In 2001, the European Commission published its so-called Ports Package, a first attempt at developing a European policy for seaports. The Ports Package includes a Directive on Market Access to Port Services, which will influence the port industry thoroughly and lead to fundamental changes in daily port operations. In this volume, academics as well as practising lawyers from France, Ireland, Italy and Belgium describe the legal framework for the several branches of the port sector, recalling the far-reaching practical implications of existing general EU law and discussing the latest versions of the Port Services Directive proposal. Completed by authoritative views from the head of the Commission's ports unit, a specialist MEP, and representatives from both the public and the private port sector, this book offers a fairly complete overview of existing port law as well as the main points of concern in the policy debate. Its purpose is to serve both as a policy background document and as a working tool for public and private port players, as well as for academics and lawyers.

Aviation Policy Framework World Health Organization

1998 had seen further efforts by the European Commission to reduce the number of natural monopolies in the air transport market. The Council of the EU discussed a Directive aimed at regulating airport practices by limiting the level of charges, putting an end to unfair practices and improving transparency for users. At the same time, the Commission set conditions on airline alliances after having carried out investigations into several alliances between EU and US carriers. Another significant issue in 1998 has been the review of conditions of carriage and tickets in consultation with the Commission and with consumer organisations, as well as the proposal for a revision of Regulation No. 895/91 regarding denied boarding compensation. Also in high profile during 1998 has been the proposal for a multilateral treaty between the EU and Eastern European countries regarding the adoption of the air law regime of the EU and EU competition law, which would create a common European aviation area. These various developments have provided the principal topics for discussion at the Association's annual conference for 1998.

Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. This second edition of Moving Boxes by Air offers a comprehensive and up-to-date guide to the business and practices of air cargo, with chapters dedicated to key issues such as current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts. The book illustrates the recent emphasis on mergers at the expense of alliances, which have not had the impact that they had on passenger operations. The section on security has been expanded to assess in more depth the threats to aircraft from terrorists, particularly in the lower cargo and passenger baggage compartments. Surcharges are examined and the book considers whether all airlines will follow the lead of some to do away with both fuel and security surcharges. The book concludes with a summary of the latest industry forecasts. Fully updated throughout, this edition is the definitive guide to air cargo for professionals within both the aviation and freight industries.

Manual on the Regulation of International Air Transport The Stationery Office

Written by a combination of top academics, industry experts and leading practitioners, this book offers a detailed insight into both unimodal and multimodal carriage of goods. It provides a comprehensive and thoroughly practical guide to the issues that matter today on what is a very complex area of law. The topics under discussion range through issues such as paperwork, piracy, liability for defective containers, damage in transit, the CMR Convention, and the possible effects of the Rotterdam Rules. An indispensable resource for transport lawyers, industry professionals, academics and post-graduate students of maritime law.

Emergency response guidance for aircraft incidents involving dangerous goods Routledge

Written by a range of international industry practitioners, this book offers a comprehensive overview of the essence and nature of airline operations in terms of an operational and regulatory framework, the myriad of planning activities leading up to the current day, and the nature of intense activity that typifies both normal and disrupted airline operations. The first part outlines the importance of the regulatory framework underpinning airline operations, exploring how airlines structure themselves in terms of network and business model. The second part draws attention to the operational environment, explaining the framework of the air traffic system and processes instigated by operational departments within airlines. The third part presents a comprehensive breakdown of the activities that occur on the actual operating day. The fourth part provides an eye-opener into events that typically go wrong on the operating day and then the means by which airlines try to mitigate these problems. Finally, a glimpse is provided of future systems, processes, and technologies likely to be significant in airline operations. Airline Operations: A Practical Guide offers valuable knowledge to industry and academia alike by providing readers with a well-informed and interesting dialogue on critical functions that occur every day within airlines.

Behind and Beyond the Chicago Convention CRC Press

Behind and Beyond the Chicago Convention The Evolution of Aerial Sovereignty Edited by Pablo Mendes de Leon & Niall Buissing The Convention on International Civil Aviation which was concluded in Chicago on 7 December 1944, commonly referred to as the Chicago Convention, is one of the most ratified multilateral agreements currently in force, with 193 States parties. In this deeply informative book celebrating its 75th birthday, thirty-three of the most distinguished authors in aviation law offer perspectives on the quality of the Convention's achievements, which principally address the promotion of safety and security. Emphasising the Convention's flexibility in the accommodation of social and technological changes, the authors investigate such topics and issues as the following: environmental protection measures such as abatement of noise and reduction of the damaging effects of gaseous emissions; effect of new methods of communication such as Global Navigation Satellite Systems (GNSS); distinction between civil and State aircraft; economic regulation as established under air services agreements between States; cybersecurity measures; compensation for damages; liberalisation of air services; role of regional aviation organisations, in particular, that of the European Union; position of airlines, airports, and providers of air navigation services; and territorial jurisdiction with respect to areas lacking a universally accepted sovereign status. Annexes include the original texts of the Paris Convention 1919 and the Chicago Convention

1944. With its incisive perceptions put forward by distinguished aviation lawyers – including an exploration of the absolute character of sovereignty – this book is without peer in its analysis of how the Chicago Convention affects the regulation of international civil aviation and the operation of air services. Its multifaceted approach towards the current state of affairs from a legal and policy perspective will be welcomed by practitioners and law firms in the field and civil aviation authorities, as well as by academics and business persons with a stake in aviation.

Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. For some network combination carriers it accounts for up to half of total tonne-kms flown, and as much as one quarter of total revenue. In addition, the integrated carriers such as DHL, FedEx and TNT have their own fleets of dedicated freighter aircraft, and cargo aircraft operators like Cargolux and Nippon Cargo have a specialist role in the industry. Featuring expert analysis and worked examples to enhance understanding, *Moving Boxes by Air* by Peter Morrell offers a comprehensive and up-to-date guide to the business and practices of air cargo, with a chapter dedicated to each key issue, such as: current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts.

In July 2012, the Government consulted on its strategy for aviation, the draft Aviation Policy Framework. This final Aviation Policy Framework will fully replace the 2003 Air Transport White Paper (Cm.6046, ISBN 9780101604628) on aviation, alongside Government decisions following the recommendations of the Independent Airports Commission, established September 2012. The Aviation Policy Framework is underpinned by two core principles: (i) Collaboration: achieved by working together with industry, regulators, experts, local communities to identify workable solutions; (ii) Transparency: decision making based on clear, independent information and processes. The Framework Policy covers the following areas: (1) Supporting growth and benefits of aviation; (2) Managing aviation's environmental impacts, such as climate change and noise pollution; (3) The role of the Airports Commission; (4) Other aviation objectives, including: protecting passenger' rights; competition and regulation policy; airspace; safety; security and planning.
