Jane Eyre, first  
published in 1847  
under the pseudonym  
Currer Bell, exploded  
into the English literary  
scene, capturing the  
hearts of many of the  
world's most prominent

writers, including William Makepeace Thackeray, who called it a work "of extraordinary brilliance." Brontë's masterpiece, widely recognised as a revolutionary novel, exposed the world to a radical new sort of heroine, one whose rebellious integrity and moral courage stood in stark contrast to the more acquiescent and malleable female heroines of the day. Jane Eyre is one of the world's most beloved novels because it is passionate, dramatic, and startlingly modern.

John Stuart Mill was a British philosopher, political economist and civil servant. He was an influential contributor to social

theory, political theory and political economy. He has been called "the most influential English-speaking philosopher of the nineteenth century". Mill's conception of liberty justified the freedom of the individual in opposition to unlimited state control. He was a proponent of utilitarianism, an ethical theory developed by Jeremy Bentham. Hoping to remedy the problems found in an inductive approach to science, such as confirmation bias, he clearly set forth the premises of falsifiability as the key component in the scientific method. Mill was also a Member of Parliament and an important figure in liberal political philosophy.

The Apostle Paul was

the greatest early missionary of the Christian gospel. He was also, by his own admission, an Israelite. How can both these realities coexist in one individual? This book argues that Paul viewed his mission to the Gentiles, in and of itself, as the primary expression of his Jewish identity. The concept of Israel's divine vocation is used to shed fresh light on a number of much-debated passages in Paul's letter to the Romans.

This book is open access and available on [www.bloomsburycollections.com](http://www.bloomsburycollections.com). It is funded by Knowledge Unlatched. Jewish and early Christian authors discussed Abraham in numerous and diverse ways, adapting his Old Testament narratives and using Abrahamic imagery in their works. However, while some areas of study in Abrahamic texts have received much scholarly attention, other areas remain nearly untouched. Beginning with a perspective on how Abraham was used within Jewish literature, this collection of essays follows the impact of Abraham

across biblical texts—including Pseudigraphic and Apocryphal texts – into early Greek, Latin and Gnostic literature. These essays build upon existing Abraham scholarship, by discussing Abraham in less explored areas such as rewritten scripture, Philo of Alexandria, Josephus, the Apostolic Fathers and contemporary Greek and Latin authors. Through the presentation of a more thorough outline of the impact of the figure and stories of Abraham, the contributors to this volume create a concise and complete idea of how his narrative was employed throughout the centuries, and how ancient authors adopted and adapted

received traditions. *Concentrate Questions and Answers Human Rights and Civil Liberties* Da Capo Press Here is an idea that just might save the world. It is that science, properly understood, provides us with the methodological key to the salvation of humanity. A version of this idea can be found in the works of Karl Popper. Famously, Popper argued that science cannot verify theories but can only refute them, and this is how science makes progress. Scientists are forced to think up something better, and it is this, according to Popper, that drives science forward. But Nicholas Maxwell finds a flaw in this line of argument. Physicists only ever accept

theories that are unified – theories that depict the same laws applying to the range of phenomena to which the theory applies – even though many other empirically more successful disunified theories are always available. This means that science makes a questionable assumption about the universe, namely that all disunified theories are false. Without some such presupposition as this, the whole empirical method of science breaks down. By proposing a new conception of scientific methodology, which can be applied to all worthwhile human endeavours with problematic aims, Maxwell argues for a revolution in academic inquiry to help

humanity make progress towards a better, more civilized and enlightened world.

This book answers key questions asked by emergency clinicians faced with complex gastrointestinal and abdominal pain presentations. Instead of a traditional format that includes epidemiology, pathophysiology, diagnosis, and treatment options, this book takes an approach that mirrors the way clinicians interact with patients – by asking and answering specific clinical care questions. The book is organized into sections by presentation – gastrointestinal bleeding, for example –

each of which contains chapters on specific questions, such as “What is the best clinical risk score for low risk GIB patients?” Each clinical question comes with a detailed, evidence-based response and a summary that gives best practices, recommendations, and references. Additionally, at the end of each section is a chapter titled “Expert Corner,” which asks the same clinical questions to a surgical or gastrointestinal specialist and includes key pearls these experts have for emergency medicine practitioners. *Gastrointestinal Emergencies: Evidence-Based Answers to Key Clinical Questions* is an essential guide for

emergency medicine physicians, residents, and medical students who want to review and improve their care of acute gastrointestinal emergencies. NICOMACHEAN ETHICS

Oxford University Press

An accessible and fun guide to the essential tools of econometric research Applied econometrics, known to aficionados as 'metrics, is the original data science. 'Metrics encompasses the statistical methods economists use to untangle cause and effect in human affairs. Through accessible discussion and with a dose of kung fu-themed humor, Mastering 'Metrics presents the essential tools of econometric research and demonstrates why econometrics is exciting and useful. The five most valuable econometric methods, or what the authors call the Furious Five--random assignment, regression,

instrumental variables, regression discontinuity designs, and differences in differences--are illustrated through well-crafted real-world examples (vetted for awesomeness by Kung Fu Panda's Jade Palace). Does health insurance make you healthier? Randomized experiments provide answers. Are expensive private colleges and selective public high schools better than more pedestrian institutions? Regression analysis and a regression discontinuity design reveal the surprising truth. When private banks teeter, and depositors take their money and run, should central banks step in to save them? Differences-in-differences analysis of

a Depression-era banking crisis offers a response. Could arresting O. J. Simpson have saved his ex-wife's life?

Instrumental variables methods instruct law enforcement authorities in how best to respond to domestic abuse. Wielding econometric tools with skill and confidence, *Mastering 'Metrics* uses data and statistics to illuminate the path from cause to effect. Shows why econometrics is important Explains econometric research through humorous and accessible discussion Outlines empirical methods central to modern econometric practice Works through interesting and relevant real-world examples

Utilitarianism  
Houghton Mifflin Harcourt  
◆ EVERY art and every inquiry, and similarly every action and pursuit, is thought to

aim at some good; and for this reason the good has rightly been declared to be that at which all things aim. But a certain difference is found among ends; some are activities, others are products apart from the activities that produce them. Where there are ends apart from the actions, it is the nature of the products to be better than the activities. Now, as there are many actions, arts, and sciences, their ends also are many; the end of the medical art is health, that of shipbuilding a vessel, that of strategy victory, that of economics wealth. But where such arts fall under a single capacity- as bridle-making and the other arts concerned with the equipment of

horses fall under the art of riding, and this and every military action under strategy, in the same way other arts fall under yet others- in all of these the ends of the master arts are to be preferred to all the subordinate ends; for it is for the sake of the former that the latter are pursued. It makes no difference whether the activities themselves are the ends of the actions, or something else apart from the activities, as in the case of the sciences just mentioned. ♦
