| This book is part of a two-part volume book that highlights the latest advances in innovative bioceramics applied in the highly interdisciplinary area referred to as “translational medicine”. This volume predominantly written by surgeons in the fields of craniomaxillofacial, orthopedics, and spinal surgery, examines the translation of innovative bioceramics and bioceramics-based composite from the laboratory to a personalized surgical environment for the repair of damaged and diseased bone tissues. This book also covers the topic of osteoporosis, a skeletal disorder in which the World Health Organization (WHO) has recognized it as a public health emergency due to the high number of subjects who exhibited the disease and the morbidity and mortality related to fractures. The book caters to biomaterials researchers and medical clinicians who are interested in incorporating innovative bioceramics to the above-mentioned applications.  |                   |

This book identifies the most common presentations and essential features of top dermatological conditions in patients with skin of color. It presents practical information in a case-based organization to assist dermatologists in clinical decision making, and discusses important cultural beliefs that must be considered in order to provide optimal care to patients with skin of color. There is an increasing demand for dermatologic treatments in patients with skin of color, as well as an accompanying need for education and training in this quickly expanding market. Skin of color is a key topic within dermatology as specific conditions can be harder to diagnose effectively in darker skin, and patients' treatment can be compromised by this. Clinical Cases in Skin of Color: Medical, Oncological and Hair Disorders, and Cosmetic Dermatology is a concise resource with practical guidance for board certified dermatologists and dermatologists in training.
