The present work contains a brief study of the various facets of Mithila folk-arts and paintings, which are unique in character having few parallels. Of late there has been great talk about this painting, the central inspiration of which revolves round popular religious themes and natural surroundings. They reflect the self-control and serenity of Maithila life and the definite theocratic and aristocratic organizations of Maithila society. The women painters of Mithila aimed at giving clear and edifying expression to certain intuitions, which formed part of their religion. The different forms of floor-drawings (Aripana) and walk-paintings (bhitti-citra) provide information on customs and costumes and

rituals and religion which otherwise may remain unnoticed. The volume further explains in detail the religious and spiritual significance of the folk-arts and paintings of Mithila by means of copious references to Sanskrit texts, both sacred and secular. The paintings, as they are, constitute not merely a heap of drawings but a visible symbol of aspirations of pious ladies, and the throbbings of their hearts in religious fervour. A work of inestimable interest both for the specialist and for the connoisseur interested in the study of Indian paintings, this comprehensive and authoritative volume on Madhubani painting and other folk-arts of Mithila will prove of immense help to students of Indian culture.

Case method in Management Education (Vol II) Springer Nature  
From the reviews: "...A class in nanoscale science and technology is daunting for the educator, who must organize a large collection of materials to cover the field, and for the student, who must

absorb all the new concepts. This textbook is an excellent resource that allows students from any engineering background to quickly understand the foundations and exciting advances of the field. The example problems with answers and the long list of references in each chapter are a big plus for course tutors. The book is organized into seven sections. The first, nanoscale fabrication and characterization, covers nanolithography, self-assembly, and scanning probe microscopy. Of these, we enjoyed the section on nanolithography most, as it includes many interesting details from industrial manufacturing processes. The chapter on self-assembly also provides an excellent overview by introducing six types of intermolecular interactions and the ways these can be employed to fabricate nanostructures. The second section covers nanomaterials and nanostructures. Out of its 110 pages, 45 are devoted to carbon nanotubes. Fullerenes and quantum dots each have their own chapter that focuses on the properties and applications of these nanostructures. Nanolayer, nanowire, and nanoparticle composites of metals and semiconductors are briefly covered (just 12 pages), with slightly more discussion of specific applications. The section on nanoscale electronics begins with a history of microelectronics before discussing the difficulties in shrinking transistor size further. The discussion of problems (leakage current, hot electrons, doping fluctuations, etc.) and possible solutions (high- $k$  dielectrics, double-gate devices) could easily motivate deeper discussions of nanoscale electrical transport. A chapter on molecular electronics considers transport through alkanes, molecular transistors, and DNA in a simple, qualitative manner we found highly instructive. Nanoscale magnetic systems are examined in the fourth section.

The concept of quantum computation is nicely presented, although the discussion of how this can be achieved with controlled spin states is (perhaps necessarily) not clear. We found the chapter on magnetic storage to be one of the most lucid in the book. The giant magnetoresistive effect, operation of spin valves, and issues in magnetic scaling are easier to understand when placed in the context of the modern magnetic hard disk drive. Micro- and nanoelectromechanical systems are covered with an emphasis on the integration of sensing, computation, and communication. Here, the student can see advanced applications of lithography. The sixth section, nanoscale optoelectronics, describes quantum dots, organic optoelectronics, and photonic crystals. The chapter on organic optoelectronics is especially clear in its discussion of the fundamentals of this complicated field. The book concludes with an overview of nanobiotechnology that covers biomimetics, biomolecular motors, and nanofluidics. Because so many authors have contributed to this textbook, it suffers a bit from repetition. However, this also allows sections to be omitted without any adverse effect on student comprehension. We would have liked to see more technology to balance the science; apart from the chapters on lithography and magnetic storage, little more than an acknowledgment is given to commercial applications. Overall, this book serves as an excellent starting point for the study of nanoscale science and technology, and we recommend it to anyone with a modest scientific background. It is also a great vehicle to motivate the study of science at a time when interest is waning. Nanotechnology educators should look no further." (MATERIALS TODAY, June 2005)

It is now over two decades since the Hindi-film heroine drove the vamp into extinction, and even longer since the silver screen was ignited by the true Bollywood version of a cabaret. Yet, Helen – nicknamed ‘H-Bomb’ at the height of her career – continues to rule the popular imagination. Improbably, for a dancer and a vamp she has become an icon. Jerry Pinto’s gloriously readable book is a study of the phenomenon that was Helen: Why did a refugee of French-Burmese parentage succeed as wildly as she did in mainstream Indian cinema? How could otherwise conservative families sit through, and even enjoy, her ‘cabarets’? What made Helen ‘the desire that you need not be embarrassed about feeling’? How did she manage the unimaginable: vamp three generations of men on screen? Equally, the book is a brilliantly witty and provocative examination of middle-class Indian morality; the politics of religion, gender and sexuality in popular culture; and the importance of the song, the item number and the wayward woman in Hindi cinema.

...when all roads come to an end, the magical road begins... This tale follows a young Indian girl who believes in the idea of a soul mate. Guided by certain dreams, she takes on the voyage of her heart, magically navigating Asia, Europe, Africa, South-North-Central America... Through synchronous events, Boi meets a mysterious man she believes is her soul mate. But then the love she’s just found is lost because of her own fears. She must battle the dark nights of her soul, or remain discontent the rest of her life. Thus begins the inner journey. Her heart nudges, and like a fallen leaf, she flies in the direction of her dreams blindly, with only signs wrapped in the sheets of desire guiding her. The day Boi decides to listen to her heart, it compels her to bare her soul naked to this man, for he is her magicNine! Over the next three years, she writes to him the story of her heart, sometimes trying to impress him with her knowledge of the universe, at other times desperate to revive her lost love, yet never giving up until the writing takes on a life of its own, and the saga of her life unfolds in the pages of this book through myriad musings mailed to him over millions of moments of madness, melody, and magic. Words flow to her from all corners of the universe, pushing her story in a

collage of expressions, a piece from here, a text from there, a poem from nowhere, all of which fit the jigsaw of her life story, one she is reluctant to write... In search of her soul mate, she met with her own soul!

