Analele Universității Din Timișoara Elsevier Written for the piping engineer and designer in the field, this two-part series helps to fill a void in piping literature, since the Rip Weaver books of the '90s were taken out of print at the advent of the Computer Aid Design (CAD) era. Technology may have changed, however the fundamentals of piping rules still apply in the digital representation of process piping systems. The Fundamentals of Piping Design is an introduction to the design of piping systems, various processes and the layout of pipe work connecting the major items of equipment for the new hire, the engineering student and the veteran engineer needing a reference. DIN-Normen in der Verfahrenstechnik Beuth Verlag The objective of this book is to assist scientists and engineers select the ideal material or manufacturing process for particular applications; these could cover a wide range of fields, from light-weight structures to electronic hardware. The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can, by analogy, be applied to other industries. Difficult-to-find material data is included for reference. The sciences of metallic (primarily) and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes, which involve quality, material and processes evaluations, and the selection of mechanical and component parts. In this successor edition, which has been revised and updated, engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs. Space hardware captured by astronauts and returned to Earth from long durations in space are examined. Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics, medical equipment and ground transportation. This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering. It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.
Supplement to the Official Journal of the European Communities John Wiley & Sons Khurram Shah Jahan, a title meaning King of the World , ruled the Mughal Empire from 1628 to 1659. His reign marked the cultural zenith of the Mughal dynasty: a period of multiculturalism, poetry, fine art and stupendous architecture. His legacy in stone embraces not only the Taj Mahal the tomb of his beloved second wife, Anjumand Mumtaz Mahal but fortresses, mosques, gardens, carvanserais and schools. But Shah Jahan was also a ruthless political operator, who only achieved power by ordering the murder of two brothers and at least six other relatives, one of them the legitimately crowned Emperor Dawar Baksh. This is the story of an enlightened despot, a king who dispensed largesse to favoured courtiers but ignored plague in the countryside. Fergus Nicholl has reconstructed this intriguing tale from contemporary biographies, edicts and correspondence. He has also traveled widely through India and Pakistan to follow in Shah Jahan's footsteps and put together an original portrait that challenges many established legends to bring the man and the emperor to life.	<u>SINCONA Auction 85</u> Woodhead Publishing Limited Der vorliegende Leitfaden zum DIN-Fachbericht 103 "Stahlbrücken" ist im Auftrag des BMVBW, der Bundesanstalt für Straßenwesen (BASt) und der Deutschen Bahn AG (DB-AG) bearbeitet worden und enthält Hintergrundinformationen zum Verständnis der Regelungen im DIN-FB 103 und Ergänzungen zum DIN-FB 103 durch Hinweise auf Weiterentwicklungen bei der Überführung in die EN-Normen.

This book examines the Mawlid from its origins to the present day and provides a new insight into how an aspect of everyday Islamic piety has been transformed by modernity. The book gives a window into the religious lives of medieval Muslim women, rather than focusing on the limitations that were placed on them and shows how medieval popular Islam was coherent and meaningful, not just a set of deviations from scholarly norms. Concise in both historical and textual analysis, this book is an important contribution to our understanding of contemporary Muslim devotional practices and will be of great interest to postgraduate students and researchers of Islam, religious studies and medieval studies.
