Dispatches of radical political engagement from people taking a stand against the Dakota Access Pipeline It is prophecy. A Black Snake will spread itself across the land, bringing destruction while uniting Indigenous nations. The Dakota Access Pipeline is the Black Snake, crossing the Missouri River north of the Standing Rock Indian Reservation. The oil pipeline united communities along its path—from North Dakota, South Dakota, Iowa, and Illinois—and galvanized a twenty-first-century Indigenous resistance movement marching under the banner Mni Wiconi—Water Is Life! Standing Rock youth issued a call, and millions around the world and thousands of Water Protectors from more than three hundred Native nations answered. Amid the movement to protect the land and the water that millions depend on for life, the Oceti Sakowin (the Dakota, Nakota, and Lakota people) reunited. A nation was reborn with renewed power to protect the environment and support Indigenous grassroots education and organizing. This book assembles the multitude of voices of writers, thinkers, artists, and activists from that movement. Through poetry and prose, essays, photography, interviews, and polemical interventions, the contributors, including leaders of the Standing Rock movement, reflect on Indigenous history and politics and on the movement's significance. Their work challenges our understanding of colonial history not simply as "lessons learned" but as essential guideposts for current and future activism. The Web has been with us now for almost 25 years. An integral part of our social, cultural and political lives, 'new media' is simply not that new anymore. Despite the rapidly expanding archives of information at our disposal, and the recent growth of interest in web history as a field of research, the information available to us still far outstrips our understanding of how to interpret it. The SAGE Handbook of Web History marks the first comprehensive review of this subject to date. Its editors emphasise two main different forms of study: the use of the web as an historical resource, and the web as an object of study in its own right. Bringing together all the existing knowledge of the field, with an interdisciplinary focus and an international scope, this is an incomparable resource for researchers and students alike. Part One: The Web and Historiography Part Two: Theoretical and Methodological Reflections Part Three: Technical and Structural Dimensions of Web History Part Four: Platforms on the Web Part Five: Web History and Users, some Case Studies Part Six: The Roads Ahead

Graduate Programs in Business, Education, Information Studies, Law & Social Work 2015 (Grad 6) John Wiley & Sons

The nursing profession is under pressure. Financial demands, student debt, the target culture, political scrutiny in the wake of major care scandals and increasing workloads are all taking their toll on professional morale and performance. This timely book considers the meaning of resilience in this adverse context and explains why measures to preserve individual nurses' and students' well-being are flawed if they don't take into account wider political and organizational perspectives. Arguing that healthcare can be thought about and experienced differently, this book: provides a summary of the latest research on resilience, explaining its relevance and also limitations for nurses; considers debates about compassion and highlights the effects of policy agendas on nurse education and nursing work; re-evaluates nursing's professional identity, including where nursing has come from and the effects of class, gender and race on its powerbase; assesses the role of politics and social media, both in driving change and feeding resistance; and introduces the idea of critical resilience as a complete framework for resisting bullying and fostering survival and change in the nursing workforce. Direct, upbeat, at times provocative and witty, this agenda-setting book enables nurses

to understand why they feel the way they do. It also lists what opportunities are available to them to change, resist and survive in what has become a complex, challenging - if still deeply rewarding - line of work.

Teaching English as a Foreign Language in Indonesia faces many obstacles. Firstly, English is not day to day used so the students have difficulty to practice it. They only use it in the limited time classroom, so teachers have difficulty to make authentic situation for the students to practice the language outside the class. Second obstacle is the students' bad experiences during their previous schooling in learning English. The students come from different school background; some remote school may not have good teachers, especially in teaching English. Even some students have bad impression that make them hate English. The last thing is teachers still have problem to access updated book, journals, etc. to help them teach English better. This book is to help both teachers and students to enjoy the process of teaching and learning. Materials given are mostly authentic from internet or medication information. The authenticity of the material can give additional motivation for the students.

