In "Trading in the Shadow of the Smart Money" Gavin discusses why market manipulation is actually a good thing for traders and investors who can read the chart correctly based on universal

laws. All markets work because they are governed by three universal laws, which are the law of supply and demand, the law of cause and effect and the law of effort versus result. To make money in life there is a fourth and very important law, the law of attraction, and for the first time in any book on trading that we are aware of Gavin unlocks the key to success in trading and investing in the markets: BELIEF in your human ability to make money and in your system to read charts.

Markets in Profile explores the confluence of three disparate philosophical frameworks: the Market Profile, behavioral finance, and neuroeconomics in order to present a unified theory of how markets work. The Market Profile is an ever-evolving, multidimensional graphic that gives visual form to the market's continuing auction process, revealing the myriad underlying dynamics that influence market activity. Behavioral finance posits that investors are driven more by emotional factors and the subjective interpretation of minutia than by "rationality" when making investment decisions. And neuroeconomics is the study of how investor psychology permeates and affects the financial markets. Mr. Dalton explicates the ways in which irrational human behavior influences the market's natural auction process, creating frequently predictable market structure, which results in opportunities for investors to ameliorate risk. The book will improve investors ability to interpret change in markets, enabling better, more confident investment decisions.
