A Kirkus Best Book of 2016 Oncologist and cancer gene hunter Theo Ross delivers the first authoritative, go-to for people facing a genetic predisposition for cancer. There are 13 million people with cancer in the United States, and it's estimated that about 1.3 million of these cases are hereditary. Yet despite advanced training in cancer genetics and years of practicing medicine, Dr. Theo Ross was never certain whether the history of cancers in her family was simple bad luck or a sign that they were carriers of a cancer-causing genetic mutation. Then she was diagnosed with melanoma, and for someone with a dark complexion, melanoma made no sense. It turned out there was a genetic factor at work. Using her own family's story, the latest science of cancer genetics, and her experience as a practicing physician, Ross shows readers how to spot the patterns of inherited cancer, how to get tested for cancer-causing genes, and what to do if you have one. With a foreword by Siddhartha Mukherjee, prize winning author of *The Emperor of All Maladies*, this will be the first authoritative, go-to for people facing inherited cancer, this book empowers readers to face their genetic heritage without fear and to make decisions that will keep them and their families healthy.

Policing is at a crossroads. At a time of unprecedented cuts and increasing levels of demand, the British police service (like many others) faces enormous challenges. Under the most radical reforms

the service has ever experienced, its leadership is looking for new approaches that can maintain levels of service delivery and secure efficiency, accountability and public confidence. Recent history shows that applying private sector business models to the public sector often generates hidden costs and unintended consequences that damage productivity and morale. In spite of this evidence, reform programmes and prevailing management practices still seek to enforce approaches that have demonstrably failed. In *Intelligent Policing*, Simon Guilfoyle proposes a simple and elegant solution that refocuses organisational activity on the service user. Drawing on his own experience as a police officer, he uses a range of evidence to explore the possibilities that systems thinking offers. He clearly outlines how a systems-based approach can bring greater efficiency, improved service delivery, enhanced morale and reduced cost. He shows that the practices and models proposed in the book can be implemented immediately and insists that senior police leaders and policy makers have an ideal opportunity to make lasting improvements today that will resonate throughout policing and leave a positive legacy for the future.. *Intelligent Policing* is a rich resource for those - in the UK and around the world - who care about delivering an effective policing service in the 21st Century. It will also interest systems theorists for its practical approach to policing and inform academic debate in the fields of management and human behaviour.
