Lyrical words and lush, naturalistic paintings introduce children to the tropical rain forest and the animals that live within its wet, green world. From swinging monkeys and upside-down-hanging sloths to graceful caimans and stalking jaguars, Here Is the Tropical Rain Forest envelops young readers in a stunning jungle while teaching them an important lesson about the ecosystem. Madeleine Dunphy's rhythmical, cumulative text shows how each plant and animal of the rain forest is inextricably linked with the others in a chain of life. Michael Rothman's deeply hued and shadowed paintings brilliantly evoke this singular environment.

Discover the plants and animals of the rainforest, and how we can protect them, in this beautifully illustrated children's ebook. Embark on a journey through the enchanting world of the rainforest in Charlotte Milner's beautifully illustrated *The Rainforest Book*. Sweep aside the liana vines, hop over the giant roots of the kapok tree, and follow the sound of the howler monkey as you venture into the tropical rainforest. Find out about some of the amazing animals that live there, learn about the enormous variety of life-giving plants, and discover why the Amazon rainforest is known as the 'lungs' of our Earth. In this beautiful ebook, Charlotte Milner continues to highlight the important ecological issues faced by our planet, following on from *The Bee Book*,

The Sea Book, and The Bat Book. Did you know that over half of our planet's wildlife live in the rainforest? And that at least two meters of rain falls in the rainforest every year? The world's rainforests are packed with amazing animals and plants, from the deadly poison dart frog, to the stinky rafflesia flower--there is plenty to discover! As our planet's climate crisis becomes even more critical, with forest fires raging in the Amazon, The Rainforest Book is the perfect way to introduce little nature-lovers to this enchanting yet threatened world. This celebration of the rainforest shows children just how important it is, and reminds them that it is up to us to care for our planet and its wildlife.

This book provides current knowledge about tropical rain forest genetics and its implications for the profitable and sustainable management of forest resources in Southeast Asia. Each chapter covers a major topic in the evolutionary biology of tropical rain forest trees and how management systems interact with these natural dynamics. Authors provide an up-to-date and insightful review of important scientific findings and conclude with practical recommendations for the modern forester in Southeast Asia. Several chapters provide compelling discussions about commonly neglected aspects of tropical forestry, including the impact of historical dynamics of climate change, anthropogenic threats to genetic viability, and the important role of wildlife in maintaining genetic diversity. These discussions will promote a deeper appreciation of not only the economic value of forests, but also their mystery and intangible values. The silvicultural industry in Southeast Asia is a major contributor to the regional economy but the connection between scientific research and the application and development of policy could be improved upon. This book will help bridge that gap. This book will prove beneficial reading for forestry students, professional forest managers, and policy makers, who do not have technical training in genetics. It is also intended for non-specialists who are involved in

the tropical timber industry, from the local forest manager to the international timber purchasing agent.

Animals of the Tropical Rain Forest
Silver Dolphin Books

The first edition of *Tropical Rain Forests: an Ecological and Biogeographical Comparison* exploded the myth of 'the rain forest' as a single, uniform entity. In reality, the major tropical rain forest regions, in tropical America, Africa, Southeast Asia, Madagascar, and New Guinea, have as many differences as similarities, as a result of their isolation from each other during the evolution of their floras and faunas. This new edition

reinforces this message with new examples from recent and on-going research. After an introduction to the environments and geological histories of the major rain forest regions, subsequent chapters focus on plants, primates, carnivores and plant-eaters, birds, fruit bats and gliding animals, and insects, with an emphasis on the ecological and biogeographical differences between regions. This is followed by a new chapter on the unique tropical rain forests of oceanic islands. The final chapter, which has been completely rewritten, deals with the impacts of people on tropical rain forests and discusses possible conservation strategies that take into account the differences highlighted in the previous chapters. This exciting and very readable book, illustrated throughout with color photographs, will be invaluable reading for undergraduate students in a wide range of courses as well as an authoritative reference for graduate and professional ecologists, conservationists, and interested amateurs.
