This review provides an appraisal of existing, state-of-the-art fish identification (ID) tools (including some in the initial stages of their development) and shows their potential for providing the right solution in different real-life situations. The ID tools reviewed are: Use of scientific experts (taxonomists) and folk local experts, taxonomic reference collections, image recognition systems,

field guides based on dichotomous keys; interactive electronic keys (e.g. IPOFIS), morphometrics (e.g. IPez), scale and otolith morphology, genetic methods (Single nucleotide polymorphisms [SNPs] and Barcode [BOL]) and Hydroacoustics. The review is based on the results and recommendations of the workshop "Fish Identification Tools for Fishery Biodiversity and Fisheries Assessments," convened by FAO FishFinder and the University of Vigo and held in Vigo, Spain, from 11 to 13 October 2011. It is expected that it will help fisheries managers, environmental administrators and other end users to select the best available species identification tools for their purposes.--

Thennla is a fantasy setting for the Mythras game system. Encircled by the Outer Ocean, watched by the God of the Sun and the Goddess of the Moon, Thennla's continents reveal themselves. The jungles of Jandekot; the vast deserts of Rasputana; and there, in the east, the Moon Goddess Jekkara anchored over it, is Taygus, land of plains and hills, the great inland sea and teeming civilisations. Here empires are born: Korantia, fading now, but defiant, its city-states each a goddess incarnate; the Jekkarenes, oldest of all civilisations, and blessed by the Moon Goddess; and now the Taskan Empire, overturning centuries of tradition with new ideas, ruled by a god-emperor and his avatar, the Iron Simulacrum. And watching closely is Assabia, a land of cruel rites and cunning sorcerers.

The World of Thennla sourcebook is available as a paperback (or as a free PDF) resource for Mythras - a campaign world that is open for exploration and adventure. It includes an overview of the world, centering on Taygus, and describes the magic of the place, and how to create Thennlan characters. More information is given in the supplements Shores of Korantia and The Taskan Empire, but this is an ideal introduction for Games Masters and players who want a magic-rich world of high adventure, with the flavours of classical Greece, Rome, Persia and Byzantium. The Thennla sourcebook will get you started and wanting to learning more. It will inspire you to create your own adventures and develop the cultures outline in its pages.If you already have Shores of Korantia or The Taskan Empire, this booklet is not essential, although it may prove a useful gazeteer for players.

"In Defeating the U-boat: Inventing Antisubmarine Warfare, Newport Paper 36, Jan. S. Breemer tells the story of the British response to the German submarine threat. His account of Germany's 'asymmetric' challenge (to use the contemporary term) to Britain's naval mastery holds important lessons for the United States today, the U.S. Navy in particular. The Royal Navy's obstinate refusal to consider seriously the option of convoying merchant vessels, which turned out to be key to the solution of the U-boat problem, demonstrates the extent to which professional military cultures can thwart technical and operational innovation even in circumstances of existential threat. Although historical controversy continues to cloud this issue, ... Breemer ends his lively and informative study with some general reflections on military innovation and the requirements for fostering it."--Foreword.

The RV Dr Fridtjof Nansen in the Western Indian Ocean Food & Agriculture Org.

The fishing industry benefits the people and economies of the Pacific in various ways but the full value of these benefits is not reflected in the region's statistics. Records may be maintained but they are not complete, or accurate, or comparable. The research summarized in this report reaffirms the importance of this sector to the economies and societies of the Pacific island countries. The research reveals that the full value of fisheries is likely to have eluded statisticians, and therefore fisheries authorities, government decision makers, and donors. But its value has never escaped the fisher, fish trader, and fish processor. The difference in appreciation between public and private individuals must raise the question of whether fisheries are receiving adequate attention from the public sector--including the necessary management and protection, appropriate research, development, extension and training, and sufficient investment.

"At the height of the U.S. Navy's involvement in the Vietnam War, the Navy's coastal and riverine forces included more than 30,000 Sailors and over 350 patrol vessels ranging in size from riverboats to destroyers. These forces developed the most extensive maritime blockade in modern naval history and fought pitched battles against Viet Cong units in the Mekong Delta and elsewhere. War in the Shallows explores the operations of the Navy's three inshore task forces from 1965 to 1968. It also delves into other themes such as basing, technology, tactics, and command and control. Finally, using oral history interviews, it reconstructs deckplate life in South Vietnam, focusing in particular on combat waged by ordinary Sailors. Vietnam was the bloodiest war in recent naval history and War in the Shallows strives above all else to provide insight into the men who fought it and honor their service and sacrifice"--Publisher description
