Patients expected him to prescribe medication to rid them of their illness or treat their symptoms, but didn't expect to have to change their behaviour. Medication alone, patients assumed, would do the work of healing. The Best Medicine Is You shows how small, basic changes—from eating chocolate in the morning to sleeping well at night—can improve your health, protect against disease, and help you lead a happier life. War Surgery New York, London, The Century Company [1928]

"Germany long ago became part of us German Turks," Zafer Senocak observes. "Are we also a part of Germany?"

Gathered here for the first time in English translation, these essays chart a new orientation for German life, culture, and politics beyond the Cold War and at the dawn of an unprecedented era. The 1990s began with national unification between East and West and closed with a radical liberalization of German citizenship law; many questions about the largest minority in this multicultural Germany have yet to be asked. This

decade also reeled with war in the Persian Gulf and "ethnic cleansing" in the Balkans. As Germans imagine themselves as westerners interacting with Muslim populations at home and abroad, these essays acquire a critical urgency. Senocak reconfigures the Turkish diaspora and the German nation by mapping a "tropical Germany." The Geography of the Hittite Empire U of Nebraska Press

Self-determination, imported into the Middle East on the heels of World War I, held out the promise of democratic governance to the former territories of the Ottoman Empire. The new states that European Great Powers carved out of the multilingual, multiethnic, and multireligious empire were expected to adhere to new forms of affiliation that

emphasized previously unimportant differences. In 1936, the new Republic of Turkey lay claim to Antioch and the Sanjak (province) of Alexandretta, which the French had ruled since 1920 as part of its mandate over Syria. Turkey's ambassador made a passionate argument that Alexandretta was a homeland of the Turks, a place that was essentially Turkish. With France and Turkey unable to reach agreement, the League of Nations was called in to broker a compromise consistent with the spirit of the new democratic impulse, one of many disputes that it had to adjudicate as self-determination became a rallying cry for peoples who wanted to form new nations around their collective identities. Over the next four years, Turkey struggled for recognition of its claims to

the territory, while Turkish authorities competed to win hearts and minds in Alexandretta province. In this nuanced narrative, Sarah D. Shields illuminates how the people of this region—about a quarter of a million Arabs, Armenians, Circassians, Kurds, and Turks—were forced to choose between Turkish and Arab identities. In the end, Shields shows, national identities played no role in the outcome of the dispute. What happened on the ground in this contested region was determined by Great Power diplomacy amidst the crisis of European democracy in the late 1930s, a story skillfully interwoven with the violent struggles that took place on the streets of the province. In the end, a new kind of identity politics was unleashed that redefined belonging,

transformed nationalism, and set in motion the process of dysfunctional democracy that continues to plague the Middle East.

What is Sufism? Contemporary views vary tremendously, even among Sufis themselves. Contemporary Sufism: Piety, Politics, and Popular Culture brings to light the religious frameworks that shape the views of Sufism's friends,

adversaries, admirers, and detractors and, in the process, helps readers better understand the diversity of contemporary Sufism, the pressures and cultural openings to which it responds, and the many divergent opinions about contemporary Sufism's relationship to Islam. The three main themes: piety, politics, and popular culture are explored in relation to the Islamic and Western contexts that shape them, as well as to the historical conditions that frame contemporary debates. This book is split into three parts: • Sufism and anti-Sufism in contemporary contexts; • Contemporary Sufism in the West: Poetic influences and popular manifestations; • Gendering Sufism: Tradition and transformation. This book will fascinate anyone interested in the challenges of

contemporary Sufism as well as its relationship to Islam, gender, and the West. It offers an ideal starting point from which undergraduate and postgraduate students, teachers and lecturers can explore Sufism today.

Fibronectins comprise a class of high molecular weight glycoproteins present both in extracellular matrices and in soluble form in body fluids. Although they have been studied for about forty years, their real significance emerged only during the past decade. Intensive research has focused on their role in platelet function, cell migration, the

cytoskeleton, reticuloendothelial function, and on alterations in fibronectin distribution during development and disease. Fibronectins have emerged as glycoproteins with a very interesting set of properties generally involving adhesion of cells to cells or to extracellular material. In more recent years, the complete sequences of several fibronectin molecules and their

genes were determined, the relation between structure and function was understood and much has been learned about cell surface receptors for fibronectins and other adhesive ligands. Having been at the forefront of all these exciting developments, the author has synthesized the entire field and with all the latest information at hand for the first time given it a clear perspective.
