Although there are a number of books on the market dealing with the various aspects of arson investigation, this is the only book that combines both arson investigation and the law relating to all aspects of arson from investigation through prosecution. Chapter One examines what fire investigators, prosecutors, and defense attorneys must know about the investigation of fires: who should be involved in an investigation, the substantive knowledge they require about fire science, the procedures they must follow in conducting an investigation and their role as expert witnesses in arson prosecutions. Since the collection of evidence from the fire scene is a critical part of fire investigation, Chapter Two examines the law of search and seizure mandated by the Fourth Amendment. Chapter Three takes the investigation forward to the police interrogation of witnesses and suspects, examining the principal judicial decisions that govern this form of police action. Chapter Four examines the use of grand juries in arson cases and potential defense claims based on the privilege against self-incrimination. Chapter Five focuses on sharing statutes as a means of obtaining information about suspected arson. Chapter Six summarizes the statutes in the fifty states and the District of Columbia dealing with arson as well as the principal federal statutes governing arson. Chapter Seven deals with the law governing accessories and inchoate liability in the context of arson as well as the defense that are frequently raised in arson prosecutions. Finally, Chapter Eight is an edited transcript of the prosecutor's portion of an actual arson case that demonstrates the interplay between an arson investigation procedures in evidence gathering, and substantive arson-related criminal law. Arson Law and Prosecution will be very useful to everyone involved in arson cases, including police and fire investigators, prosecutors, defense attorneys, and judges. It is also ideal for use in arson investigation training courses in colleges, in advanced criminal law courses in law schools that focus in depth on one crime, and in a law school course dealing with the preparation and presentation of a criminal case.

For fire departments, law enforcement agencies, community groups, and federal and state agencies, this program model offers approaches for the prevention and control of arson. Efforts to improve planning and implementation of arson control programs have been constrained by several factors: the traditionally low priority given to arson by the community, law enforcement agencies, and fire control agencies; the complex nature of crime, which is motivated variously by psychological and economic gain; and a lack of knowledge of the crime's magnitude. This NIJ program model is based on survey results from 170 cities with a population of 50,000 or more and data on 6 cities selected for further onsite observation--New York City, Dallas, Philadelphia, Seattle, Denver, and New Haven. Informal discussions were also held with planners and developers involved in the organization of arson response campaigns. The result of these inquiries is a report which identifies and discusses alternative strategies for improving six critical areas in arson prevention. The arson task force coordinates efforts for law agencies, as the first step in the planning process. The arson unit is the operational group responsible for day-to-day arson prevention and control activities. Here, discussion focuses upon the traditional conflict between police and fire agencies and the need for joint action as well as prosecutorial involvement in investigative operations. Investigative processes are covered, with attention to the issues of deciding which fires to investigate for arson, the allocation of staff resources to investigative tasks, and the need for supportive technological resources. Information on prevention strategies covers patrols, media campaigns, and the enforcement of existing codes. Discussion of current laws on insurance, criminal penalties, and jurisdictional authorities includes a list of new laws that provide immunity for the exchange of information between arson investigators and insurance companies. Finally, a data system is presented that can diagnose a community's arson problem and make resource allocation decisions. All aspects of the model are referenced, illustrated with diagrams and tables, and supplemented with appendixes containing a model arson penal law and a reporting immunity bill. A summary of arson prevention and control programs in the cities selected for site visits is provided.
