consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is

now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and

environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

Brunner and Suddarth's Textbook of Medical-surgical Nursing Rowman & Littlefield

A supplemental textbook for middle and high school students, Hoosiers and the American Story provides intimate views

of individuals and places in Indiana set within themes of American history. During the frontier days when Americans battled with and exiled native peoples from the East, Indiana was on the leading edge of America's westward expansion. As waves of immigrants swept across the Appalachians and eastern waterways, Indiana became established as both a crossroads and as a vital part of Middle America. Indiana's stories illuminate the history of American agriculture, wars, industrialization, ethnic conflicts, technological improvements, political battles, transportation networks, economic shifts, social welfare initiatives, and more. In so doing, they elucidate large national issues so that students can relate personally to the ideas and events

that comprise American history. At the same time, the stories shed light on what it means to be a Hoosier, today and in the past.

Electroluminescence II Yearling

Newbery Honor-winning, New York Times–bestselling, and as full of fun and adventure as it is of deeper family issues. School’s out for summer, and Penny and her cousin Frankie have big plans to eat lots of butter pecan ice cream, swim at the local pool, and cheer on their favorite baseball team—the Brooklyn Dodgers! But sometimes things don’t go according to plan. Penny’s mom doesn’t want her to swim because she’s afraid Penny will get polio. Frankie is constantly getting into trouble, and Penny feels caught between the two sides of her family. But even if the

summer doesn’t exactly start as planned . . . things can work out in the most unexpected ways! Set just after World War II, this thought-provoking novel also highlights the prejudice Penny’s Italian American family must confront because people of Italian descent were “the enemy” not long ago. Inspired by three-time Newbery Honor winner Jennifer Holm’s own Italian American family, Penny from Heaven is a story about families—about the things that tear them apart and the things that bring them back together. Includes an author’s note with photographs and background on World War II, internment camps, and 1950s America, as well as additional resources and websites. Booklist: “Holm impressively wraps pathos with comedy in this coming-of-age story, populated by

a cast of vivid characters.”

This is the fourth volume in an operational and chronological series covering the U.S. Marine Corps' participation in the Vietnam War. This volume details the change in focus of the III Marine Amphibious Force (III MAF), which fought in South Vietnam's northernmost corps area, I Corps. This

volume, like its predecessors, concentrates on the ground war in I Corps and III MAF's perspective of the Vietnam War as an entity. It also covers the Marine Corps participation in the advisory effort, the operations of the two Special Landing Forces of the U.S. Navy's Seventh Fleet, and the services of Marines with the staff of the U.S. Military Assistance Command, Vietnam. There are additional chapters on supporting arms and logistics, and a discussion of the Marine role in Vietnam in relation to the overall American effort. Omaha Beachhead (6 June - 13 June 1944). This book highlights the display applications of c-axis aligned crystalline indium-gallium-zinc oxide (CAAC-IGZO), a new class of oxide material that

challenges the dominance of silicon in the field of thin film semiconductor devices. It is an enabler for displays with high resolution and low power consumption, as well as high-productivity manufacturing. The applications of CAAC-IGZO focus on liquid crystal displays (LCDs) with extremely low power consumption for mobile applications, and high-resolution and flexible organic light-emitting diode (OLED) displays, and present a large number of prototypes developed at the Semiconductor Energy Laboratory. In particular, the description of LCDs includes how CAAC-IGZO enables LCDs with extremely low refresh rate that provides ultra-low power consumption in a wide range of use cases. Moreover, this book also offers the latest data of

IGZO. The IGZO has recently achieved a mobility of $65.5 \text{ cm}^2/\text{V}\cdot\text{s}$, and it is expected to potentially exceed $100 \text{ cm}^2/\text{V}\cdot\text{s}$ as high as that of LTPS. A further two books in the series will describe the fundamentals of CAAC-IGZO, and the application to LSI devices. Key features:

- Introduces different oxide semiconductor field-effect transistor designs and their impact on the reliability and performance of LCDs and OLED displays, both in pixel and panel-integrated driving circuits.
- Reviews fundamentals and presents device architectures for high-performance and flexible OLED displays, their circuit designs, and oxide semiconductors as an enabling technology.
- Explains how oxide semiconductor thin-film transistors

drastically can improve resolution and lower power consumption of LCDs.

Jazz is a vibrant and a living art, and this volume serves to remind us of that fact through interviews with Art Tatum, Maynard Ferguson, Dizzy Gillespie, and Dave Brubeck, along with almost 20 other jazz greats. Meet the greatest musicians in the history of jazz. From Hoagy Carmichael to David Sanborn, these interviews and their subjects reflect the diverse appeal and deep roots

of a truly American art form. Some of the interviews in Jazz Notes: Interviews across the Generations remain intact from their original publication. Others are updated to include conversations with younger artists, influenced by these legends and attempting to carry on their legacies. The interviews range from the 1970s to the present day and are followed by a concluding section that provides perspective from current artists. In the course of the interviews, the history of American art and culture receives interesting augmentation. Some artists, such as Dave Brubeck and Maynard Ferguson, discuss how they broke through to the top of the pop charts. Of course, many African American jazz musicians endured difficult and demeaning conditions while

on the road in the 1930s, 1940s, and 1950s, and their memories of these experiences are a bittersweet counterpoint to remembered triumphs. *Wound Care* University Press of Kentucky Based on a symposium held in 1999 during The Museum of Modern Art's retrospective, this volume presents nine critical essays offering dramatically different ways of understanding Pollock's art and influence. The essays reveal not just the richness of Pollock's work, but also the vitality and diversity of contemporary criticism. The essays were written by Robert Storr, Pepe Karmel, James Coddington and Carol Mancusi-Ungaro, Kirk Varnedoe, T. J. Clark, Jeremy Lewison, Rosalind Krauss, and Anne Wagner.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant

to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

" Among the darkest corners of Kentucky's past are the grisly feuds that tore apart the hills of Eastern Kentucky from the late nineteenth century until well into the twentieth. Now, from the tangled threads of conflicting testimony, John Ed Pearce, Kentucky's best known journalist, weaves engrossing accounts of six of the most notorious accounts to uncover what really happened and why. His story of those days of darkness

brings to light new evidence, questions commonly held beliefs about the feuds, and us and long-running feuds—those in Breathitt, Clay Harlan, Perry, Pike, and Rowan counties. What caused the feuds that left Kentucky with its lingering reputation for violence? Who were the feudists, and what forces—social, political, financial—hurled them at each other? Did Big Jim Howard really kill Governor William Goebel? Did Joe Eversole die trying to protect small mountain landowners from ruthless Eastern mineral exploiters? Did the Hatfield-McCoy fight start over a hog? For years, Pearce has interviewed descendants of feuding families and examined skimpy court records and often fictional newspaper puts to rest some of the more popular legends.

Beloved, best-selling science writer Mary Roach's "acutely entertaining, morbidly fascinating" (Susan Adams, Forbes) classic, now with a new epilogue. For two thousand years, cadavers – some willingly, some unwittingly – have been involved in science's boldest strides and

weirdest undertakings. They've tested France's first guillotines, ridden the NASA Space Shuttle, been crucified in a Parisian laboratory to test the authenticity of the Shroud of Turin, and helped solve the mystery of TWA Flight 800. For every new surgical procedure, from heart transplants to gender confirmation surgery, cadavers have helped make history in their quiet way. "Delightful—though never disrespectful" (Les Simpson, Time Out New York), Stiff investigates the strange lives of our bodies postmortem and answers the question: What should we do after we die? is.” —Tara Parker-Pope, Wall Street
