This distinguished reference work is much more than a lexicon or ordinary dictionary. Each essay, complete with bibliographical references, presents a selective and critical discussion of some issue fundamental to sociology. Synthesizing American, British, French, and German, taken together these contributions provide a coherent and sophisticated critique of the sociological tradition.

Whether it is nuclear power, geo-engineering or genetically modified foods, the development of new technologies can be fraught with complex ethical challenges and political controversy which defy simple resolution. In the past two decades there has been a shift towards processes of Participatory Technology Assessment designed to build channels of two-way communication between technical specialists and non-expert

citizens, and to incorporate multiple stakeholder perspectives in the governance of contentious technology programmes. This participatory turn has spurred a need for new tools and techniques to encourage group deliberation and capture public values, moral and choices. This book specifically examines the ethical dimensions of controversial technologies, and discusses how these can be evaluated in a philosophically robust manner when the ones doing the deliberating are not ethicists, legal or technical experts. Grounded in philosophical pragmatism and drawing upon empirical work in partnership with citizen-stakeholders, this book presents a model called "Reflective Ethical Mapping" - a new meta-ethical framework and toolbox of techniques to facilitate citizen engagement with technology ethics.

This book considers the principle of 'sustainable development' which is currently facing a growing environmental crisis. A new mode of thinking and positioning the ecological imperative is the major input of this volume. The prism of co-viability is not the economics of political agencies that carry the ideology of the dominant/conventional economic schools, but rather an opening of innovation perspectives through science. This volume, through its four parts, more than 40 chapters and a hundred authors, gives birth to a paradigm which crystallizes within a concept that will support in overcoming the ecological emergency deadlock.

"In their introduction to this Handbook, the editors affirm: 'Many sociologists have come to realise that it makes no sense now to omit religion from the repertoire of social scientific explanations

of social life'. I wholeheartedly agree. I also suggest that this wide-ranging set of essays should become a starting-point for such enquiries. Each chapter is clear, comprehensive and well-structured - making the Handbook a real asset for all those engaged in the field." - Grace Davie, University of Exeter "Serious social scientists who care about making sense of the world can no longer ignore the fact that religious beliefs and practices are an important part of this world... This Handbook is a valuable resource for specialists and amateurs alike. The editors have done an exceptionally fine job of incorporating topics that illuminate the range and diversity of religion and its continuing significance throughout the world." - Robert Wuthnow, Princeton University At a time when religions are increasingly affecting, and affected by, life beyond the narrowly sacred sphere, religion everywhere seems to be caught up in change and conflict. In the midst of this contention and confusion, the sociology of religion provides a rich source of understanding and explanation. This Handbook presents an unprecedentedly comprehensive assessment of the field, both where it has been and where it is headed. Like its many distinguished contributors, its topics and their coverage are truly global in their reach. The Handbook's 35 chapters are organized into eight sections: basic theories and debates; methods of studying religion; social forms and experiences of religion; issues of power and control in religious organizations; religion and politics; individual religious behaviour in social context; religion, self-identity and the life-course; and case studies of China, Eastern Europe, Israel, Japan, and Mexico. Each chapter establishes benchmarks for the state of sociological thinking about religion in the 21st century and provides a rich

bibliography for pursuing its subject further. Overall, the Handbook stretches the field conceptually, methodologically, comparatively, and historically. An indispensable source of guidance and insight for both students and scholars. Choice 'Outstanding Academic Title' 2009

A Critical Dictionary of Sociology Librairie Droz

How does food restore the fragmented world of migrants and the displaced? What similar processes are involved in challenging, maintaining or reinforcing divisions between groups coexisting in the same living place? *Food Identities at Home and on the Move* examines how 'home' is negotiated around food in the current worldwide context of uncertainty, mobility and displacement. Drawing on empirical approaches to heritage, identity and migration studies, the contributors analyse the relationship between food and the various understandings of home and dwelling. With case studies on sushi around the world, food as heritage in the Afghan diaspora and Mexican foodways in Chicago, these chapters offer novel readings on the convergence of food and migration studies, the anthropology of space and place and the field of mobility by focusing on how entangled stories of food and home are put on display for constructing the present and imagining the future.

An Invitation to Reflexive Sociology SAGE

This book offers a comprehensive overview of the major theoretical perspectives in contemporary sociology, covering schools of thought or intellectual movements within the discipline, as well as the work of individual scholars. The author provides not only a rigorous exposition of each theory, but also an examination of the scholarly reception of the approach in

question, considering both critical responses and defences in order to reach a balanced evaluation. Chapters cover the following theorists and perspectives: † Alexander † Bourdieu † Ethnomethodology † Exchange Theory † Foucault † Giddens † Goffman † Habermas † Luhmann † Merton † Network and Social Capital Theory † Parsons † Rational Choice Theory † Schutz and Phenomenalism † Structuralism † Symbolic Interactionism An accessible and informative treatment of the central approaches in sociology over the course of the last century, this volume marks a significant contribution to sociological theory and constitutes an essential addition to library collections in the areas of the history of sociology and contemporary social theory.

In this introduction to understanding, researching and doing case studies in the social sciences, Hamel outlines several differing traditions of case study research including the Chicago School of Sociology, the anthropological case studies of Malinowski, and the French La Play school tradition. He shows how each developed, changed and has been practiced over time.

