*Culinary Art and Anthropology* is an anthropological study of food. It focuses on taste and flavor using an original interpretation of Alfred Gell's theory of the "art nexus." Grounded in ethnography, it explores the notion of cooking as an embodied skill and artistic practice. The integral role and concept of "flavor" in everyday life is examined among cottage industry barbacoa makers in Milpa Alta, an outer district of Mexico City. Women's work and local festive occasions are examined against a background of material

on professional chefs who reproduce "traditional" Mexican cooking in restaurant settings. Including recipes to allow readers to practice the art of Mexican cooking, *Culinary Art and Anthropology* offers a sensual, theoretically sophisticated model for understanding food anthropologically. It will appeal to social scientists, food lovers, and those interested in the growing fields of food studies and the anthropology of the senses.

This encyclopedic reference work on pharmacognosy covers the study of those natural substances, principally plants, that find a use in medicine. Its popularity and longevity stem from the book's balance between classical (crude and powdered drugs' characterization and examination) and modern (phytochemistry and pharmacology) aspects of this branch of science, as well as the editor's recognition in recent years of the growing importance of complementary medicines, including herbal, homeopathic and aromatherapy. No other book provides such a wealth of detail. A reservoir of knowledge in a field where there is a resurgence of interest - plants as a source of drugs are of growing interest both in complementary medicine fields and in the pharmaceutical industry in their search for new 'lead compounds'. Dr Evans has been associated with the book for over 20 years and is a recognised authority in all parts of the world where pharmacognosy is studied, his knowledge and grasp of the subject matter is unique. Meticulously referenced and kept up to date by the editor, new contributors brought in to cover new areas. New chapter on 'Neuroceuticals'. Addition of many new compounds recently added to British Pharmacopoeia as a result of

European harmonisation. Considers development in legal control and standardisation of plant materials previously regarded as 'herbal medicines'. More on the study of safety and efficacy of Chinese and Asian drugs. Quality control issues updated in line with latest guidelines (BP 2007).

*Drugs of Natural Origin* is a unique multidisciplinary book suitable for undergraduate and graduate students and teachers in the area of natural product science, but also as a complementary book for disciplines like medicinal chemistry, biochemistry and pharmacology. The book can also serve society as a scientific source for the understanding of a sustainable use of natural products in the development of new drugs, scientifically based herbal remedies, and environmentally friendly biomolecules. During evolution, molecules have been developed for specific functions in nature. These bioactive substances have a potential as new drug candidates in drug development, but also as pharmacological tools, intermediates or templates for synthesis of drugs. This book deals with terrestrial and marine bioactive substances of plant, microbial or animal origin. The occurrence, biosynthesis, isolation, chemistry and medical use are described together with basic research strategies. An increased understanding of the medical importance of bioactive natural products has developed in society. Since the publication of the sixth edition, six years ago, considerable progress has been achieved in the study of biosynthetic pathways, mainly based on gene technology. The revolution in high-throughput sequencing technology has given an increasing access to microbial genome sequences, which opens up new possibilities in the discovery of novel bioactive natural products. This development is reflected in a substantial revision and expansion of the book, but also removal of some sections containing products remotely associated with drugs. The new book also contains description of novel drugs marketed since the publication of the previous edition, especially in the field of diabetes, cancer and infection.

This book series gives a comprehensive overview of the adverse

effects of botanical medicines. It provides introductory information on Botany, Chemistry, Pharmacology and Uses, followed by an Adverse Reaction Profile subdivided according to organ and function. The third contribution to the series gives important information about eighteen specific medicinal herbs and important plant constituents. The herbs and constituents have been selected for several reasons, such as a prominent place in phytotherapy, clinical expectations about therapeutic potential and recent concern about a serious adverse reaction. The World Health Organization Regional Office for Europe (Copenhagen) has supported the book in the form of an acknowledgement that has been prepared by this Office.

Phytochemicals from medicinal plants are receiving ever greater attention in the scientific literature, in medicine, and in the world economy in general. For example, the global value of plant-derived pharmaceuticals will reach \$500 billion in the year 2000 in the OECD countries. In the developing countries, over-the-counter remedies and "ethical phytomedicines," which are standardized toxicologically and clinically defined crude drugs, are seen as a promising low cost alternatives in primary health

care. The field also has benefited greatly in recent years from the interaction of the study of traditional ethnobotanical knowledge and the application of modern phytochemical analysis and biological activity studies to medicinal plants. The papers on this topic assembled in the present volume were presented at the annual meeting of the Phytochemical Society of North America, held in Mexico City, August 15-19, 1994. This meeting location was chosen at the time of entry of Mexico into the North American Free Trade Agreement as another way to celebrate the closer ties between Mexico, the United States, and Canada. The meeting site was the historic Calinda Geneve Hotel in Mexico City, a most appropriate site to host a group of phytochemists, since it was the address of Russel Marker. Marker lived at the hotel, and his famous papers on steroidal saponins from *Dioscorea composita*, which launched the birth control pill, bear the address of the hotel.