This unique book brings together high-quality research contributions on ecological aspects of urbanization, water quality concerns in an urban environment, and climate change issues with a strong Indian focus under one umbrella. It includes several case studies that discuss urban water management, particularly highlighting the quality aspects. Urbanization is an ecological disturbance that the modern world accepts as essential in the absence of a better alternative that could provide an equal level of comfort. The prohibitive costs of eco-friendly production technologies are forcing the developing world to generate industrial waste that is detrimental to the environment. At the same time, the availability of adequate fresh water is another challenge for our climate-change impacted world. The scientific community is, therefore, searching for ways towards ecologically sustainable urban development. Discussing all these issues, this book offers a useful guide for academicians, researchers, practicing engineers, and managers dealing with diverse water-related problems in urban areas.

Approach your problems from the right end It isn't that they can't see the solution. It is and begin with the answers. Then one day, that they can't see the problem. perhaps you will find the final question. G. K. Chesterton. The Scandal of Father 'The Hermit

Clad in Crane Feathers' in R. Brown 'The point of a Pin'. van Gujik's The Chinese Maze Murders. Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the "tree" of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non-trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, coding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. And in addition to this there are such newemerging subdisciplines as "experimental mathematics", "CFD", "completely integrable systems", "chaos, synergetics and large-scale order", which are almost impossible to fit into the existing classification schemes. They draw upon widely different sections of mathematics.

The Periplus of the Erythraean Sea is a short work of uncertain date and unknown authorship, written in very difficult Greek. It is concerned with the coasts of the Red Sea and Indian Ocean and may be described as a combined trade directory and Admiralty Handbook, giving sailing directions and information about navigational hazards, harbours, imports and exports. It is of great

value for the study of the commerce of the Roman Empire and the early history of East Africa, South Arabia and India. This is a new print-on-demand hardback edition of the volume first published in 1980.

Trading the Forex Market can be exciting, adventurous, and financially rewarding. It can also be disastrous for those who are unprepared for its rhythms and movements. Now, Jared F. Martinez, one of the foremost experts in currency trading, draws upon his vast knowledge and experience to deliver 10 key practices for trading in Forex. The 10 Essentials of Forex Trading shows you how to use charting methods to effectively relate market movements to trading patterns-and turn those patterns into profit. No matter your level of trading experience, you can develop the skills you need to become a consistently successful foreign currency trader-from using the right trading tools and balancing equity management to trading in buy and sell zones and identifying trends and trendlines. You'll discover what drives the Forex market and how to navigate the three stages of Forex trading: acquiring new trading rules, controlling disciplined thought, and implementing disciplined action. Martinez also prepares you to: Understand the financial game of support and

resistance between Bulls & Bears Use Japanese Candlesticks to discern the sign language of the market Create an entry strategy and a consistent exit strategy Use Fibonacci as part of your trading approach Forecast sideways movement in the market-and trade it Martinez shows you how to put it all together to execute a successful trade by finding convergence and analyzing the market on multiple timeframes. You'll also learn how to gain control over your emotions-a vital part of trading on Forex-and eliminate bad habits that can prevent you from becoming a confident, competent, and profitable trader. To trade the Forex market, you must come to the trading table prepared. The 10 Essentials of Forex Trading arms you with the tools to develop a solid personal trading constitution and reap the financial outcome you desire.

Whether you're a full-time trader looking to make a living or a part-time trader looking to make some extra money, the foreign exchange (forex) market has what you desire--the potential to make sizeable profits and 24/7 accessibility. But to make it in today's forex market, you need more than a firm understanding of the tools and techniques of this discipline. You need the guidance of someone who has participated, and prevailed, in this type of fast-paced environment. Raghee Horner has successfully traded in the forex market for over a decade, and now, in *Thirty Days of Forex Trading*, she shares her experiences in this field by chronicling one full month of trading real money. First, Horner introduces you to the tools of the forex trade, and then she moves on to show you exactly what she does, day after day, to find potentially profitable opportunities in the forex market. Part

instructional guide, part trading journal, *Thirty Days of Forex Trading* will show you--through Horner's firsthand examples--how to enter the forex market with confidence and exit with profits.

The so-called 'Nestorian' Church (officially known as the Apostolic

Assyrian Church of the East, with its See in Baghdad) was one of the most significant Christian communities to develop east of the Roman Empire. In its heyday the Church had 8 million adherents and stretched from the Mediterranean to China. Christoph Baumer is one of the very few Westerners to have visited many of the most important Assyrian sites and has written the only comprehensive history of the Church, which now fights for survival in its country of origin, Iraq, and is almost forgotten in the West. He narrates its rich and colorful trajectory, from its apostolic beginnings to the present day, and discusses the

Church's theology, christology, and uniquely vigorous spirituality. He analyzes the Church's turbulent relationship with other Christian churches and its dialogue with neighboring world religions such as Zoroastrianism, Manichaeism, Islam, Buddhism, and Taoism. Richly illustrated with maps and over 150 full-color photographs, the book will be essential reading for those interested in a fascinating, but neglected Christian community which has profoundly shaped the history of civilization in both East and West.
