This book offers a practical guide to artificial intelligence (AI) techniques that are used in business. The book does not focus on AI models and algorithms, but instead provides an overview of the most popular and frequently used models in business. This allows the book to easily explain AI paradigms and concepts for business students and executives. Artificial Intelligence for Business is divided into six chapters. Chapter 1 begins with a brief introduction to AI and describes its relationship with machine learning, data science and big data analytics. Chapter 2 presents core machine learning workflow and the most effective machine learning techniques. Chapter 3 deals with deep learning, a popular technique for developing AI applications. Chapter 4 introduces recommendation engines for business and covers how to use them to be more competitive. Chapter 5 features natural language processing (NLP) for sentiment analysis focused on emotions. With the help of sentiment analysis, businesses can understand their customers better to improve their experience, which will help the businesses change their market position. Chapter 6 states potential business prospects of AI and the benefits that companies can realize by implementing AI in their processes.

Designated a Doody's Core Title! "This is a valuable resource for readers seeking basic to advanced information on measurement. It should be on the bookshelf of all researchers, and a requirement for graduate nursing students." Score: 100, 5 stars--Doody's Medical Reviews "...this book is a wonderful shelf reference for nurse researcher mentors and investigators who may need to explore content or use content to design, test, select, and evaluate instruments and methods used in measuring nurse concepts and outcomes."--Clinical Nurse Specialist This fourth edition presents everything nurses and health researchers need to know about designing, testing, selecting, and evaluating instruments and methods for measuring in nursing. Thoroughly updated, this fourth edition now contains only the latest, most cutting-edge measurement instruments that have direct applicability for nurses and health researchers in a variety of roles, including students, clinicians, educators, researchers,

administrators, and consultants. Using clear and accessible language, the authors explain in detail, and illustrate by example, how to conduct sound measurement practices that have been adequately tested for reliability and validity. This edition is enriched with topics on the leading edge of nursing and health care research, such as measurement in the digital world, biomedical instrumentation, new clinical data collection methods, and methods for measuring quality of care. Key features: Provides new and emerging strategies for testing the validity of specific measures Discusses computer-based testing: the use of Internet research and data collection Investigates methods for measuring physiological variables using biomedical instrumentation Includes information on measurement practices in clinical research, focusing on clinical data collection methods, such as clinimetrics Identifies the challenges of measuring quality of care and how to address them

Between August 1918 and March 1919 the Spanish influenza spread worldwide, claiming over 25 million lives - more people than perished in the fighting of the First World War. It proved fatal to at least a half-million Americans. Yet, the Spanish flu pandemic is largely forgotten today. In this vivid narrative, Alfred W. Crosby recounts the course of the pandemic during the panic-stricken months of 1918 and 1919, measures its impact on American society, and probes the curious loss of national memory of this cataclysmic event. This 2003 edition includes a preface discussing the then recent outbreaks of diseases, including the Asian flu and the SARS epidemic.

In het omvangrijke oeuvre van Herman Hertzberger is de bouw van scholen een van de belangrijkste opgaven. Hij bouwde tot op heden ruim dertig scholen. Volgens Hertzberger is scholenbouw vandaag de dag een van de weinige deelgebieden binnen de architectuur waarbij de ontwerper nog de menselijke condities kan bepalen en beïnvloeden. Hij stelt dat er evenwicht moet zijn tussen gebruik, functionaliteit en de architectuur van schoolgebouwen, waarbij de architectuur geïnspireerd wordt door het onderwijs. Juist met de huidige ontwikkelingen in het onderwijs, van klassikaal naar meer individueel gericht onderwijs, dienen de gebouwen steeds opnieuw bedacht te worden. De wisselwerking tussen onderwijs, onderwijssystemen en architectuur is evident. In *Ruimte en Leren* legt Hertzberger zijn ruime ervaring, kennis en opvattingen vast in een theoretische beschouwing over de ruimtelijke condities van leren.

Winner of the Margaret Mead Award A classic, moving study of terminally ill children that emphasizes their agency and shows how we can relate to dying children more honestly "The death of a child," writes Myra Bluebond-Langner, "poignantly underlines the impact of social and cultural factors on the way that we die and the way that we permit others to die." In a moving drama constructed from her observations of leukemic children, aged three to nine, in a hospital ward, she shows how the children

come to know they are dying, how and why they attempt to conceal this knowledge from their parents and the medical staff, and how these adults in turn try to conceal from the children their awareness of the child's impending death. In contrast to many parents, doctors, nurses, and social scientists who regard the children as passive recipients of adult actions, Bluebond-Langner emphasizes the children's role in initiating and maintaining the social order. Her sensitive and stirring portrait shows the children to be willful, purposeful individuals capable of creating their own worlds. The result suggests better ways of relating to dying children and enriches our understanding of the ritual behavior surrounding death.