Delivering high quality, effective, compassionate care: developing the right people with the right skills and the right values University of Toronto Press

While vast numbers of nurses across the globe contribute in all areas of healthcare delivery from primary care to acute and long-term care in community settings, there are significant differences in how they are educated, as well as the precise nature of their practice. This comprehensive handbook provides a research-informed and international perspective on the critical issues in contemporary nurse education. As an applied discipline, nursing is implemented differently depending on the social, political and cultural climate in any given context. These factors impact on education, as much as on practice, and are reflected in debates around the value of accredited programmes, and on-the-job training, apprenticeship, undergraduate and postgraduate pathways into nursing. Engaging with these debates amongst others, the authors collected here discuss how, through careful design and delivery of nursing curricula, nurses can be prepared to understand complex care processes, complex healthcare technologies, complex patient needs and responses to therapeutic interventions, and complex organizations. The book discusses historical perspectives on how nurses should be educated; contemporary issues facing educators; teaching and learning strategies; the politics of nurse education; education for advanced nursing practice; global approaches; and educating for the future. Bringing together leading authorities from across the world to reflect on past, present and future approaches to nurse education and nursing pedagogy, this handbook provides a cutting-edge overview for all educators, researchers and policy-makers

concerned with nurse education.

Bioremediation is an emerging field of environmental research. The objective of a bioremediation process is to immobilize contaminants (reactants) or to transform them into chemical products that do not pose a risk to human health and the environment. Toxicity and Waste Management Using Bioremediation provides relevant theoretical and practical frameworks and the latest empirical research findings on the remediation of contaminated soil and groundwater using bioorganisms. Focusing on effective waste treatment methodologies and management strategies that lead to improved human and environmental health, this timely publication is ideal for use by environmental scientists, biologists, policy makers, graduate students, and scholars in the fields of environmental science, chemistry, and biology.

Toxicity and Waste Management Using Bioremediation Springer

This book takes up the problems of social policy, state intervention and support in the hard times of austerity introduced by the Coalition government 2010-15, and continued under the Conservative government today. At a time when the economy is growing and pay levels finally rising, the necessity for more cuts in public expenditure is fiercely contested. The scope of state services, the levels of support for people in need, and the kinds of organizations that will deliver the services, will all be profoundly affected in coming years. The authors and editors assess some of these consequences visible now in the impact that expenditure cuts and reorganization have had on many areas of social policy, and explore the direction of change in the near future. Austerity Policies evaluates a wide range of changing form of state services and the transformations involving both the recipients and those delivering the services. It considers the past, present and future of austerity as a policy, and the problems affecting particular groups such as offenders, looked after children, and professionals such as social care workers and those engaged with domestic violence. The collection will be of interest to students and scholars of social policy, criminology, sociology, politics and media studies.

Donaldson's Essential Public Health has been in continuous print for 35 years, evolving through successive editions. This unrivalled record of success for a textbook of public health shows the enduring appeal of its content, style, and accessibility to generations of students and practitioners. For many of today's national and global public health leaders, the book was their guide as they began their careers, their benchmark as they passed their examinations and professional accreditation, and remains their companion as a source of reference and refreshed knowledge for teaching and practice. The book brings together, in one volume, the main health problems experienced by populations and by the key groups within them, the strategies for promoting health and preventing disease, the principles and applications of epidemiology, the main themes of health policy, and a description of health service provision. This fourth edition marks the biggest change to the book in 20 years. For the first time it sets each key subject area in a global health context, whilst retaining its traditional strength in covering population health for the United Kingdom. New and revised chapters for this edition include: Health in a changing world Communicable diseases Non-communicable diseases Social determinants of health Quality and safety of healthcare Mental health Disability Health in later life Environment and health History of public health The content is wide-ranging and written in an accessible and engaging style. It covers topics as diverse as: the story of the 2014 Ebola virus outbreak in West Africa; the elements of tobacco control policy; the health impact of climate change; the global health organisational architecture; the concept of health; the new paradigm of public mental health; the biological pathways that link to the health effects of social deprivation; the ideal of universal health coverage; the essentials of immunisation; the basis of healthy ageing; the historical events that led to the germ theory of disease and the Victorian sanitary revolution. This new edition is essential reading for all undergraduate and postgraduate students of public health, medicine, nursing, health policy, social science, and public sector management. Those embarking on a career in public health will find it of great value throughout their professional life. The book is also an extremely useful resource for established practitioners in primary care, doctors, senior nurses, health system managers, healthcare policy makers, civil servants in ministries of health, and members of boards of health organisations.

