*Application of Nursing Process* Lippincott Williams & Wilkins

"One of the strengths of Marriott's Practical Electrocardiography through its more than 50-year history has been its lucid foundation for understanding the basis for ECG interpretation. Again, in this revision, we have attempted to retain the best of the Marriott tradition--emphasis on the concepts required for everyday ECG interpretation and the simplicities, rather than complexities, of the ECG recordings. During preparation of the 9th and 10th editions, Tobin Lim coauthored many of the 11th edition chapters and served as the primary developer of the digital content associated with that edition. Tobin Lim's input continues into this 12th edition, and David Strauss has led even further into the electronic-based interactive learning experiences. More than 30 of

the figures that evolved through previous editions have now been converted through the creative expertise of Mark Flanders into animated movies accessed via QR codes imbedded in the book. David has also collaborated with electrocardiographic educators who are especially skilled in e-based education to add interactive video content to many of the 12th edition chapters. Each of the now 24 chapters is divided (as indicated in the table of contents) into discrete, compact "learning units." Each learning unit begins on a new page to provide blank space for the reader's notes. The purpose of the learning units is to make this book easier to use by allowing the reader to be selective regarding the material to be considered at a particular time. Because the modern student of electrocardiography is primarily oriented to a visual perspective, we have typically begun each page with an illustration"-- Provided by publisher.

**Concise Dermatology** BRILL

This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition.

Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of

malnutrition in the elderly.

Syncope Taylor & Francis
