HANNAH SOLIS

Younger Scholars African Books Collective

This book introduces key issues in understanding social and cultural factors as they relate to mental health and illness, and to a southern African understanding and construction of these categories. It lays out central international and local debates in the field of mental health in an accessible way, making use of extensive research and case studies. Central theoretical debates (such as those between relativism and universalism, and between hermeneutical and critical approaches) are presented early in the text, and referred to throughout the more applied chapters. The aim is to equip the reader to assess the strengths and weaknesses of different approaches to understanding specific aspects of mental health and illness. Stressed throughout is the role of the mental health professional in the construction of ideas of mental health and illness.

Nursing Research Springer Publishing Company

Vygotsky at Work and Play is an intimate portrayal of the Vygotskian-inspired approach to human development known as 'social therapeutics' and 'the psychology of becoming'. Holzman provides an accessible, practical-philosophical portrayal of a unique performance-based methodology of development and learning that draws upon a fresh reading of Vygotsky. This expanded edition includes new content dealing with how Lev Vygotsky's work can be applied to profound social issues of our times, including worsening police/community relations, authoritarianism in schools, the medical-model approach to social/emotional life, and the erosion of play in Western cultures. Holzman also weaves together Vygotsky's discoveries with qualitative case studies from organizations that practice the approach in psychotherapy offices, classrooms, outside-of-school programs, corporate workplaces and virtual learning environments. The new edition of Vygotsky at Work and Play poses a practical-critical challenge to more traditional conceptions and methods of psychology and education, introducing performance as a new ontology and the author's own activist research performance as a new way to do psychology. It is an essential read for researchers and professionals in educational and developmental psychology, psychotherapy, cultural historical activity, social science, performance studies and education.

Design and Implementation of Health Information Systems Elsevier Health Sciences

Scale up and implementation of new point-of-care (POC) diagnostics is a global health priority to enable the adoption of new evidence-based POC diagnostics and to replicate and extend the reach of POC diagnostics. Global private and public sector agencies have significantly increased their investment in the development of POC diagnostics to meet the unmet needs of patients in resource-limited settings, particularly disease burdened settings with limited access to laboratory infrastructure. However, previous research has demonstrated that the availability of health technologies in these settings does not always guarantee patient-centered outcomes. The applicability, effectiveness and sustainability of diagnostic technologies is affected by the involvement of all stakeholders during planning and implementation, which must be relevant to each specific context and sensitive to local culture. Factors such as infrastructure, resources, values and characteristics of participants can influence the implementation, scalability and sustainability of health interventions such as POC diagnostics. This book, "Implementation and Scale up of Point of Care (POC) Diagnostics in Resource-Limited Settings", presents literature reviews and primary research studies focusing on the implementation and scale up of POC diagnostics in resource-limited settings.

Pesticide Toxicology George Weidenfeld & Nicholson

This book presents a comprehensive and instructive management plan for physicians who care for CKD patients. Basic aspects of CKD, clinical assessment, evaluation and management of risk factors, cardiovascular disease in the context of CKD, assessment and management of CKD complications, special circumstances in CKD patients, and the path to renal replacement therapy are all thoroughly covered. Diagnostic and therapeutic approaches are presented according to the latest staging system for CKD, with patient care being discussed separately for each disease stage. The proposed management plan is both "best available evidence based" and "practice based". The book also recognizes the needs of busy clinicians by including helpful boxes summarizing the evidence on diagnostic and therapeutic issues and practice pearls based on guidelines. The authors are recognized experts from across the world, ensuring global coverage of the problem, and most have participated in writing guidelines on CKD.

Global Tuberculosis Report 2012 Springer Science & Business Media

Winner of the first prize in the Health and Social Care category at the BMA Medical Book Awards 2016. With chapters on 25 different countries, this practical and succinct guide to the world's major health systems explores what lessons can be drawn from each to improve health worldwide. Each chapter is an essay designed to give the reader essential knowledge of the history, strengths, weaknesses and lessons of each health system and provide a truly global health perspective - all in the time it takes to drink a cup of coffee. Whether a healthcare manager or a student studying health systems, this accessible and engaging book provides a fascinating insight in to how health care is delivered around the world.

