This book presents the papers from the  
Internal Combustion Engines:  
Performance, fuel economy and emissions  
held in London, UK. This popular  
international conference from the  
Institution of Mechanical Engineers  
provides a forum for IC engine experts  
looking closely at developments for  
personal transport applications, though  
many of the drivers of change apply to  
light and heavy duty, on and off highway,  
transport and other sectors. These are  
exciting times to be working in the IC  
engine field. With the move towards  
downsizing, advances in FIE and  
alternative fuels, new engine architectures  
and the introduction of Euro 6 in 2014,  
there are plenty of challenges. The aim  
remains to reduce both CO2 emissions and  
the dependence on oil-derivate fossil fuels  
whilst meeting the future, more stringent  
constraints on gaseous and particulate  
material emissions as set by EU, North  
American and Japanese regulations. How  
will technology developments enhance  
performance and shape the next  
generation of designs? The book  
introduces compression and internal  
combustion engines' applications, followed  
by chapters on the challenges faced by  
alternative fuels and fuel delivery. The  
remaining chapters explore current  
improvements in combustion, pollution  
prevention strategies and data  
comparisons. presents the latest  
requirements and challenges for personal  
transport applications gives an insight into  
the technical advances and research going  
on in the IC Engines field provides the  
latest developments in compression and  
spark ignition engines for light and heavy-  
duty applications, automotive and other  
markets
