Galileo's Dialogue Concerning the Two Chief World Systems, published in Florence in 1632, was the most proximate cause of his being brought to trial before the Inquisition. Using the

dialogue form, a genre common in classical philosophical works, Galileo masterfully demonstrates the truth of the Copernican system over the Ptolemaic one, proving, for the first time, that the earth revolves around the sun. Its influence is incalculable. The Dialogue is not only one of the most important scientific treatises ever written, but a work of supreme clarity and accessibility, remaining as readable now as when it was first published. This edition uses the definitive text established by the University of California Press, in Stillman Drake's translation, and includes a Foreword by Albert Einstein and a new Introduction by J. L. Heilbron.

Finding a Unique Pathway to Happiness and Success National Academies Press

This book begins with a lesson on the nature of astronomy, and then it covers the major structures of our solar system. Starting with the sun and working towards Pluto, the student will learn details about all nine planets (or is it eight? - your student will have to decide) in the solar system. Along the way, the student will also learn about Earth's moon, the asteroid belt, and the Kuiper belt. After that, the student will move outside our solar system and learn about the stars and galaxies that make up God's incredible universe. Finally, the student will learn about space travel and what it takes to be an astronaut! The activities and projects use easy-to-find household items and truly make the lessons come alive! They include making a solar eclipse, simulating the use of radar to determine a hidden landscape, and making a telescope. We recommend that you spend the entire school year covering this book, devoting approximately two sessions per week to the course.

Based on the renowned Renzulli Method, which has been adopted in schools all over the country, Light Up Your Child's Mind presents a practical program to help children fire up a love of learning to last a lifetime. World-renowned experts Drs. Renzulli and Reis illustrate the crucial role parents can play in their children's development and address how they can work with teachers to enhance their children's education. They uncover the hidden potential of daydreamers, rebels, and one-track minds, arguing that gifted behavior -- basic smarts, high levels of task commitment, and creativity -- can be fostered in bright children,

even unmotivated ones. Step by step, *Light Up Your Child's Mind* will show parents how to set their kids on the path to a rewarding future.

*Astronomy* is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope *Astronomy* was written, updated, and reviewed by a broad range of astronomers and astronomy educators in a strong community effort. It is designed to meet

scope and sequence requirements of introductory astronomy courses nationwide.