Management of Chronic Kidney Disease Createspace Independent Publishing Platform

This book provides a practical guide to the design and implementation of health information systems in developing countries. Noting that most existing systems fail to deliver timely, reliable, and relevant information, the book responds to the urgent need to restructure systems and make them work as both a resource for routine decisions and a powerful tool for improving health services. With this need in mind, the authors draw on their extensive personal experiences to map out strategies, pinpoint common pitfalls, and guide readers through a host of conceptual and technical options. Information needs at all levels - from patient care to management of the national health system - are considered in this comprehensive guide. Recommended lines of action are specific to conditions seen in government-managed health systems in the developing world. In view of common constraints on time and resources, the book concentrates on strategies that do not require large resources, highly trained staff, or complex equipment. Throughout the book, case studies and numerous practical examples are used to explore problems and illustrate solutions. Details range from a list of weaknesses that plague most existing systems, through advice on when to introduce computers and how to choose appropriate software and hardware, to the hotly debated question of whether patient records should be kept by the patient or filed at the health unit. The book has fourteen chapters presented in four parts. Chapters in the first part, on information for decision-

making, explain the potential role of health information as a managerial tool, consider the reasons why this potential is rarely realized, and propose general approaches for reform which have proved successful in several developing countries. Presentation of a six-step procedure for restructuring information systems, closely linked to an organizational model of health services, is followed by a practical discussion of the decision-making process. Reasons for the failure of most health information to influence decisions are also critically assessed. Against this background, the second and most extensive part provides a step-by-step guide to the restructuring of information systems aimed at improving the quality and relevance of data and ensuring their better use in planning and management. Steps covered include the identification of information needs and indicators, assessment of the existing system, and the collection of both routine and non-routine data using recommended procedures and instruments. Chapters also offer advice on procedures for data transmission and processing, and discuss the requirements of systems designed to collect population-based community information. Resource needs and technical tools are addressed in part three. A comprehensive overview of the resource base - from staff and training to the purchase and maintenance of equipment - is followed by chapters offering advice on the introduction of computerized systems in developing countries, and explaining the many applications of geographic information systems. Practical advice on how to restructure a health information system is provided in the final part, which considers how different interest groups can influence the design and implementation of a new system, and proposes various design options for overcoming specific problems. Experiences from several developing countries are used to illustrate strategies and designs in terms of those almost certain to fail and those that have the greatest chances of success

Doctoral Education in South Africa LWW

Nurses are often said to be the backbone of health services, but in South Africa their profession itself is in need of care. This monograph considers the profile, image and status of nursing today and the nature and role of nursing education. A major concern is that, although nursing still attracts many more students than there are places available, the gap between the large numbers who complete their training and the relatively small growth in the professional registers, indicates high attrition rates. The decline in the role of the public sector in the training of nurses is another worrying trend.

Making Education Inclusive LWW

This scholarly book focuses on stroke in Africa. Stroke is a leading cause of disability among adults of all ages, contributing significantly to health care costs related to long term implications, particularly if rehabilitation is sub-optimal. Given the burden of stroke in Africa, there is a need for a book that focuses on functioning African stroke survivors and the implications for rehabilitation within the African context. In addition, there is a need to progress with contextualised, person-centred, evidence-based guidance for the rehabilitation of people with stroke in Africa, thereby enabling them to lead socially and economically meaningful lives. The research incorporated in the book used a range of primary and secondary methodological approaches (scoping reviews, systematic reviews, meta-analyses, descriptive studies, surveys, health economics, and clinical practice guideline methodology) to shed new insights into African-centred issues and strategies to optimise function post-stroke.

How to Nurse Springer

This detailed volume explores practical procedures on the identification and quantification of pesticides in a variety of samples. Chapters guide the reader through methods and protocols for the extraction of pesticides from biological and non-biological samples, pitfalls in dosing techniques and structures identification, and also provide an overview of the problems that these pesticides cause in human populations. As part of the Methods in Pharmacology and Toxicology series, chapters include introductions to their respective topics, lists of reagents and materials, step-by-step guides and reproducible lab protocols, as well as valuable tips on addressing common problems and avoiding known pitfalls. Authoritative and practical, Pesticide Toxicology is an ideal reference for academia, analysts, toxicologists, environmentalists, and health and industry professionals aiming to understand the associated risks and to limit the use of these substances and minimize their potential damage to human health and the environment.

