In a tough opening statement, M. Brewster Smith outlines his own life course and contrasts it with the agenda of social psychology in the present professional moment. "Today's journals, textbooks, and conferences represent a vigorous but narrow scientific specialty in psychology, the practitioners of which are more closely focused on agendas that are primarily and often only intelligible within the subdiscipline than was the case when I formed my identity as a psychologist." In contrast, Smith sees himself, and has long been seen by others, as a social psychologist in the tradition of Gordon Allport, Gardner and Lois Murphy, Kurt Lewin, and Muzaffer Sherif. Smith's unique ability has been to contribute to the emergence of personality as a differentiated academic field and at the same time maintain strong interdisciplinary ties to a variety of fields ranging from sociology to philosophy. In recent years, such concerns have made the author a central figure in the development of Humanistic Psychology as a part of the American Psychological Association. Because of these wide ranging concerns, the major statements of Brewster Smith have appeared in diverse places. Here, brought into a unified and uniform frame of reference, one has his work on values and selfhood, humanistic psychology and the social sciences, and humanism and social issues brought together for the first time. The picture is of a major thinker who is at home in the details of psychology and in the broad areas of public interest and social policy. Brewster Smith discusses major issues in terms of the political processes involved in the public interest. These range from the issue of advocacy within social research to conceptualizing anew familiar issues within psychology. For the generalist interested in the broader meanings of social psychology to the specialist aiming to recapture the big issues with which the field was once identified, this is a must volume.

The importance of personal storytelling in contemporary culture and politics In an age where our experiences are processed and filtered through a wide variety of mediums, both digital and physical, how do we tell our own story? How do we "get a life," make sense of who we are and the way we live, and communicate that to others? *Stories of the Self* takes the literary study of autobiography and opens it up to a broad and fascinating range of material practices beyond the book, investigating the manifold ways people are documenting themselves in contemporary culture. Anna Poletti explores Andy Warhol's Time Capsules, a collection of six hundred cardboard boxes filled with text objects from the artist's everyday life; the mid-aughts crowdsourced digital archive PostSecret; queer zine culture and its practices of remixing and collaging; and the bureaucratic processes surrounding surveillance dossiers. *Stories of the Self* argues that while there is a strong emphasis on the importance of personal storytelling in contemporary culture and politics, mediation is just as important in establishing the credibility and legibility of life writing. Poletti argues that the very media used for writing our lives intrinsically shapes how we are seen to matter.

This book presents a collection of annotated English translations of German diplomatic documents—including telegrams, dispatches and reports—sent to the Foreign Office in Berlin and the German Ambassador in Hankou, China, by German diplomatic officials in Nanjing, and detailing Japanese atrocities and the conditions in and around Nanjing during the early months of 1938. The author visited the German Federal Archives (Bundesarchiv) and the German Foreign Ministry Archives (Auswärtiges Amt Archiv) in Berlin, where these documents are currently archived, in 2008, 2016, and 2017 to locate and retrieve them. These diplomatic documents are of significant value in that they provide both detailed information and wide coverage, from different locations and on various topics. Further, the information offered is unique in a number of ways. First, the events were recorded from the perspective of Germans, citizens of a country that was a close ally of Japan, and second, these documents are not included in any other source. As such, these archival primary sources represent an invaluable addition to the research literature on the Nanjing Massacre and will undoubtedly benefit researchers and scholars for generations to come.

While almost everyone has heard of human rights, few will have reflected in depth on what human rights are, where they originate from and what they mean. A Philosophical Introduction to Human Rights – accessibly written without being superficial – addresses these questions and provides a multifaceted introduction to legal philosophy. The point of departure is the famous 1948 Universal Declaration of Human Rights, which provides a frame for engagement with western legal philosophy. Thomas Mertens sketches the philosophical and historical background of the Declaration, discusses the ten most important human rights with the help of key philosophers, and ends by reflecting on the relationship between rights and duties. The basso continuo of the book is a particular world view derived from Immanuel Kant. 'Unsocial sociability' is what characterises humans, i.e. the tension between man's individual and social nature. Some human rights emphasize the first, others the second aspect. The tension between these two aspects plays a fundamental role in how human rights are interpreted and applied.

Epicurus on the Self reconstructs a part of Epicurean ethics which only survives on the fragmentary papyrus rolls excavated from an ancient library in Herculaneum, On Nature XXV. The aim of this book is to contribute to a deeper understanding of Epicurus' moral psychology, ethics and of its robust epistemological framework. The book also explores how the notion of the self emerges in Epicurus' struggle to express the individual perspective of oneself in the process of one's holistic self-reflection as an individual psychophysical being.

Helps both engineers and students improve their writing skills by learning to analyze target audience, tone, and purpose in order to effectively write technical documents This book introduces

students and practicing engineers to all the components of writing in the workplace. It teaches readers how considerations of audience and purpose govern the structure of their documents within particular work settings. The IEEE Guide to Writing in the Engineering and Technical Fields is broken up into two sections: “Writing in Engineering Organizations” and “What Can You Do With Writing?” The first section helps readers approach their writing in a logical and persuasive way as well as analyze their purpose for writing. The second section demonstrates how to distinguish rhetorical situations and the generic forms to inform, train, persuade, and collaborate. The emergence of the global workplace has brought with it an increasingly important role for effective technical communication. Engineers more often need to work in cross-functional teams with people in different disciplines, in different countries, and in different parts of the world. Engineers must know how to communicate in a rapidly evolving global environment, as both practitioners of global English and developers of technical documents. Effective communication is critical in these settings. The IEEE Guide to Writing in the Engineering and Technical Fields Addresses the increasing demand for technical writing courses geared toward engineers Allows readers to perfect their writing skills in order to present knowledge and ideas to clients, government, and general public Covers topics most important to the working engineer, and includes sample documents Includes a companion website that offers engineering documents based on real projects The IEEE Guide to Engineering Communication is a handbook developed specifically for engineers and engineering students. Using an argumentation framework, the handbook presents information about forms of engineering communication in a clear and accessible format. This book introduces both forms that are characteristic of the engineering workplace and principles of logic and rhetoric that underlie these forms. As a result, students and practicing engineers can improve their writing in any situation they encounter, because they can use these principles to analyze audience, purpose, tone, and form.

Pattern Recognition by Self-Organizing Neural Networks presents the most recent advances in an area of research that is becoming vitally important in the fields of cognitive science, neuroscience, artificial intelligence, and neural networks in general. The 19 articles take up developments in competitive learning and computational maps, adaptive resonance theory, and specialized architectures and biological connections. Introductory survey articles provide a framework for understanding the many models involved in various approaches to studying neural networks. These are followed in Part 2 by articles that form the foundation for models of competitive learning and computational mapping, and recent articles by Kohonen, applying them to problems in speech recognition, and by Hecht-Nielsen, applying them to problems in designing adaptive lookup tables. Articles in Part 3 focus on adaptive resonance theory (ART) networks, self-organizing pattern recognition systems whose top-down template feedback signals guarantee their stable learning in response to arbitrary sequences of input patterns. In Part 4, articles describe embedding ART modules into larger architectures and provide experimental evidence from neurophysiology, event-related potentials, and psychology that support the prediction that ART mechanisms exist in the brain. Contributors: J.-P. Banquet, G.A. Carpenter, S. Grossberg, R. Hecht-Nielsen, T. Kohonen, B. Kosko, T.W. Ryan, N.A. Schmajuk, W. Singer, D. Stork, C. von der Malsburg, C.L. Winter.
