#1 NEW YORK TIMES BESTSELLER • ONE OF TIME MAGAZINE'S 100 BEST MYSTERY AND THRILLER BOOKS OF ALL TIME • Before Doctor Sleep, there was The Shining, a classic of modern American horror from the undisputed master, Stephen King. Jack Torrance's new job at the Overlook Hotel is the perfect chance for a fresh start. As the off-season caretaker at the atmospheric old hotel, he'll have plenty of time to spend reconnecting with his family and working on his writing. But as the harsh winter weather sets in, the idyllic location feels ever more remote . . . and more sinister. And the only one to notice the strange and terrible forces gathering around the Overlook is Danny Torrance, a uniquely gifted five-year-old.

In book the role of Ca<sup>2+</sup> and other signaling pathways of Vascular smooth muscle (VSM) contraction will be discussed. VSM contraction plays an important role in the regulation of vascular resistance and blood pressure, and its dysregulation may lead to vascular diseases such as hypertension and coronary artery disease. Under physiological conditions, agonist activation of VSM results in an initial

phasic contraction followed by a tonic contraction. The initial agonist-induced contraction is generally believed to be due to Ca<sup>2+</sup> release from the intracellular stores. Although VSM is unique in that it can sustain contraction with minimal energy expense, the mechanisms involved in the maintained VSM contraction are not clearly understood.
