EMMALEE TRISTIAN

Pawsitive selection Xlibris Corporation
 "'The Genetic Connection' is a complete guide to breed-related medical problems in purebred dogs and cats.

Comprehensive but conveniently divided by body systems, this book presents conditions by breed, genetic testing availability, and prevalence data, as well as a new chapter dedicated to feline breed-related genetic disorders." - From back cover.

Dog Behavior Minnesota Extension Service

The findings of a decade of further investigation into the genetics of dog breeding have been incorporated into this new edition of a classic source of information for breeders. Early chapters outline the basic principles of heredity, illustrated by examples from the dog. Modern methods of animal improvement which can be called upon to further the aims of dog breeding are also discussed. The chapters on colour and coat variation, genetics of breeds, and abnormalities have been extensively rewritten in the light of new findings. Many outstanding problems of breed genotypes have been resolved, but at

the same time numerous genetic anomalies have been identified through greater genetic awareness and attempts to secure breeding data. The descriptive summaries of these abnormalities, substantially documented, make this book a useful reference source for the identification of known genetic anomalies.

Practical Dog Breeding and Genetics
 Xlibris Corporation

This book (Dogue de Bordeaux) provides you with a through description and positive attributes of this breed including origin, purpose, history, normal heights and weights, acceptable colors and behavioral traits. Our books differ from most books on dog breeds because this book also provides you with a comprehensive and authoritative source of all the known predisposed hereditary health syndromes for the breed. You will find extensive references for each problem described. We also provide the breed club address for this breed and a list of laboratories and organizations that can provide professional help and information. As a small animal veterinarian, I have always been intrigued by the way dogs have been bred to fill a purpose in life and further impressed that they also tend to love performing that service. Greyhounds and

other sight hounds are built for speed with aerodynamic bodies consisting of small head, deep chest, narrow waist and large leg muscles. On the other hand Dachshunds take their name from German words meaning “badger dog” and they use their long nose, long body and short legs to both track, enter and dig into badger dens. After developing a practice that catered to clients with show dogs, my interest in each breed continued to grow as I studied and observed more and more about the unique predisposition and incidence of health problems in each breed. Breeders of purebred dogs for show were a challenge and inspirational for me to research and help them with their unique health problems. Historically references to hereditary problems are scattered throughout various Veterinary medical texts and journals such as ophthalmology, neurology, gastroenterology, cardiovascular and dermatology. This book, as well as the other books and articles I have written, is researched and compiled with the intention to provide both veterinarians and dog owners with comprehensive and authoritative predisposition information under the breed name. At the date of this publication, The American Kennel Club Canine Health Foundation and the The Kennel Club of England reports over 400 known hereditary health syndromes throughout the dog kingdom. At the writing of my first book in 1983, less than 50 hereditary issues are able to be predicted and or diagnosed. Sequencing of the canine genome, DNA tests, metabolic testing including blood tests and urine testing; plus, phenotypic examinations such as radiographs, ultrasound, and CERF or OFA eye registry exams by a Board Certified Veterinary Ophthalmologist have

advanced the science of breed related health and behavioral problems. This book will provide veterinarians, researchers, pet owners and breeders with a comprehensive guide to all the known problems veterinarians and dog owners should consider during pet selection and throughout each life stage of our canine friends.

Medical, Genetic and Behavioral Risk Factors of Purebred Dogs Blue Ribbon Books

This book (Shih Tzus Chapter) provides you with a through description and positive attributes of this breed including origin, purpose, history, normal heights and weights, acceptable colors and behavioral traits. Our books differ from most books on dog breeds because this book also provides you with a comprehensive and authoritative source of all the known predisposed hereditary health syndromes for the breed. Medical, Genetic and Behavioral Risk Factors in Purebred Dogs Read Books Ltd

Dr. Battaglia has a keen power of observation, and understanding of dog structure, movement, and genetic selection. This, combined with his ability to communicate in a clear and articulate manner provides the reader with the tools needed to make informed breeding decisions. Jerold S Bell, DVM, Clinical Associate Professor of Genetics Department of Clinical Sciences, Tufts Cummings School of Veterinary Medicine Dr. Battaglia has written a thoroughly researched treatise that is sure to become the bible of all serious breeders. He takes the complicated topic of breeding better dogs through research and genetics and explains the subject in terms that any layman can understand. If you want to understand how to

improve your breeding program, "Breeding Dogs to Win" is essential reading Tom Grabe, Publisher, The Canine Chronicle Dr. Battaglia, in his book "Breeding Dogs to Win", has created a renaissance product, covering the spectrum from the principles of Mendelian genetics to the practical concepts of a good canine breeding program. The book is very readable because he has avoided the jargon of both scientists and dog breeders. There is something for everyone interested in breeding better dogs. His breeding program sets the standard for those serious about producing the best puppies possible. Ralph J. Graff, M.D., Director of Histocompatibility and Immunogenetics Laboratory Saint Louis University Medical Center Carmelo Louis Battaglia is the author of *Breeding Better Dogs and Genetics*, *How to Breed Better Dogs*. He lives in Roswell Georgia where he continues to breed and do his research.
