This comprehensive textbook brings together a unique vision and multidisciplinary approach – embracing and combining MD, DO and DPM foot and ankle training disciplines – into a singular focus on improving and mastering surgical treatment of foot and ankle disorders. It opens with a chapter presenting the specific preoperative considerations and protocols commonly followed by foot and ankle surgeons of all specialties. Divided into three main thematic sections detailing the forefoot, midfoot and hindfoot, each subsequent chapter follows a consistent chapter format presenting case examples, key surgical set-up and equipment

needs and step-by-step clinical pearls for surgical excellence. Post-operative care and rehabilitation recommendations are also included for a well-rounded presentation of care from start to finish. Both common and complex pathologies and injuries are discussed, from bunion and hammertoe management to the Charcot foot and ankle, total ankle replacement, arthroscopy and arthroplasty techniques, amputations and biologics. Generous figures and intraoperative photos illustrate the procedures in vivid detail. The subspecialty of foot and ankle surgery is a highly specialized one, which is constantly evolving and improving. This speaks to the complexity of the foot and ankle complex, the multiple levels and articulations of the foot and the variety of pathologies encountered.
