The future of theatre history studies requires consideration of theatre as a global phenomenon. The Challenge of World Theatre History offers the first full-scale argument for abandoning an obsolete and parochial Eurocentric approach to theatre history in favor of a more global perspective. This book exposes the fallacies that reinforce the conventional approach and defends the global perspective against possible objections. It moves beyond the conventional nation-based geography of theatre in favor of a regional geography and develops a new way to demarcate the periods of theatre history. Finally, the book outlines a history that recognizes the often-connected developments in theatre across Eurasia and around the world. It makes the case that world theatre history is necessary not only for itself, but for the powerful comparative and contextual insights it offers to all theatre scholars and students, whatever their special areas of interest.

Opportunities for developing innovative approaches in teaching and learning geography have been rapidly increasing in recent years. This is in part because of the spread of new technologies that allow access to geographic information and geographic geo-media resources. These new tools offer broad access to information and open data sources. They have revolutionised the way in which teachers of geography can work with pupils and students. "Education for Digital Earth" is now possible. As such, the exclusive use of traditional approaches to the teaching of geography is no longer reasonable today. The European Commission-funded network initiative, digital-earth.eu, promotes innovation and best practices in the implementation of geo-media as a digital learning environment for school learning and teaching. This book, supported by EUROGEO, analyses the main challenges facing geographical education - curriculum, methodology, teacher education and training and geospatial technologies - and illustrates different examples of the use of geoinformation in geographical education in several European countries.

Interest organizations have always assumed a prominent place in European politics because they link states with citizens, institutionalize the resolution of social conflicts, regulate important sectors of the economy and society, contribute to workable policy outcomes and socialize members into democratic politics. However, the plethora of interest group studies that exist have not consolidated our understanding of these actors. These analyses have been subject to the vagaries of different theoretical perspectives and vary greatly in their conceptual and methodological frameworks. Consequently, a not always complementary and fragmented series of findings has emerged. This book is a systematic and comprehensive effort at investigating and integrating the state of the art in European interest group research. Combining the analysis of interest group politics in the EU with

the comparative study of interest organizations, the book seeks to identify the areas about which there is consolidated knowledge, that are marked by controversies, in which considerable uncertainty exists, that have been omitted from research programs and that ought to be part of future studies.