Piaget and His School Disease Control Priorities

Worldwide, in Africa and in South Africa, the importance of the doctorate has increased disproportionately in relation to its share of the overall graduate output over the past decade. This heightened attention has not only been concerned with the traditional role of the PhD, namely the provision of future academics; rather, it has focused on the increasingly important role that higher education and, particularly, high-level skills is perceived to play in national development and the knowledge economy. This book is unique in the area of research into doctoral studies because it draws on a large number of studies conducted by the Centre of Higher Education Trust (CHET) and the Centre for Research on Evaluation, Science and Technology (CREST), as well as on studies from the rest of Africa and the world. In addition to the historical studies, new quantitative and qualitative research was undertaken to produce the evidence base for the analyses presented in the book. The findings presented in Doctoral Education in South Africa pose anew at least six tough policy questions that the country has struggled with since 1994, and continues to struggle with, if it wishes to gear up the system to meet the target of 5 000 new doctorates a year by 2030. Discourses framed around the single imperatives of growth, efficiency, transformation or quality will not, however, generate the kind of policy discourses required to resolve these tough policy questions effectively. What is needed is a change in approach that accommodates multiple imperatives and allows for these to be addressed simultaneously.

Nursing in a New Era IOS Press

Annotation Kearney, a clinical child psychologist at the U. of Nevada, Las Vegas, has written his book mainly with the school psychologist in mind. The problem of school refusal is put into a context in initial chapters which give an overview of the historical literature on school refusal behavior and describe the characteristics of these youth, while also critiquing the classification strategies employed. After introducing a functional model, Kearney summarizes treatment strategies and discusses methods for prevention as well as the reality of extreme cases. Annotation c. Book News, Inc., Portland, OR (booknews.com).

Nurses With Disabilities Cambridge Scholars Publishing

"Research methodology is a dynamic enterprise. Even after writing 10 editions of this book, we have continued to draw new material and inspiration from ground-breaking advances in research methods

and in nurse researchers' use of those methods. It is thrilling to share many of those developments in this new edition. We expect that many of the new methodologic and technological enhancements will be translated into powerful evidence for nursing practice. Four years ago, we considered the 10th edition as a watershed edition of a classic textbook, having added two new chapters. We are persuaded, however, that this 11th edition is even better than the previous one. We have retained many features that made this book a classic textbook and resource, including its focus on research as a support for evidence-based nursing, but have introduced important innovations that we hope will help to shape the future of nursing research"--

Disability and the Dilemmas of Education and Justice Pearson South Africa

Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.

Management of Spinal Cord Injuries E-Book World Health Organization

How can ethnographic studies be generalized, in contrast to concentrating on the individual case? Noblit and Hare propose a new method for synthesizing from qualitative studies: meta-ethnography. After citing the criteria to be used in comparing qualitative research projects, the authors define the ways these can then be aggregated to create more cogent syntheses of research. Using examples from numerous studies ranging from ethnographic work in educational settings to the Mead-Freeman controversy over Samoan youth, Meta-Ethnography offers useful procedural advice from both comparative and cumulative analyses of qualitative data. This provocative volume will be read with interest by researchers and students in qualitative research methods, ethnography, education, sociology, and anthropology. "After defining metaphor and synthesis, these authors provide a step-by-step program that will allow the researcher to show similarity (reciprocal translation), difference (refutation), or similarity at a higher level (lines or argument synthesis) among sample studies....Contain(s) valuable strategies at a seldom-used level of analysis." --Contemporary Sociology "The authors made an important contribution by reframing how we think of ethnography comparison in a way that is compatible with the new developments in interpretive ethnography. Meta-Ethnography is well worth consulting for the problem definition it offers." --The Journal of Nervous and Mental Disease "This book had to be written and I am pleased it was. Someone needed to break the ice and offer a strategy for summarizing multiple ethnographic studies. Noblit and Hare have done a commendable job of giving the research community one approach for doing so. Further, no one else can now venture into this area of synthesizing qualitative studies without making references to and positioning themselves vis-a-vis this volume." -Educational Studies

Vygotsky at Work and Play W.B. Saunders Company

"The World Health Organization (WHO) Global Tuberculosis Report 2012 provides the latest information and analysis about the tuberculosis (TB) epidemic and progress in TB care and control at global, regional and country levels. It is based primarily on data reported by WHO's Member States in annual rounds of global TB data collection. In 2012, 182 Member States and a total of 204 countries and territories that collectively have more than 99% of the world's TB cases reported data."--Executive summary, p. 1

Promoting Community Health Humana

This book constitutes the proceedings of two conferences: The 6th International Conference on ArtsIT, Interactivity and Game Creation (ArtsIT 2017) and the Second International Conference on Design, Learning and Innovation (DLI 2017). The event was hosted in Heraklion, Crete, Greece, in October 2017 and attracted 65 submissions from which 50 full papers were selected for publication in this book. The papers represent a forum for the dissemination of cutting-edge research results in the area of arts, design and technology, including open related topics like interactivity and game creation.