Organization Ethics in Health Care Routledge

Compassionate communities are communities that provide assistance for those in need of end of life care, separate from any official health service provision that may already be available within the community. This idea was developed in 2005 in Allan Kellehear's seminal volume- *Compassionate Cities: Public Health and End of Life Care*. In the ensuing ten years the theoretical aspects of the idea have been continually explored, primarily rehearsing academic concerns rather than practical ones.

Compassionate Communities: Case Studies from Britain and Europe provides the first major volume describing and examining compassionate community experiments in end of life care from a highly practical perspective. Focusing on community development initiatives and practice challenges, the book offers practitioners and policy makers from the health and social care sectors practical discussions on the strengths and limitations of such initiatives. Furthermore, not limited to providing practice choices the book also offers an important and timely impetus for other practitioners and policy makers to begin thinking about developing their own possible compassionate communities. An essential read for academic, practitioner, and policy audiences in the fields of public health, community development, health social sciences, aged care, bereavement care, and hospice & palliative care, *Compassionate Communities* is one of only a handful of available books on end of life care that takes a strong health promotion and community development approach.

Once it was difficult to see end of life care beyond conventional medical intervention, but hospice and palliative care introduced a more holistic approach, providing quality of life for the dying and their families. This ground-breaking work takes end-of-life care beyond these palliative boundaries, describing a public health vision that involves whole communities adopting a compassionate approach to dying, death and loss. Written by a leading academic in the field of death and bereavement, this text outlines the historical, political and conceptual basis of compassionate cities, providing a community development model for end-of-life care. Moving away from infection control and health promotion Allan Kellehear invites us to think of a third wave movement of public health, joining empathy, equality and action together as practical policies. Presenting a radical new perspective to death, ageing and public health, *Compassionate Cities* is essential reading for academics and professionals alike.

The Handbook of Information and Computer Ethics 010 Publishers
By addressing ethical environments in health care and business organizations this book examines a new era - research in organizational ethics. This book will help decision-makers to develop and sustain organizational ethics in their firms and to think more critically about the issues that emerge within contemporary organizations. This book develops the themes that

ethics is good business; that developing and sustaining ethics relates directly to assessing ethics in organizations through research, evaluation or audit; and that decision-makers perform the role of ethical advocate in their organizations. Justice is explored as an underlying component in the development of an ethical environment. This book concludes with the role of decision-makers as ethical advocates in their organizations. Discussion is complemented by cases and examples, thereby addressing the intersection of theory and application.

This groundbreaking resource explores core issues in participatory health research (PHR) and traces its global emergence as a force for improving health and well-being, healthcare services, and quality of life. The PHR approach is defined as including community members, health practitioners, and decision-makers as co-researchers, using local knowledge to reduce disparities in care, advocate for responsive health policy, and accelerate positive change in society as a whole. The book's first half surveys themes essential to the development of the field, including evaluating PHR projects, training professionals in conducting PHR, and the ambitious work of the International Collaboration for Participatory Health Research. International perspectives showcase the varied roles of PHR in addressing urgent local health problems in their specific public health and sociocultural contexts. Among the topics covered: Demonstrating impact in participatory health research Reviewing the effectiveness of participatory health research: challenges and possible solutions Kids in Action—participatory health research with children Participatory health research: an Indian perspective Participatory health research in Latin America: scientific production on chronic diseases Participatory health research in North America: from community engagement to evidence-informed practice Participatory Health Research benefits those teaching and learning about participatory health research at institutions of higher education and in community settings, addressing diverse fields including health promotion and disease prevention, medicine and public health, quality of life, social work, and community development.

Following significant advances in deep learning and related areas interest in artificial intelligence (AI) has rapidly grown. In particular, the application of AI in drug discovery provides an opportunity to tackle challenges that previously have been difficult to solve, such as predicting properties, designing molecules and optimising synthetic routes. Artificial Intelligence in Drug Discovery aims to introduce the reader to AI and machine learning tools and techniques, and to outline specific challenges including designing new molecular structures, synthesis planning and simulation. Providing a wealth of information from leading experts in the field this book is ideal for students, postgraduates and established researchers in both industry and academia.

