Abstract: Nutrition education lesson plans for the Choose Well Be Well series are provided by grade level as resources for teachers' and other nutrition educators helping students obtain knowledge and skills needed to make wise food choices contributing to overall health and well being. Three types of lessons are provided: information acquisition, open ended discussion and values awareness. Each provides a detailed description of the procedure and a list of required instructional materials. Designed to help students attain California's Minimum Proficiency Levels for Nutrition Education, lessons and activity sections may be used in their entirety or selectively to blend with ongoing curriculum or student needs. Handout, worksheet and game board masters are included. (js).

Federal law now requires that institutions provide training for anyone caring for or using laboratory animals. This volume provides the guidelines and resources needed to coordinate a quality training program, as well as to meet all legal requirements. A core module for all personnel takes no more than four hours to present. Most staff then proceed to one or more additional skills-development modules including the species-specific module that can be customized to any species in use at the institution, the pain management module, and the surgery module. The volume provides content information for required topics-from ethics to record keeping-and lists sources of additional publications, audiovisual programs, and computerized teaching aids. Included are: Ready-to-use teaching outlines, with detailed instructions for presenting material. Practical guidelines on logistics, covering scheduling, budgeting, and more. Guidelines on how to design training for adults and how to work with investigators who may resist taking training courses. This practical guidebook will be necessary for research institutions, particularly for staff members responsible for training coordination.

Nutrition Decisions: Eat Smart, Move More encourages personal health behavior change for a

lifetime of good habits and good health among students. The text employs the Theory of Planned Behavior to empower students to make positive changes in their lives to improve their health. The most current research-based information on each concept is presented as well as specific strategies that can be employed for behavior change. Information is presented in modules that include one specific topic of instruction within the field of nutrition, physical activity or other aspect of health and wellness. The material is research-based and well referenced, but is presented in an applied and consumer-oriented method that makes it easy for a non-science major to understand. Students are encouraged to check their own behavior based on the module content. Instructors will be given instructions on how to track a specific behavior (for example, record beverage consumption over 3 days). Suggestions will be given as to how students can make specific positive changes. Students will record their goal and how they intend to improve their overall health on their personal record sheet, which will be presented in the text as well as on the companion website. All chapters will include suggestions about how students can make incremental changes in their health behaviors. There will also be a myth versus fact section that will discuss the most common myths about foods and nutrition.
