DANIKA ELIANNA

[Plant Tissue Culture Manual - Supplement 7](#) Springer

Plant tissue culture has a long history, dating back to the work of Gottlieb Haberlandt and others at the end of the 19th century, but the associated concepts and techniques have reached a level of usefulness and application which has never been greater. The technical innovations have given new insights into fundamental aspects of plant differentiation and development, and have paved the way to the identification of strategies for the genetic manipulation of plants. It is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds, including those with little or no previous experience. The themes of the manual aim to reflect those research areas which have been advanced by tissue culture technology. As was the case for the sister volume Plant Molecular Biology Manual, the objective has been from the start to produce a manual which is at home on the laboratory bench. The plastic-covered, ring-bound format has proved to be most popular and is retained here. Equally, the emphasis has been on producing a collection of detailed step-by-step protocols, each supplemented with an introductory text and practical footnotes, to provide the next best thing to a supervisor at one's shoulder.

Catalog of Printed Books. Supplement Springer Science & Business Media

Description of the Product: • 100% Updated with newly added Topics and Concepts as per NMC NEET updated Syllabus • Extensive Practice with 2500+ Chapter-wise Questions & 2 Practice Question Papers • Crisp Revision with Revision Notes, Mind Maps, Mnemonics, and Appendix • Curated with Expert Tips to Crack NEET Exam in the 1st attempt • Concept Clarity with Extensive Explanations of NEET previous years' papers • 100% Exam Readiness Comprehensive comparative chart between 2023 & 2024 syllabus • Valuable exam insights 150+ Questions based on new topics/concepts for practice

"Report of the joint librarians of Parliament" (in English and French) included in each number.

[Library Catalog of the Metropolitan Museum of Art, New York. Supplement](#) Oswaal Books

Includes proceedings of American Association of Textile Chemists and Colorists.

[Aeronautical Engineering: A Cumulative Index to a Continuing Bibliography \(supplement 248\)](#) Springer Science & Business Media

This volume comprises the compounds of thorium with the 4th main group elements silicon and germanium and all 5th main group elements except nitrogen. On the subject of ternary and polynary compounds containing oxygen, only those compounds with phosphorus are included (e.g., phosphates, hypophosphates, or phosphinates). Similar compounds of the other elements like silicates, arsenates, etc. were already treated in "Thorium" Suppl. Vol. C 2, 1976. Most of the compounds in the different systems treated in this volume are of scientific interest because of their special physical and chemical properties. On the other hand, there are also many compounds which are of specific technological interest, mainly in the nuclear field. Refractory compounds like ThSi or ThP have potential interest as nuclear fuel for special reactors due to their physical properties like good heat conductivity and their chemical stability, e.g., against the corrosion of cladding alloys for nuclear fuel elements. Due to the present situation in the further development of the thorium nuclear fuel cycle, their large potential has not yet been fully investigated. For most of the binary and ternary phases in these systems, we presently have good knowledge about the preparation of the compounds and their physical and chemical properties. But nevertheless, there are still a lot of open questions concerning phase equilibria, solid solutions, and homogeneity of some of the phases described in this volume.

Bone marrow adiposity: Contributions to bone, aging, and beyond Springer

The modern biosciences make many new proteins available. Nevertheless the handling of these proteins is quite difficult due to problems with their

stability. This updated and revised collection gives - in the form of tables - protein stability data for various temperatures and solvents.

The Century Dictionary Supplement Georg Thieme Verlag

Includes section, "Recent book acquisitions" (varies: Recent United States publications) formerly published separately by the U.S. Army Medical Library.

Oswaal NTA NEET (UG) PLUS Supplement For Additional Topics as per NMC NEET Updated Syllabus and 36 Years' NEET UG Solved Papers Chapterwise & Topicwise Physics, Chemistry & Biology 1988-2023 (Set of 4 Books) (For 2024 Exam) Springer Science & Business Media

A bibliography of lunar and planetary research articles published during 1967 is presented with both subject and author listings. The major subject categories are: astrobology, comets, meteorite craters and cratering effects, meteors and meteorites, the moon, origin of the solar system, the planets, and tektites. Each article is abstracted.

Issued as volume 8 of Dictionary of inorganic compounds.

Sotheran's Price Current of Literature Springer Science & Business Media

In 1998, we published the data compilation PROTEIN STABILITY AND FOLDING which covered the data from the early beginnings of thermodynamic studies of protein folding until 1996. Since then, the amount of available thermodynamic data has increased nearly twice. The data constitute very important additions to the information on the protein folding problem, the construction of mutant protein, and the practical application of proteins in various fields. The Supplement covers the period 1997-1999 and is designed to make the vast amount of present data accessible to multidisciplinary research where chemistry, physics, biology, and medicine are involved and also biotechnology, pharmaceutical and food research. At the same time the data could be helpful to identify problems unsolved so far, and to avoid unnecessary duplication of scientific work. The structure of the Supplement is the same as in the previous data compilation. However, some additional data characterizing protein-denaturant interaction and protein unfolding by trifluoroethanol have been added. In that context, some previous data have been reconsidered. The author wishes to thank everyone who provided data, ideas, or even unpublished results. Furthermore, support by the Deutsche Forschungsgemeinschaft (INK 16 BI-I) is gratefully acknowledged. Finally, I would like to thank the staff of Springer Verlag for their efforts and for excellent assistance during the production of the data collections.

Houben-Weyl is the acclaimed reference series for preparative methods in organic chemistry, in which all methods are organized according to the class of compound or functional group to be synthesized. The Houben-Weyl volumes contain 146 000 product-specific experimental procedures, 580 000 structures, and 700 000 references. The preparative significance of the methods for all classes of compounds is critically evaluated. The series includes data from as far back as the early 1800s to 2003. // The content of this e-book was originally published in 1987.
