*BMJ Clinical Review - General Surgery* CRC Press

Many patients who present to district (first-referral) level hospitals require surgical treatment for trauma, obstetric, abdominal or orthopedic emergencies. Often surgery cannot be safely postponed to allow their transfer to a secondary or tertiary-level hospital but many district hospitals in developing countries have no specialist surgical teams and are staffed by medical, nursing, and paramedical personnel who perform a wide range of surgical procedures often with inadequate training. The quality of surgical and acute care is often further constrained by poor facilities, inadequate low-technology apparatus and limited supplies of drugs, materials, and other essentials. The mission of the team responsible for Clinical Procedures in the World Health Organization Department of Essential Health Technologies (EHT) is to promote the quality of clinical care through the identification, promotion and standardization of appropriate procedures, equipment and materials, particularly at district hospital level. WHO/BCT has identified education and training as a particular priority, especially for non-specialist practitioners who practice surgery and anesthesia. It has therefore developed Surgical Care at the District Hospital as a practical resource for individual practitioners and for use in undergraduate and postgraduate programs in-service training and continuing medical education programs. The manual is a successor of three earlier publications that are widely used throughout the world and that remain important reference texts: General Surgery at the District Hospital (WHO 1988), Surgery at the District Hospital: Obstetrics Gynecology Orthopedics and Traumatology (WHO 1991), Anesthesia at the District Hospital (WHO 1988; second edition 2000). This new manual draws together material from these three

publications into a single volume which includes new and updated material, as well as material from Managing Complications in Pregnancy and Childbirth: A Guide for Midwives and Doctors (WHO 2000).

It is widely accepted that the machinery of multicultural societies and liberal democratic systems is dependent upon various forms of dialogue - dialogue between political parties, between different social groups, between the ruling and the ruled. But what are the conditions of a democratic dialogue and how does the philosophical dialogic approach apply to practice? Recently, facing challenges from mass protest movements across the globe, liberal democracy has found itself in urgent need of a solution to the problem of translating mass activity into dialogue, as well as that of designing borders of dialogue. Exploring the multifaceted nature of the concepts of dialogue and democracy, and critically examining materializations of dialogue in social life, this book offers a variety of perspectives on the theoretical and empirical interface between democracy and dialogue. Bringing together the latest work from scholars across Europe, Democracy in Dialogue, Dialogue in Democracy offers fresh theorizations of the role of dialogue in democratic thought and practice and will appeal to scholars of sociology, political science and social and

political theory.

The previous edition won first Prize (Surgery category) at the BMA Awards 2005. The judges' comment: 'A comprehensive and attractively presented 4-colour textbook of surgery aimed primarily at medical students but also of use to junior doctors and surgical technicians. The book has two key features: firstly, it provides students with coverage of every aspect of surgery; secondly, it has been designed and written to be the 'surgical companion' to Kumar & Clark's Clinical Medicine. This new edition will also offer an online version to all purchasers of the book - the first surgical textbook in the UK to make an electronic version available.' A comprehensive account of surgery - students only need to buy one text Covers general issues such as wound healing and pain control in the first section. By grouping these issues into one section at the beginning, students are immediately given an overview of what makes surgery different A regional approach is adopted for the largest section - section 2 - this reflects the way in which surgeons talk about surgery to each other The third section covers surgical specialities - paediatrics, endocrinology, urology - and also includes specialities such as ophthalmology, ENT and orthopaedics. These are often omitted from competing books to save space The logical arrangement of the three sections makes the book easy to use and refer to in clinical practice The arrangement of contents is straightforward and easily understood Text boxes are used throughout to highlight and isolate important information Includes over 350 four-colour images and line drawings original to this book and greatly praised by students Also includes over 100 black and white and approximately 50 full-colour clinical photographs, X-

rays and scans Designed to complement Kumar and Clark's highly successful Clinical Medicine textbook so that students can have 'matching' texts in these complementary areas Written by an expert team of contributors Your purchase of this book entitles you to online access to the text at no extra charge. This innovative web site offers you... Access to the complete text and illustrations of this book. Integration links to bonus content in other Elsevier online titles.
