World's End Harem Vol. 3
 Seven Seas Entertainment
 This volume six of the Carlsberg Papyri series contains the edition of a

new manuscript with Petese Stories from the Tebtunis temple library, dating to the period around 100 AD. The Petese Stories is a compilation of seventy stories about the virtues and vices of women. The numerous stories were compiled on the orders of the prophet Petese of Heliopolis that they may serve as a literary testament by which he would be remembered. Petese was, according to literary tradition, Plato's Egyptian instructor in astrology. The

composition seems to have been modeled on the fundamental Myth of the Sun's Eye. The overall structural pattern of the text is very similar to the Arabian Nights; a frame story forms the introduction as well as the fabric into which the long series of shorter tales are woven. Among the stories preserved in the new manuscript one is particularly remarkable in that it is known from a translation by Herodotus, the so-called Pheros Story.

We live in a highly
connected world with
multiple self-interested
agents interacting and
myriad opportunities for
conflict and cooperation.
The goal of game theory
is to understand these
opportunities. This book
presents a rigorous
introduction to the
mathematics of game
theory without losing
sight of the joy of the
subject. This is done by
focusing on theoretical

highlights (e.g., at least
six Nobel Prize winning
results are developed
from scratch) and by
presenting exciting
connections of game
theory to other fields such
as computer science
(algorithmic game
theory), economics
(auctions and matching
markets), social choice
(voting theory), biology
(signaling and
evolutionary stability),
and learning theory. Both
classical topics, such as
zero-sum games, and
modern topics, such as

auctions, are covered. Along the way, beautiful mathematical tools used in game theory are introduced, including convexity, fixed-point theorems, and probabilistic arguments. The book is appropriate for a first course in game theory at either the undergraduate or graduate level, whether in mathematics, economics, computer science, or statistics. The importance of game-theoretic thinking transcends the academic setting—for every action we take, we must

consider not only its direct effects, but also how it influences the incentives of others.
