### PAOLA MATHEWS

#### **The Institutional and Organizational Structure of Public Road Transport in Kenya**

Routledge

Evidence has come to light regarding the impact of benzene emissions from road transport, the incidence of asthmatic attacks and the possible toll of particulate matter from diesel engines on human health. This book examines the issues and argues that, without a fundamental change in policy, it is inevitable that the transport sector will continue to impose increasing costs on the natural environment, human health and the economy. It also quantifies the external costs of road transport and suggests new measures, such as road pricing and financial incentives, to pave the way to a sustainable transport system.

#### The International Road Transport Trade of Poland OECD

This study considers the feasibility of options for a new system of charging for road use in the UK, in order to make better use of road capacity and to help reduce traffic congestion. This would mean moving away from the current motoring taxation system and introducing a variable charging system depending on the level of road congestion. Issues discussed include: public attitudes, travel trends, options for national road pricing, institutional aspects of implementation, possible interim options to a national scheme, including the UK lorry road user charging scheme and local congestion charging pathfinder schemes. Amongst the report's conclusions, it finds that national road pricing is becoming feasible in the medium-term (in 10 to 15 years) and could meet the Government's objectives.

However, its successful implementation requires the promotion of a greater degree of public acceptance. Although a national scheme is still some years off, a number of practical steps can be

taken now in preparation, including promoting a public debate to inform and raise awareness, with research into road users' behaviour and implications for business; working with car manufacturers in the development of vehicle technology standards; and working with local authorities on introducing local charging schemes to tackle congestion problems. This document is published alongside the Transport White Paper "The future of transport: a network for 2030" (Cm. 6234, ISBN 0101623429).