Facing Addiction in America HSRC Press

Nursing informatics has a long history of focusing on information management and nurses have a long history of describing their computer use. However, based on the technical advances and through the ongoing and consistent changes in healthcare today, we are now challenged to look to the future and help determine what nurses and patients/consumers will need going forward. This book presents the proceedings of the Post Conference to the 13th International Conference on Nursing Informatics, held in Geneva, Switzerland, in June 2016. The theme of the Post Conference is Forecasting Informatics Competencies for Nurses in the Future of Connected Health. This book includes 25 chapters written as part of the Post Conference; a result of the collaboration among nursing informatics experts from research, education and practice settings, from 18 countries, and from varying levels of expertise - those beginning to forge new frontiers in connected health and those who helped form the discipline. The book content will help forecast and define the informatics competencies for nurses in practice, and as such, it will also help outline the requirements for informatics training in nursing programs around the world. The content will aid in shaping the nursing practice that will exist in our future of connected health, when practice and technology will be inextricably intertwined.

Bioethics, Human Rights and Health Law 2e Bloomsbury Publishing

Exclusionary pressures and practices are pervasive in education, despite the clamour for more inclusive education. Even as classrooms worldwide become more diverse, education is unlikely to become inclusive without deliberate efforts to dismantle exclusion and enable inclusion. This book is a compilation of contributions to the conversation about what these efforts might entail. The conversation has its origins in the Making Education Inclusive Conference held in 2013, which brought together academics and practitioners from Southern Africa and other countries. Given the expectation that teachers should play a key role in promoting inclusion, it is not surprising to find significant interest in teacher education from many of the contributing authors. Their concerns range from explicit teacher development for pedagogical responsiveness to learner diversity, to overcoming the epistemological marginalisation that learners experience where teachers are not fully confident of their subject content and how to teach it. Access to education is clearly not enough, and other contributors to this book concern themselves with ways in which structures and systems could be reconstituted to enable meaningful inclusion. This might mean looking at how teachers might use tiered systems of behaviour support and various metacognitive strategies, how physical access can be promoted on a university campus, and understanding how parents think about disability. Each chapter represents a different perspective on what it might mean to resist educational exclusion in its many forms, and each offers possible ways to make education more inclusive.

Health Service Marketing Management in Africa Mosby

Health Service Marketing Management in Africa (978-0-429-40085-8, K402492) Shelving Guide: Business & Management / Marketing Management The application of marketing to healthcare is a fascinating field that will likely have more impact on society than any other field of marketing. It's been theorized that an intrinsically unstable environment characterizes this very relevant emerging field, hence raising new questions. Changing regulations, discoveries, and new health treatments continuously appear and give rise to such questions. Advancements in technology not only improve healthcare delivery systems but also provide avenues for customers to seek information regarding their health conditions and influence their participatory behaviors or changing roles in the service delivery. Increasingly, there is a shift from a doctor-led approach to a more patient-centered approach. In Africa, the importance of marketing-driven practices in improving the delivery of healthcare services cannot be overemphasized. The issue of healthcare delivery and management is significant for policymakers, private sector players, and consumers of health-related services in developing economy contexts. Scholars have strongly argued in favor of marketing and value creation in healthcare service delivery in Africa. Each country in Africa has its own issues. For example, long waiting times, unavailable medications, and unfriendly staff are just a sampling of issues affecting the acceptability of healthcare services. These examples highlight the need to utilize marketing and value creation tools in the delivery of healthcare services. Furthermore, there is a need for the integration of service marketing and management principles to enhance the delivery of quality healthcare across Africa and other developing economies which is the critical focus of this book. This book responds to calls for quality healthcare service management practices or processes from developing economy perspectives. Focusing primarily on African and other developing economy contexts, this book covers seven thematic areas: strategy in healthcare; marketing imperatives in healthcare management; product and pricing management in healthcare; distribution and marketing communications in healthcare; managing people in healthcare; physical evidence and service quality management in healthcare; and process management in healthcare.
