. Yet as Annie struggles to improve the future of her town, her husband becomes increasingly frustrated with her growing independence. She faces the threat of prison while also discovering a forbidden love. On her fierce quest for justice, Annie will see just how much she is willing to sacrifice for the families of Calumet. From one of the most versatile writers in contemporary fiction, this novel is an authentic and moving historical portrait of the lives of the crucial men and women of the early labor movement “with an important message that will resonate with contemporary readers” (Booklist).

Southeastern Arizona has one of the most diverse mining localities in the state. Towns such as Bisbee, Clifton, Globe, Miami, Ray, Silverbell, and Superior have earned reputations as premier metal producers that are most notably known for their copper. Other mining towns that have made their marks in the region include Dos Cabezas, Gleeson, Harshaw District, Helvetia, Patagonia District, Pearce, Ruby, and Tombstone. Mining in southeastern Arizona has significantly influenced the development of mines in northern Sonora, Mexico. The foundation of Mexico's largest copper mine in Cananea was financed by American capital, specifically under the direction of miners and investors from southeastern Arizona. Overall, the process of mining has established the economy of southeastern Arizona, making it a viable source of copper-related minerals in the 21st century's global market.

Based on extensive research in Spain, Mexico, Texas, New Mexico, and California, Apache, Navaho, and Spaniard tells of the Spanish advance in the seventeenth century into northern Mexico and the Southwest, and of the American Indian response. Focusing on the Apache, Navaho, and neighboring nations, Jack Forbes reveals how long-standing, mutually beneficial relationships existing between the indigenous communities were	

upset by Spanish exploitation and slave-raiding, causing rebellions and widespread armed resistance that blunted the growth of the Spanish Empire. *Copper Manual* University Press of Colorado

This book is written as Cuentos, short stories, of my life growing up in small rough mining towns in Arizona and New Mexico. Although I wrote it as a humorous book it was not an enjoyable time for us growing up with with no English spoken in our homes. We were oftentimes punished for speaking in our native language, Spanish in class or even during playground times. I quickly learned that education was the key for me to enjoy a better life than my parents ever had. I instilled in my sons the value of education for them to succeed in their lives. I wrote this as short stories that will hopefully paint a complete picture of my life as it unfolded over the last seventy years.

“This is a landmark not only of Appalachian history but of southern economic and environmental history as well.” —John C. Inscoe, author of *Race, War, and Remembrance in the Appalachian South* Manufacturing in the Northeast and the Midwest pushed the United States to the forefront of industrialized nations during the early nineteenth century; the South, however, lacked the large cities and broad consumer demand that catalyzed changes in other parts of the country. Nonetheless, in contrast to older stereotypes, southerners did not shun industrial development when profits were possible. Even in the Appalachian South, where the rugged terrain presented particular challenges, southern entrepreneurs formed companies as early as 1760 to take advantage of the region’s natural resources. In *Mountains on the Market: Industry, the Environment, and the South*, Randal L. Hall charts the economic progress of the New River Valley in the Blue Ridge Mountains of southwestern Virginia, which became home to a wide variety of industries. By the start of the Civil War, railroads had made their way into the area, and the mining and processing of lead, copper, and iron had long been underway. Covering 250 years of industrialization, environmental exploitation, and the effects of globalization, *Mountains on the Market* situates the New River Valley squarely in the mainstream of American capitalism. “Southernists will now refer to this book first in thinking about the historical development of the extractive industries, their impact on the environment, and what it tells us about the South.” —David Brown, coauthor of *Race in the American South: From Slavery to Civil Rights* “An excellent microhistory of an understudied region of the Appalachian South.” —North Carolina Historical Review

An account of the rise and fall of a mining town over two centuries, including photos: “An excellent story of the people and their community.” —New Mexico Historical Review The Spanish, Mexicans, and Americans, successively, mined copper for more than two hundred years in Santa Rita, New Mexico. Starting in 1799 after an Apache man led the Spanish to the native copper deposits, miners at the site followed industry developments in the nineteenth century to create a network of underground mines. In the early twentieth century these works became part of the Chino Copper Company’s open-pit mining operations—operations that would overtake Santa Rita by 1970. In *Santa Rita del Cobre*, Christopher Huggard and Terrence Humble detail these developments with in-depth explanations of mining technology, and describe the effects on and consequences for the workers, the community, and the natural environment. Originally known as El Cobre, the mining-military camp of Santa Rita del Cobre ultimately became the company town of Santa Rita, which after World War II evolved into an independent community. From the town’s beginnings to its demise, its mixed-heritage inhabitants from Mexico and the United States cultivated rich family, educational, religious, social, and labor traditions. Extensive archival photographs, many taken by officials of the Kennecott Copper Corporation, accompany the text, providing an important visual and historical record of a town swallowed up by the industry that created it.

Mining historian Kerby Jackson introduces us to a classic mining work in this important re-issue of the Department of Interior publication "Mineral Deposits of the Santa Rita and Patagonia Mountains of Arizona." Originally published in 1915, this important publication on Arizona Mining has not been available for nearly a century. Included are rare insights into hundreds of gold, silver, copper and other mines in this famous Arizona mining area. Details include the locations, geology, history, production and other facts of the mines of this region. Note: This edition is a perfect facsimile of the original edition and is not set in a modern typeface. As such, some type characters and images might suffer from slight imperfections or minor shadows in the page background.

*The Production of Copper in 1910*

"Santa Rita del Cobre" is the story of the formative years (1801-1838) of a remarkable mine in southwestern New Mexico that has produced copper for more than 200 years. Records of the Spanish Colonial and early Mexican period have yielded intriguing accounts of the people involved in the early development of the mines, the difficulties they encountered along the way, and the importance of this small settlement to the history of the frontier. Although the Santa Rita mines produced a fortune to the few men willing or able to invest money in their development, it was always a

difficult and hazardous undertaking. Apaches, who inhabited much of southern New Mexico and Arizona at that time, created many problems for the miners. They had a strong influence over the success or failure of the Santa Rita mining operation. At times the hostility and depredations of these Indians overshadowed the remarkable success of the mines. Santa Rita was the center for military operations against the Apaches, and was referred to as the watchtower and guardian of the western frontier.