This book is based on research from Russia, Hungary, Bulgaria, Great Britain, Switzerland and the Czech Republic on issues related to knowledge-based economy development. The idea for this book was developed during three international conferences on digitalization: VI, VII and VIII International Scientific Weeks, organized by Samara State University of Economics (Samara, Russia) in 2018–2020. It is an initiative by the scientific and business organizations in the Samara Region and their Russian and international partners to analyze the current digitalization of

social-economic systems, the problems and perspectives of this process, and its role in the creation and development of a new type of economy and new quality of human capital. All the contributions focus on the search for effective ways of adapting to the new digital reality and are based analyses of international statistics, and data from specific companies, educational institutions and governmental development programs. The book explores a variety of topics, including • Knowledge and Information as Basic Values of a New Economic Paradigm; • Information Technologies for Ensuring Sustainable Development of Organizations; • Augmented Reality, Artificial Intelligence and Big Data in Education and Business; • Digital Platforms and the Sharing Economy; • Potential of Digital Footprints in Economies and Education; • Sociocultural Consequences of Digitalization.

In *The Arts of Cinema*, Martin Seel explores film's connections to the other arts and the qualities that distinguish it from them. In nine concise and elegantly written chapters, he explores the cinema's singular aesthetic potential and uses specific examples from a diverse range of films—from Antonioni and Hitchcock to *The Searchers* and *The Bourne Supremacy*—to demonstrate the many ways this potential can be realized. Seel's analysis provides both a new perspective on film as a comprehensive aesthetic experience and a nuanced understanding of what the medium does to us once we are in the cinema.

Ethical Challenges in Librarianship Springer Science & Business Media

Presenting real life cases from clinical practice, this book claims that children can be conceived of as moral equals without ignoring the fact that they still are children and in need of strong family relationships. Drawing upon recent advances in childhood studies and its key feature, the 'agentic child', it uncovers the ideology of adultism which has seeped into much what has been written about childhood ethics. However, this book also critically examines those positions that do accord moral equality to children but on grounds not strong enough to support their claim. It lays the groundwork for a theory of moral equality by assessing the concepts of parenthood, family, best interest, paternalism, and, above all, autonomy and trust which are so important in envisioning what we owe the child. It does not only show how children – like adults – should be considered moral agents from

infancy but also how ethical theories addressing adults can significantly profit from recognizing this. The analysis takes into account contributions from European as well as American scholars and makes use of a wide range of ethical, psychological, cultural, and social-scientific research.

This monograph summarizes the literature on AI and business model innovation. The main hypothesis is that the deployment of AI across an industry creates new mechanisms for value creation and in turn results in new firms generating value in an industry as incumbent firms may no longer be competitive as in the past - the value migration phenomenon.

For over thirty years, Hegel scholars have known that many of the views of Hegel rife in the Anglo-Saxon world are highly inaccurate. The essays collected in this volume show the myths and legends to be just that. The author has selected a set of essays that treat and effectively debunk the various Hegel myths and legends. Divided into sections addressing the various myths and augmented by Stewart's informative introduction and a bibliography, this collection should be of interest to scholars and nonspecialists alike.

"The influence of materialist ontology largely dominates philosophical and scientific discussions. However, there is a resurgent interest in alternative ontologies from panpsychism (the view that at the base of reality exists potential minds, minds, or mind-lets) to idealism and dualism (the view that all of reality is material and mental). The Routledge Handbook of Idealism and Immaterialism is an outstanding reference source and the first major collection of its kind. Historically grounded and constructively motivated, it covers the key topics in philosophy, science, and theology, providing students and scholars with a comprehensive introduction to idealism and immaterialism. Also addressed is post-materialism developments, with explicit attention to variations of idealism and immaterialism (the view that reality depends on a mind or a set of minds). Comprising forty-four chapters written by an international and interdisciplinary team of contributors, the Handbook is organised into five clear parts: Idealism and the History of Philosophy Important Figures in Idealism Systematic Assessment of Idealism and Science Idealism, Physicalism, Panpsychism, and Substance Dualism. Essential reading for students and researchers in metaphysics, philosophy of science, philosophy of religion, and philosophy of mind, The Routledge Handbook of Idealism and Immaterialism will also be of interest to those in related disciplines where idealist and immaterialist ontology impinge on history, science, and theology"--
