THE NEW YORK TIMES BESTSELLER In her enthralling debut, Gilly Macmillan explores a mother's search for her missing son, weaving a taut psychological thriller as gripping and skillful as *The Girl on the Train* and *The Guilty One*. In a heartbeat, everything changes... Rachel Jenner is

walking in a Bristol park with her eight-year-old son, Ben, when he asks if he can run ahead. It's an ordinary request on an ordinary Sunday afternoon, and Rachel has no reason to worry—until Ben vanishes. Police are called, search parties go out, and Rachel, already insecure after her recent divorce, feels herself coming undone. As hours and then days pass without a sign of Ben, everyone who knew him is called into question, from Rachel's newly married ex-husband to her mother-of-the-year sister. Inevitably, media attention focuses on Rachel too, and the public's attitude toward her begins to shift from sympathy to suspicion. As she desperately pieces together the threadbare clues, Rachel realizes that nothing is quite as she imagined it to be, not even her own judgment. And the greatest dangers may lie not in the anonymous strangers of every parent's nightmares, but behind the familiar smiles of those she trusts the most. Where is Ben? The clock is ticking...

The definitive source for the groundbreaking ideas of the "Spectrum of Teaching Styles" introduced by Mosston and Ashworth and developed during 35 years in the field. This book offers teachers a foundation for understanding the decision-making structures that exist in all teaching/learning environments and for recognizing the variables that increase effectiveness while teaching physical education. In this thoroughly revised and streamlined edition, all chapters have been updated to include hundreds of real-world examples, concise charts, practical forms, and concrete suggestions for "deliberate teaching" so that teachers can understand their classrooms' flow of events, analyze decision structures, implement adjustments that are appropriate for particular classroom situations, and deliberately combine styles to achieve effective variations. As in prior editions, individual chapters describe the anatomy of the decision structure as it relates to teachers and learners, the objectives (O-T-L-O) of each style, and the

application of each style to various activities and educational goals. For physical education teachers.

Farrar, Straus and Giroux (Byr)

This unique and ground-breaking book is the result of 15 years research and syntheses over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the

influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

"Gripping and breathless, Into the Sublime is equal parts terrifying, claustrophobic, psychological, and cunning." —Wendy Heard, author of *She's Too Pretty to Burn* and *Dead End Girls* A new YA psychological thriller from Kate A. Boorman, author of *What We Buried*, about four teenage girls who descend into a dangerous underground cave system in search of a lake of local legend, said to reveal your deepest fears. When the cops arrive, only a few things are clear: - Four girls entered a dangerous cave. - Three of them came out alive. - Two of them were rushed to the hospital. - And one is soaked in blood and ready to talk. Amelie Desmarais' story begins believably enough: Four girls from a now-defunct thrill-seeking group planned an epic adventure to find a lake that Colorado locals call "The Sublime." Legend has it that the lake has the power to change things for those who risk—and survive—its cavernous depths. They each had their reasons for going. For Amelie, it was a promise kept to her beloved cousin, who recently suffered a tragic accident during

one of the group's dares. But as her account unwinds, and the girls' personalities and motives are drawn, things get complicated. Amelie is hardly the thrill-seeking type, and it appears she's not the only one with the ability to deceive. Worse yet, Amelie is covered in someone's blood, but whose exactly? And where's the fourth girl? Is Amelie spinning a tale to cover her guilt? Or was something inexplicable waiting for the girls down there? Amelie's the only one with answers, and she's insisting on an explanation that is more horror-fantasy than reality. Maybe the truth lies somewhere in between? After all, strange things inhabit dark places. And sometimes we bring the dark with us.

Named a Best Book of 2020 by Time Magazine, The Los Angeles Times, NPR, Vulture, The New Yorker, and Kirkus *Grappling with motherhood, economic anxiety, rage, and the limits of language, Want* is a fiercely personal novel that vibrates with anger, insight, and love. Elizabeth is tired. Years after coming to New York to try to build a life, she has found herself with two kids, a husband, two jobs, a PhD—and now they're filing for bankruptcy. As she tries to balance her dream and the impossibility of striving toward it while her work and home lives feel poised to fall apart, she wakes at ungodly hours to run miles by the icy river, struggling to quiet her thoughts. When she reaches out to Sasha, her long-lost childhood friend, it feels almost harmless—one of those innocuous ruptures that exist online, in texts. But her timing is uncanny. Sasha is facing a crisis, too, and perhaps after years apart, their shared moments of crux can bring them back into each other's lives. In *Want*, Lynn Steger Strong explores the subtle violences enacted on a certain type of woman when she dares to want things—and all the various violences in which she implicates herself as she tries to survive.

Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

Think Level 1 Teacher's Book

For Your Own Good, the contemporary classic exploring the serious if not gravely dangerous consequences parental cruelty can bring to bear on children everywhere, is one of the central works by Alice Miller, the celebrated Swiss psychoanalyst. With her typically lucid, strong, and poetic language, Miller investigates the personal stories and case histories of various self-destructive and/or violent individuals to expand on her theories about the long-term affects of abusive child-rearing. Her conclusions—on what sort of parenting can create a drug addict, or a murderer, or a Hitler—offer much insight, and make a good deal of sense, while also straying far from psychoanalytic dogma about human nature, which Miller vehemently rejects. This important study paints a shocking

picture of the violent world—indeed, of the ever-more-violent world—that each generation helps to create when traditional upbringing, with its hidden cruelty, is perpetuated. The book also presents readers with useful solutions in this regard—namely, to resensitize the victimized child who has been trapped within the adult, and to unlock the emotional life that has been frozen in repression.

In the 1990s reported autism cases among American children began spiking, from about 1 in 10,000 in 1987 to a shocking 1 in 166 today. This trend coincided with the addition of several new shots to the nation's already crowded vaccination

schedule, grouped together and given soon after birth or in the early months of infancy. Most of these shots contained a little-known preservative called thimerosal, which includes a quantity of the toxin mercury. *Evidence of Harm* explores the heated controversy over what many parents, physicians, public officials, and educators have called an "epidemic" of afflicted children. Following several families, David Kirby traces their struggle to understand how and why their once-healthy kids rapidly descended into silence or disturbed behavior, often accompanied by severe physical illness. Alarmed by the levels of mercury in the vaccine schedule, these families sought answers from their doctors, from science, from pharmaceutical companies that manufacture vaccines, and finally from the Center for Disease Control and the Food and Drug Administration—to no avail. But as they dug deeper, the families also found powerful allies in Congress and in the small community of physicians and researchers who believe that the rise of autism and other disorders is linked to toxic levels of mercury that accumulate in the systems of some children. An important and troubling book, *Evidence of Harm* reveals both the public and unsung obstacles faced by desperate families who have been opposed by the combined power of the federal government, health agencies, and pharmaceutical giants. From closed meetings of the FDA, CDC, and drug companies, to the mysterious rider inserted into the 2002 Homeland Security Bill that would bar thimerosal litigation, to open hearings held by Congress, this book shows a medical establishment determined to deny "evidence of harm" that might be connected with thimerosal and mercury in vaccines. In the end, as research is beginning to demonstrate, the questions raised by these families have significant implications for all children, and for those entrusted to oversee our national health.
