Comprehensive Accountancy XI The Sleeter Group

Both banks and insurance companies are financial intermediaries. However, their functions are different. An insurance company ensures its customers against certain risks, such as the risk of having a car accident or the risk that a house catches on fire. In return for this insurance, their customers pay them regular insurance premiums. Banks accept short-term deposits and make long-term loans. This means that there is a mismatch between their liabilities and their assets. In case a large number of their depositors want their money back, for example in a bank run scenario, they might have to come up with the money in a hurry. For an insurance company, however, its liabilities are based on certain insured events happening. Their customers can get a pay-out if the event they are insured against, such as their house burning down, does happen. They don't have a claim on the insurance company otherwise. Financial Times Guide to Business Start Up, The, 2019-2020 John Wiley & Sons

The enormous growth in trade and commerce as a result of industrial revolution and subsequent liberalisation of trade has placed tremendous pressures on accounting and auditing professionals. Reliable information that facilitates business decisions is affected by rapid growth of information technology and businesses need sufficient reliable information which can be obtained through some verification performed by independent persons. Auditing has permanently evolved, answering such questions. Governments of many nations mandated companies to make provisions for accounts of companies to be checked and reported by people other than the managers of the company. Given the non-transparent governance practices in boards and management of big corporations, it becomes imperative to adopt strict auditing and corporate governance practices. This book is an attempt to introduce to learners the concept of auditing and its relevance in current times. The growing importance of auditing can be gauged from the formulation of auditing standards; this aspect of standards of auditing and procedure for issue of standards of auditing by AASB has been discussed extensively in this book. The book also renders to its readers an understanding of auditor's duties and liabilities, explained diagrammatically alongside imparting knowledge on commencement of auditing and auditing process. It also describes in detail the mechanisms of internal control, internal check and internal audit, highlighting the differences between these three concepts. The process of vouching, which is the foundation of audit process, is well documented for vouching of trading and cash transactions. As information technology has become pervasive in every field, auditing is no exception and therefore the author attempted to describe auditing in an EDP environment. Readers of the book would find it interesting to read about verification and valuation of assets and comprehend the role of audit committees and audit reports. The book would serve as an essential reading for all students of Commerce and those pursuing professional courses of accounting and auditing. It also comes handy for students pursuing B.Com. from Universities in the State of Telangana as the book is planned and written in accordance with the revised CBCS syllabus.
