COLBY BALL

Conclusive Land Titling System CRC Press

This is the tenth volume in a major series which studies the status of land reforms throughout the country. It examines the progress achieved and the difficulties encountered in the computerisation of land records in various states. In 1988, the central government sponsored the Computerisation of Land Records (CoLR) scheme to tackle the recurring problems thrown up by inadequate land records system. Providing a critical appraisal of CoLR, the 20 articles in the volume are divided into three sections: Computerisation of Land Records; Digitisation of Cadastral Maps; and Land Information System. Based on empirical data and field

studies, this volume is an important contribution towards understanding the socio-economic realities and social dynamics of contemporary India in the framework of land reforms.

Sustainable Management of Land Resources SAGE

The depletion of land resources is one of the greatest challenges for mankind in this millennium. Shrinking land resources, weather aberrations, deterioration of land quality, and the globalization and liberalization of market economies have become intertwined to influence the sustainable management of land resources and land use plans. This important volume, *Sustainable Management of Land Resources: An Indian Perspective*, addresses these challenges. This comprehensive volume, covering important research, much of it gathered with the use of new technology, tools, and applications, is organized into four sections: (add

bullets) land resource inventory and characterization geospatial technologies in land resource mapping and management soil nutrient status and management land use planning and livelihood security The volume looks at how scientists translate their knowledge and experience in sustainable land resources and management into implementable policy decisions, with a particular focus on India. Since India is an agrarian economy, the land resources assume a very critical role affecting the livelihood of a vast majority of populace in the country. The information gathered—and the methods by which it is gathered—is applicable globally. This comprehensive publication will be highly useful for the researchers, academicians, extension workers, policymakers, planners, officials of land resources survey, planning and management institutions/agencies/departments, and others.