Suggestions for the practice of case studies are made for the novice reader and an additional feature is the extensive bibliography on case study methods in social science to allow for further exploration of the topic.

Professor Duverger at last provides the student with an overall view of the methodology of the social sciences. He briefly traces the origin of the notion of a social science, showing how it emerged from social philosophy. Its essential elements and pre-conditions are described; the splintering of social science into specialist disciplines is explained, and the need for a general sociology confirmed. The techniques of observation used by social scientists are dealt with in some detail and the unity of the social sciences is illustrated by examples of the universal application of these techniques. Documentary evidence in its various forms are described along with the basic analytical techniques, including quantitative methods and content analysis. Other methods of gathering information through polls, interviews, attitude scales and participant observation are all described. Professor Duverger brings together the different kinds of analysis used to assess the information thus gathered. Arguing that observing and theorizing are not two different stages or levels of research, he examines the practical value and difficulties of general sociological theories, partial theories and models and working hypotheses. He both describes and assesses the limitations of experiment and the scope of comparative methods in the social sciences. He then gives elementary instructions for using and assessing the value of mathematical techniques. The possibilities of presenting social phenomena through graphs and charts are also explored. There are useful book lists and diagrams.

The Routledge Reader on the Sociology of Music offers the first collection of source readings and new essays on the latest

thinking in the sociology of music. Interest in music sociology has increased dramatically over the past decade, yet there is no anthology of essential and introductory readings. The volume includes a comprehensive survey of the field's history, current state and future research directions. It offers six source readings, thirteen popular contemporary essays, and sixteen fresh, new contributions, along with an extended Introduction by the editors. The Routledge Reader on the Sociology of Music represents a broad reference work that will be a resource for the current generation of sociologically inclined musicologists and musically inclined sociologists, whether researchers, teachers or students. *Sociology in Action (Routledge Revivals)* Cambridge Harvard, U. The Anthropocene refers to all societies' current era of environmental challenges. For the social sciences, the Anthropocene represents a historical "moment" with huge potential: it offers people new ways of considering the human condition, as well as how they interact with the rest of the living world and with the planet on all levels. At the turn of the 21st century, the idea of the Anthropocene burst onto the older, diverse and varied scene of risk studies. This "new geological era", which is entirely created by humanity, went on to revive our understanding of environmental issues, as well as the analysis of the social and political problems that constitute risk situations. Drawing together contributions from specialists in social sciences concerning risks and the environment, *Risks and the Anthropocene* explores the advantages that the idea of the Anthropocene can offer in understanding risks and their management, as well as the limitations it presents.

Introduction to the Social Sciences (RLE Social Theory)

Published in 1997, this volume is a result of a number of European Union and Council of Europe initiatives. The major stimulus came from an intensive course held in Lisbon in 1994 as part of two Erasmus networks exploring the nature of intercultural studies on a European-wide basis. Although the concepts of multiculturalism and interculturalism have frequently been discussed within a British context, this book draws on the interlocking and comparative perspectives of specialists in education and teacher training in several European countries including Spain, France, Italy, Britain and the Netherlands. Educational policies and theories of identity are compared and there are special sections in multilingualism, teacher training, curriculum development, relationships between different ethnic groups and a vision of the future of intercultural education in Europe. The issues discussed in the book are significant in the development of modern societies as they seek to come to terms with the revolution in intercultural relations brought about by mass communications and global transport. The world is rapidly having to come to terms with cultural and social differences which can no longer be kept separate in their protective groups. The Philosophical Review SAGE Publications

Ethics and Technology Assessment: A Participatory Approach
Springer

The Routledge Handbook of the Sociology of Arts and Culture offers a comprehensive overview of sociology of art and culture, focusing especially – though not exclusively – on the visual arts, literature, music, and digital culture. Extending, and critiquing, Bourdieu's influential analysis of cultural capital, the distinguished international contributors explore the extent to which cultural omnivorousness has eclipsed highbrow culture, the role of age, gender and class on cultural practices, the character of aesthetic preferences, the contemporary significance of screen culture, and the restructuring of popular culture. The Handbook critiques modes of sociological determinism in which cultural engagement is seen as the simple product of the educated

middle classes. The contributions explore the critique of Eurocentrism and the global and cosmopolitan dimensions of cultural life. The book focuses particularly on bringing cutting edge 'relational' research methodologies, both qualitative and quantitative, to bear on these debates. This handbook not only describes the field, but also proposes an agenda for its development which will command major international interest.

Bibliographia philosophiæ John Wiley & Sons

This book, first published in 1976, discusses four classical paradigms for sociology – the positivism of Saint-Simon and Comte, Durkheim, Marx and Weber – and four contemporary

developments or revisions of them – the sociologie active of Dumazedier and his colleagues in France, sociology in Socialist Poland, the work of Dahrendorf and the 'new sociology' of Mills and his successors. Christopher Bryant suggests that no neutral language exists in which to compare the characteristics of these different paradigms, yet highlights those features which are common to all of them. Unique in its approach and analysis of the relationship between sociology and action, this book is of value and interest to students of sociology and theory and professional sociologists.
