This book presents the theoretical background as well as best practice examples of estimating in heavy construction. The examples stem from practitioners in international large-scale construction projects. As distinct from other publications on estimating, this book presents specific numbers and costs are calculated precisely. In this way the book helps to avoid errors

in the estimating of construction projects like roads, bridges, tunnels, and foundations.

Thankfully, Green does—and in this incredibly helpful book, she tackles the tough discussions you may need

to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit "reply all" • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party Praise for Ask a Manager "A must-read for anyone who works . . . [Alison Green's] advice boils down to the idea that you should be professional (even when others are not) and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work."—Booklist (starred review) "The author's friendly, warm, no-nonsense writing is a pleasure to read, and her advice can be widely applied to relationships in all areas of readers' lives. Ideal for anyone new to the job market or new to management, or anyone hoping to improve their work experience."—Library Journal (starred review) "I

am a huge fan of Alison Green's Ask a Manager column. This book is even better. It teaches us how to deal with many of the most vexing big and little problems in our workplaces—and to do so with grace, confidence, and a sense of humor.”—Robert Sutton, Stanford professor and author of *The No Asshole Rule* and *The Asshole Survival Guide* “Ask a Manager is the ultimate playbook for navigating the traditional workforce in a diplomatic but firm way.”—Erin Lowry, author of *Broke Millennial: Stop Scraping By and Get Your Financial Life Together* *Advanced Geotechnical Engineering* CRC Press Building infrastructure projects can be complex and challenging. *Building Big – Art of Passionately Delivering World Class Infrastructure Projects* the HCC Way is a compilation of case studies and project experiences. The book can be used as a reference manual by professionals in the construction industry. It has twenty-one chapters and covers various sectors of the infrastructure – hydropower projects, tunnels, breakwater, water supply pipelines, nuclear reactors, etc.

The Author is a Chartered Quantity Surveyor, Arbitrator and Certified Construction Auditor with over 40 years of experience in the construction field. He had the habit of working in the Middle East for a year,

take a vacation for one year to rest with the family and then take another job. This cycle continued for about 20 years till he finally settled down in a prestigious Government establishment. This resulted in many interviews and some of the successful interview experiences, which are real, unique and first hand are given in this book. In addition to his interview experiences, owing to the wide exposure to the construction industry, he is fully aware of the requirements that the Employers look in order to have a perfect or good fix. The Employers concerns such as Why should we hire you? What can you do for us that other candidates can't? What are your key strength and weakness? are addressed in this book. Facing Interview/s is a present day necessity to secure a job. Therefore this book should be in every home. The book can also serve as an ideal gift. These proceedings contain the papers presented at the Third International Conference and Exhibition on Engineering Software held at Imperial College, London during the period April 11th - 13th, 1983. I must thank again the authors who submitted the large numbers of papers which made

selection a difficult task. The theme of the conference is the use and application of computers in engineering. Many abbreviations have been invented to describe the use of computers from CAD, CAM, CADMAT etc. but the term which best describes the scope of the conference is Computer Aided Engineering, CAE. The papers have been split into sections covering different application areas such as Mechanical Engineering, Civil Engineering. Other sections cover techniques such as Finite Elements, Boundary Elements and General Simulation. An important session at the conference was the new field of engineering databases and as in past conferences the special sessions were devoted to microcomputers. R.A. ADEY (EDITOR)
