Industrial production in high-wage countries like Germany is still at risk. Yet, there are many counter-examples in which producing companies dominate their competitors by not only compensating for their specific disadvantages in terms of factor costs (e.g. wages, energy, duties and taxes) but rather by minimising waste using synchronising integrativity as well as by obtaining superior adaptivity on alternating conditions. In order to respond to the issue of economic sustainability of industrial production in high-wage countries, the leading production engineering and material research scientists of RWTH Aachen University together with renowned companies have established the Cluster of Excellence "Integrative Production Technology for High-Wage Countries". This compendium comprises the cluster's scientific results as well as a selection of business and technology cases, in which these results have been successfully implemented into industrial practice in close cooperation with more than 30 companies of the industrial production sector.

The Art of BMW: 90 Years of Motorcycle Excellence presents stunning studio portraiture of the rolling sculpture that BMW has been creating for the past 90 years. Each bike portrait is accompanied by a concise, authoritative profile of the machine. All the classic bikes are here—pre-World War II BMWs like the R5 that defined performance in that era; the military R12 that carried the Wehrmacht as it blitzkrieged its way across Europe; the R75M that accompanied Rommel's Panzers in North Africa; the Earles-forked R69S that offered the perfect platform for mounting a Steib sidecar; the R90S café racer; the K1 "flying brick"; and the GS (Gelände Sport) series that launched a dual-sport revolution. All the bike families are covered—the side-valve machines from the early years, the early overhead-valve performance bikes, the postwar Airheads and Oilheads, the four-cylinder and six-cylinder touring bikes, the early pushrod singles, the modern overhead-cam singles, the latest parallel twins, and inline-four cylinder sport bikes. From the first model, the R32 that launched BMW's motorcycle dynasty, to the latest (and fastest) model, the World Super Bike dominating S1000RR, this book captures nearly a century of motorcycling excellence.

No motorcycle manufacturer is more closely associated with one type of engine than BMW: the air-cooled boxer twin or 'airhead'. It was included in BMW's very first motorcycle in 1923 and virtually every machine the company made, of every type, from radical road bike to TT winner, to land speed record holder, to 1970s style icon and even to the creation of an all-new adventure bike class with the R 80 G/S, right up to the mid-1990s. Phil West celebrates the success of the BMW airhead twin motorcycles. This book, with over 290 photographs, includes a history of the company pre- and post-War; the personalities behind the development of the bikes; profiles of each of the 'R' bikes in turn, including detailed specification guides and production numbers. These wonderful machines are regularly celebrated and now BMW itself is harking back to them with an all-new series of machines.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the

marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

Here is the intriguing story of one of the world's most admired and enduring motorcycle companies, and how their fortunes were molded by a determination to win races. Early in the last century, the fledgling company decided to test its products, demonstrate the quality of its designs, and showcase German technology by winning competitions. That determination has lasted to this day, as BMW has remained a formidable competitor in various venues of motorcycle racing. The book covers the company's early mutation from aircraft engine builder to producer of reliable, high-quality motorcycles. Its development of supercharged engines, advanced suspension systems, and many other innovations led to its dominance of various race competitions at different times, with many of those technologies making their way into production motorcycles. BMWs have long been known for reliability and endurance; it is precisely those characteristics which gave the company the deciding advantage in sidecar racing, endurance competitions, and Superbike racing.

Matchless was one of the true pioneer motorcycle manufacturers. Their first machine was manufactured in London in 1899, and the company really came to prominence in 1907 with victory in the single-cylinder class of the first Isle of Man TT. Over the next seventy years, Matchless produced many distinguished bikes, from singles to magnificent four-cylinder machines. In 1931 Matchless acquired the ailing AJS concern, and the two companies were merged to form AMC - Associated Motorcycles. From then on Matchless and AJS machines became increasingly similar, and for a long time the machines of each mark were practically identical. Mick Walker's history of this famous marque takes in every machine and also looks at the competition fortunes of the company. Well illustrated with archive photographs, this book is a worthy tribute to this famous London manufacturer.

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.

- This book makes palpable the spirit of bike customizing: Soul Fuel delivers fuel for the souls of fans and connoisseurs and inspires all those interested; it provides a fascinating entry to the subject of motorcycling - intimate portraits of those who are the 'man' in 'craftsmanship': they do not simply make rebuilds -- they create legends Presenting 17 international customizers and their interpretations of the BMW R nineT, Soul Fuel reveals a new approach to customizing. A custom bike is, above all: unique. The subculture of the custom bike community and its trends are of major importance, not only for the motorcycle's hardware, but also for the software associated with the lifestyle. Customizers deliberately reject a digitized and perfected world with something handmade and raw -- a kick start for the imagination of all free spirits. With the market launch of the BMW R

nineT in 2013, the unique Soul Fuel project started in earnest. Over the course of the nascent cooperation, the first selected customizers received an R nineT, which they were able to remodel and modify pursuant to their own vision. To date, 17 customizers have created fascinating customizations of the R nineT through Soul Fuel. Five additional projects are to follow in 2018. Introducing the bikes completed to date, the book Soul Fuel is an homage to the "customizing attitude" towards life. When we take a look into the workshops of the most innovative customizers, we can virtually smell and hear the welding equipment. We experience the creative process that emerges from custom bikes made on the basis of the R nineT, up close and personal -- like when musicians cover their favorite song, and in doing so, place their own distinctive stamp upon it. With full passion and dedication, Blitz Motorcycles, 46 Works, El Solitario, and others create exceptional interpretations of an exceptional machine. As unique and customized as the machines it presents, Soul Fuel boasts incredible graphics, layout, and fascinating portraits of the customizers in one innovative, impressively- designed book. Text in English and German.
