Available as an ebook, Reeds Nautical Almanac is provided in Web PDF (ePDF) format for viewing on all compatible devices (including tablets, laptop and desktop computers). Reeds Nautical

Almanac is the indispensable trusted annual compendium of navigational data for yachtsmen and motorboaters, and provides all the information required to navigate Atlantic coastal waters around the whole of the UK, Ireland, Channel Islands and the entire European coastline from the tip of Denmark right down to Gibraltar, Northern Morocco, the Azores and Madeira. The 2019 edition continues the Almanac's tradition of year on year improvement and meticulous presentation of all the data required for safe navigation. Now with an improved layout for easier reference and with over 45,000 annual changes, it is regarded as the bible of almanacs for anyone going to sea. The 2019 edition is updated throughout, containing over 45,000 changes, and includes: 700 harbour chartlets; tide tables and tidal streams; buoyage and lights; 7,500 waypoints; invaluable passage notes; distance tables; radio, weather and safety information; first aid section. The ebook incorporates the Reeds

Marina Guide. Also available: free supplements of up-to-date navigation changes from January to June at:

The seaman's new guide, revised by J.S. Hobbs Lloyd's Register

This new Royal Cruising Club Pilotage Foundation title is the successor to Brian Navin's cruising guide to the area, covering the exposed North Sea coasts and the more protected Baltic Sea coasts of both Germany and Denmark. Coverage has been updated and expanded from specific routes to a comprehensive sequence of ports and anchorages along each area of coast, with introductory information about places of interest to visit ashore. Author Nicholas Hill cruised the region extensively for many years and has enriched the text with new photographs throughout. Plans include up to date hydrographic data for both German and Danish waters. This cruising guide is an ideal companion for those who plan to explore the more challenging, shifting coastline of the North Sea and the comparatively gentle and intricate indentations and archipelagos in the entrance to the Baltic. It is also a useful resource for anyone sailing on a more direct passage through to the Baltic Sea proper.

Renewable energy resources now play an essential role in the energy supply debate, and especially a new interest in wind energy has resulted in the intensified construction of wind farms. Thanks to the growing demand for renewable energy, offshore wind farms (OWFs) are increasingly gaining in popularity, since yields over sea are greater and more reliable than over land. Against this background it is becoming particularly urgent to determine whether and if so to what extent such OWF expansion affects our oceans and local climates. OWFs produce a downstream wind speed reduction, the so-called wind-wake effect, which impacts atmospheric boundary layers, alters local wind characteristics and in turn affects ocean dynamics. This book will help readers to understand in detail these OWF-induced changes in the atmosphere and ocean by analyzing model simulations and measurements. In this context, OWF-induced upwelling and downwelling are key aspects.

Reeds Nautical Almanac 2019 Springer Science & Business Media First published in 1971, these Guides provide invaluable information of thousands of maritime ports across the globe. They are compiled and published annually by LR One Ocean, whose years of global maritime experience allows them to provide expert and innovative solutions to the sector's problems.

The Guides cover a significant geographical breadth, and the most recent volume includes information on over 12,500 ports, harbours and terminals worldwide. These are fully indexed and contain detailed port plans and mooring diagrams.

Lloyd's Register OneOcean's Guide to Port Entry 1987-1988 :

Nations A - L Bloomsbury Publishing

For old and new studies in decision making and risk analysis, this book should stand at the watershed. Studies of conflict resolution

and public policy will surely now have to take account of the model investigation provided by the IASA team, and many things will not be the same again. This is a report of inquiries into the siting of liquefied energy gas (LEG) facilities in the Federal Republic of Germany, the Netherlands, the United Kingdom, and the United States. The risks of transporting this highly combustible stuff, and the economic benefits of being able to bring a natural energy source from one side of the globe to the other, holding it, and piping it out as needed, make LEG a model case for studying the public response to dangerous technology. The dangers of LEG are different from those of nuclear power, for instance, where the response too often becomes entangled with the fear of nuclear war. The dangers of LEG include uncontrollable explosions, rather than insidious contamination. But the degree of dangerousness is very much of the same order as that of nuclear power, and is at least as difficult to assess. In four different countries the constitutional procedures involved in obtaining approval of nuclear or LEG facilities are on record. The four case histories here are a model for comparative study of conflict resolution. The period over which the negotiations developed is much the same.