Routledge International Handbook of Nurse Education Springer

This scholarly book focuses on stroke in Africa. Stroke is a leading cause of disability among adults of all ages, contributing significantly to health care costs related to long term implications, particularly if rehabilitation is sub-optimal. Given the burden of stroke in Africa, there is a need for a book that focuses on functioning African stroke survivors and the implications for rehabilitation within the African context. In addition, there is a need to progress with contextualised, person-centred, evidence-based guidance for the rehabilitation of people with stroke in Africa, thereby enabling them to lead socially and economically meaningful lives. The research incorporated in the book used a range of primary and secondary methodological approaches (scoping reviews, systematic reviews, meta-analyses, descriptive studies, surveys, health economics, and clinical practice guideline methodology) to shed new insights into African-centred issues and strategies to optimise function post-stroke.

Though academia has the reputation of being removed from the world, in reality the worlds of the academy and politics meet frequently, and in a variety of ways--productive and unproductive. This book presents the results of the first major crossnational comparative study of academic engagement in the creation of social policy. It offers new empirical data from twelve countries across Europe, North America, and the Middle East, with each chapter providing a brief overview of social work and social work education in the country under consideration, then presenting new data on the interactions between scholars and policy makers there.

This book provides an original overall account of the history of sociology at the London School of Economics and Political Science, where the first sociology course as part of a conventional university degree programme in the UK was taught. Thus, the book is unique in its contribution to an important part of the history and development of sociology in the UK. The chapters discuss the names that - at least until the post-war period - are identified as central to the early phase of British sociology. Husbands documents the impact and influence of these leading figures through material in numerous previously little-used archives. Also explored are the culture of LSE Sociology students, their attitudes, political orientations, and academic attainments. The reputation and influence of LSE Sociology on the general development of the subject in the UK are also assessed. The book will be of interest to sociology students and scholars wanting to know about the discipline's history, as well as to those with a broader interest in higher education policy.

This volume charts new methodological territories for rhetorical studies and the emerging field of the rhetoric of health and medicine. In offering an expanded, behind-the-scenes view of rhetorical methodologies, it advances the larger goal of differentiating the rhetoric of health and medicine as a distinct but pragmatically diverse area of study, while providing rhetoricians and allied scholars new ways to approach and explain their research. Collectively, the volume's 16 chapters: Develop, through extended examples of research, creative theories and methodologies for studying and engaging medicine's high-stakes practices. Provide thick descriptions of and heuristics for methodological invention and adaptation that meet the needs of needs of new and established researchers. Discuss approaches to researching health and medical rhetorics across a range of contexts (e.g., historical, transnational, socio-cultural, institutional) and about a range of ethical issues (e.g., agency, social justice, responsiveness).

Disarmament, Demobilization and Reintegration in Southern Africa SAGE

The research results presented in this book span the quest of Cape Kingdom Nutraceuticals, Prof. Patrick Bouic and Prof. Barbara Huisamen to scientifically validate the health promoting properties of an aqueous extract of the plant *Agathosma*. To accomplish this, they made use of both in vitro and in vivo models to understand and underscore the anecdotal information of the benefits of this product. Cell based studies highlighted anti-inflammatory and anti-diabetic effects while animal-based studies were utilized to confirm the anti-diabetic effects whilst further elaborating on anti-obesity properties. In addition, technology aimed at small animals were used to follow blood pressure to demonstrate anti-hypertensive effects while ex vivo perfused hearts were studied to show that this extract also protected the heart against an ischaemic incident. In view of the current pandemic of obesity and non-communicable diseases, the research results presented in this book will be of special interest to the scientific community and health practitioners interested in cardiometabolic diseases and nutraceuticals as an alternative treatment option. In view of the failure of many pharmaceuticals to curb non-communicable diseases, these results are deemed of high importance.
